Storage and cataloguing done by FU Berlin

The book is dedicated to  
Margaret Osi, the most brilliant speaker of Kilmeri,  
the greater Osi family,  
the Kilmeri people on their way between tradition and  
modern life.

# Preface

The present collection of Kilmeri texts arose in parallel with the work on my Kilmeri grammar (Gerstner-Link 2018). From the very beginning of the fieldwork, texts were as important for me as grammatical issues of the language; being a researcher who holds a holistic view on language it seemed inconceivable for me to produce a grammar which wouldn't be based on a broad collection of running text. Special grammatical details can be – and must be – obtained by elicitation, but the overall character of a language manifests itself in texts of different genres. Unfortunately, grammars usually include only a few texts in an appendix, while most texts of the language in question are not publicly accessible. My own grammar also follows this practice; and, what is more, the glossed texts are somehow “hidden” in the Online Supplement of the grammar. Therefore the OTC project of the *Berlin-Brandenburgische Akademie der Wissenschaften* is a most welcome opportunity to finally publish all the Kilmeri texts that I could collect during my fieldwork.

In addition to texts that are related to Kilmeri heritage, my consultants and I worked on a partial translation of the gospel of Mark. They were highly engaged in this endeavour, which would honor their language in that it would prove their “bush” vernacular to be a language on the same level as English. The translation would show the ability of Kilmeri to put into words and express the texts of the Bible.

Regrettably, the present collection does not include those texts due to the constraint the publishers needed to observe to publish only *original* texts of a language community. It is true that translated texts don't belong to the literary and cultural heritage of a people, but attest influence from outside. They certainly bring a foreign note to the inner coherence of narrative topics of an indigenous community. However, there is always an unavoidable break of tradition as soon as outsiders – be it missionaries, traders, hunters, or linguists – enter a community. For instance, when my consultant Susan Bisam traveled with her husband, a crocodile hunter from the Sepik, to the area south of the Bewani mountains, she acquired some knowledge of the culture there and brought it to the Kilmeri area. These traits can be seen in one of her stories that she told in Tok Pisin. With the arrival of “modern life” a new genre of text emerges that can be called

## *Preface*

“narratives situated in contemporary time and life.” Texts of this type form one chapter of the present collection, and they certainly widen the narrative ability of their narrators and show their eagerness to tell the stories in question.

My fieldwork on Kilmeri (Border language family, northwestern Papua New Guinea) spread over seven years starting in November 1999 and ending in February 2007. During this time I spent about 15 months in the field. The first preliminary version of the glossed texts was finished in 2010. Subsequently, glosses and translations were continuously adapted and adjusted in parallel with the writing of the grammar. For this publication, all texts have been reviewed and, where necessary, revised in order to integrate a different perspective on the best translation of sentences or phrases. I am also finalising my Kilmeri dictionary (to be published in the “Dictionaria” series), which brings to light meanings of words that I was previously unaware of; such new findings have also been taken into account. The collection contains the six texts of the online supplement to my Kilmeri grammar. These texts were also revised and, in some cases, expanded when an (unintended) gap was found in the original transcription.

# Acknowledgments

My first thanks go to the project team of the OTC Project, Sebastian Nordhoff, Christian Döhler and Mandana Seyfeddinipur, for inviting me to contribute to this project, which provides a substantial extension of language documentation beyond grammars and dictionaries. OTC editor in chief is Christian Döhler, and the project is based at the *Berlin-Brandenburgische Akademie der Wissenschaften*. Döhler is also regional editor of the Papuan section of OTC. So I owe greatest thanks to him: for his technical support, for his stylistic suggestions, for his editing ideas, and for generosity and enthusiasm during my work on the manuscript. His OTC volume “Speaking the map. Komnzo texts” (Döhler 2024) was a fine guide for my reflections and comments on the Kilmeri narratives. I also thank two anonymous referees whose careful comments helped to considerably improve the text. Finally, I thank Matthew Korte for his meticulous proofreading.

The preliminary version of the text collection dates back to the year 2010, and here I want to thank Inken Kaumann M.A. for her patient and probing help in compiling the texts. This work took place within my DFG project “Duale Grammatikographie: semasiologische und onomasiologische Analyse ereignis- und raumbezogener Konstruktionen in Kilmeri”<sup>1</sup> under the supervision of Ulrike Mosel.

The narrators to whom I owe the texts are introduced in Chapter 3 below. They were always eager to contribute stories belonging to their heritage as well as those of their current life. Many photos supplemented my fieldwork. Some of them are included here, and the narrators would feel honoured by that. But meanwhile, about 20 years after the fieldwork, they have deceased as all of them belonged to the oldest generation. I regard the narrators as my colleagues in entrenched linguistic knowledge. My greatest thanks go to them. For me, they are a model in the wisdom of heritage.

Last but not least, I deeply thank my husband Godehard Link who accompanied my research and publications on Kilmeri for decades with untiring interest, encouragement, and love.

---

<sup>1</sup>GZ: MO728/7-1,2; AOBJ: 529555: September 2006 – August 2009, cost-neutral extended until October 2010.

# Abbreviations

The glossing conventions follow the Leipzig Glossing Rules.<sup>1</sup> Categorial abbreviations not found in the Leipzig Glossing Rules are my own. For explanations of categories that may seem rather idiosyncratic, I refer the reader to my grammar of Kilmeri (Gerstner-Link 2018).

Circumfixes are written as AFF- ... -AFF in the gloss line. Multi-word lexemes in Kilmeri, such as serial verbs or collocations, are written with an underscore on the morpheme line when their components need to be spelled out. Serial verbs are indicated by the notation V\_V(\_V). Collocations are indicated by the notation N\_N or N\_V. Multi-word translations in the gloss line are separated by full stops.

All pronouns receive a lexical gloss if they occur by themselves, e.g. *ko* 'I' and *de* 'you.sg'. If they are affixed, they are glossed with an abbreviation (1SG and 2SG, respectively), as in *yip ko-pi-yo* [house 1SG-POSS-LOC] 'at my house'.

Tok Pisin insertions are marked with (TP) after the respective item in the gloss line. Tok Pisin words that are loanwords, however, are not marked in this way, as they are part of the contemporary Kilmeri lexicon.

Finally, translations of lexical items are glossed according to context, i.e. for some Kilmeri words the lexical gloss may differ because the Kilmeri word has several meanings.

All abbreviations used in this text collection are given below:

	syncretism (e.g. A s)	ANIM	animate
1	first person	ANT	anterior
2	second person	APH	anaphor
3	third person	AUG	augmentative
A	agent/transitive subject	CO	connective
ACCOM	accompaniment	COLL	collective
ADJ	adjective	CON	conative
ADV	adverbial	CPL	completive
AFF	affinitative	DEIC	deictic

## Part I

# Background

# 1 Introduction

## 1.1 The Kilmeri people

The Kilmeri people live in the area south of Vanimo (Sandaun province) and south of the eastern table mountains of the Oenake range, which are up to 800 metres high (Figure 1.1). From the village of Ossima – the place where the field-work took place over the years – you have a beautiful view of these table mountains, which look like real landmarks. They constitute the northern boundary of the Kilmeri area and settlements. These settlements are located in the basin of the Puwani and Pual rivers; the headwaters of the Pual originate in the west, while the headwaters of the Puwani originate on the northern slopes of the Bewani Mountains, which rise above 1500 metres on the Papua New Guinea side of the international border with Indonesia (See the sketch of the villages in Figure 1.2). Nowadays there is a gravel road from the coast and the provincial capital of Vanimo to the administrative centre of Bewani at the foot of the Bewani range. Almost all villages of the Kilmeri people are located east of this road. Only Ilup, the most remote village, is situated west of the road, and Sosi, the northernmost village, is situated directly along this road. It can therefore be said that the settlements form a contiguous area. In 1990, when a population census was carried out, the Kilmeri had a population of around 2,500 in 15 villages (cf. Section 1.3).

### 1.1.1 Horticultural subsistence

As in the past, horticultural subsistence is a strong economic pillar of the Kilmeri. Close to the villages and hamlets, people create their gardens by slash-and-burn. There are usually several gardens: one or two gardens are more or less ready for harvesting, one is newly planted and one is in the preparation phase. Bananas are often planted also in a plot right next to the house (cf. Text G.20). The most important crops include the following species: sago (*Metroxylon sagu*) as primary staple food, banana (*Musa*) as secondary staple food; taro (*Colocasia*), breadfruit (*Artocarpus*), and sweet potatoes (*Ipomea batatas*) as valued supplements. These sources of starch are accompanied by greens and coconuts: *aibika* (*Abelmoschus manihot*), *tulip* (*Gnetum gnemon*), and coconut (*Cocos nucifera*).

## 1 Introduction

Figure 1.1: Table mountains of the Oenake range in twilight

Horticulture is accompanied by the gathering of food from the bush, which is equally important to ensure a healthy, sustainable diet. Women collect wild greens and mushrooms on a daily basis. Women also look for nests of wild fowls, cassowaries, and others birds that breed on the ground. When gathering eggs, they tend to empty the nests (cf. Text F.6). As a result, breeding cycles are interrupted and the number of birds declines in the long term. Women and children also catch small fish in ponds that are hidden in the bush. The size of the fish that I saw was about 15 - 30cm in length. It is not known to me which varieties of freshwater fish live in these small ponds. Furthermore, small frogs were collected after it had rained. After a heavy rainfall frogs appear in large numbers and a bucket fills quickly (cf. Text A.6). I myself once saw a bucket with dozens of small yellow-greenish frogs, which the family soon started to roast in the fire for a meal. Moreover, frogs and geckos often rest in the deep ribs of sago palms and can be caught by climbing palm trees (cf. Text C.3). In freshwater streams, men and children collect crabs, which are another small animal food source. Shrimps are a delicious but rare addition to meals. Seasonal bush foods are various nuts and fruits gathered by groups of children. The fruits of the *ton* tree (*Pometia pinata*) are particularly valued. They are a bit akin to rambutan fruits and lychee fruits.<sup>1</sup>

---

<sup>1</sup>The species *Pometia* belongs to the same family *Sapindaceae* as rambutan and lychee trees.

## 1.1 The Kilmeri people

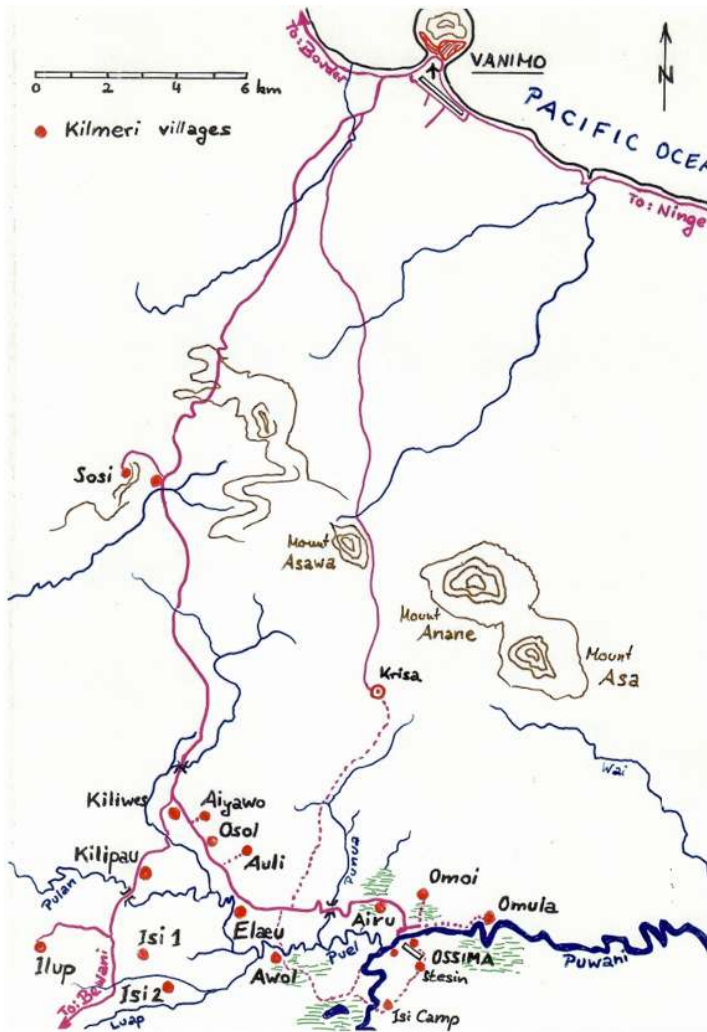

Figure 1.2: Map of the Kilmeri speaking villages by Godehard Link

Cultivating sago grubs is done by all families who have access to sago swamps or other places where palms grow that feed grubs (cf. Text B.1). The production of sago grubs is part of the sago business: It supplies the protein, while the sago pith provides the starch. A typical meal consists of sago jelly, *tulip* vegetable or *aibika* vegetable cooked in the milk of grated copra. Mushrooms, sago grubs, or some meat are also served, depending on availability (cf. Text C.2, C.3, F.8, F.11).

## 1 Introduction

Hunting animals used to be the traditional task of men: wild pigs, ground kangaroos, tree kangaroos, possums, and cassowaries were hunted. Once in a while, someone spotted a deer, and then everyone was eager to get it. But success was rare, as I experienced it in the field. Bandicoots could be caught by hand (Text G.13) when a piece of overgrown garden was cleared. The story *Ai kopi basuiko* (Text C.1) is a good example of the former abundance of forest animals. But the story can also point to the danger of excessive hunting (cf. Text B.3 and G.12). In addition, (pregnant) female animals all too often become prey (Text C.7; p.c. Anita Osi as a sad comment on sharing the meat of a kangaroo with me, in whose pouch there was a young animal). Hunting was supplemented by semi-domesticated pigs, i.e. young wild boars were caught and fed (Text E.5).

### 1.1.2 Cash economy

Nowadays, garden crops and sago are often produced beyond subsistence and sold for money at markets. In Ossima there was and still is the Sunday market, which flourishes after the weekly Sunday service. Women from the neighbouring settlements come to this market to earn some money. Customers include the school's teachers and the parish with its staff, as well as guest families like me and my family. But the villagers would also buy goods that they currently lack. Quite a few people produce for the big markets in Vanimo and Dasi. Demand is high, especially for sago flour, as the squatters in Osi Camp (on the outskirts of Vanimo) have no access to the local sago swamps near the coast. The local sago palm grounds belong to the people of the coastal villages.

The establishment of the Catholic mission in Ossima in 1961 was accompanied by a cattle breeding project. Gradually, many people became cattle owners. The mission farm ran a small abattoir where the cows were slaughtered in order to bring the meat to the supermarkets in Vanimo. This provided some income for several families. The mission's cattle, pig, and vegetable farm also provided paid work. For about thirty years, this was a valued opportunity for young men to receive some education in agriculture. At the beginning of the 1990s, however, the farm gradually began to decline. When I arrived in Ossima, it was still in operation, but its heyday was over. By 2024, the farm business is almost at an end.

Another source of income are the royalties from the logging concessions. The primary forest of the entire Kilmeri area was certified for logging, and the logging company designated six so-called blocks, which were logged one after the other (Gerstner-Link 2018: 9-11). The valuable trees were cut down with chain-saws and moved with huge bulldozers. I witnessed this myself and even had the

opportunity to fly over an area where the trees had been dislodged. At times, one could hear from my house the sound of a huge tree falling over. Logging also offered young men paid jobs, but often at the cost of serious injuries due to a lack of safety measures.

In 2010 the company “Bewani Oil Palm Plantations Limited” started their palm oil business in the Kilmeri and East Pagi areas. For this purpose, a road was built from Vanimo to Imbio/Imbinis, a half-day’s walk east of the Kilmeri villages. The road follows the coast and crosses the Puwani River at its mouth into the sea; previously the Puwani had been an obstacle to industrial development. The former road to Ossima ended on the north side of the river and one had to cross it on foot or by boat/canoe to reach Ossima and the mission, including the school there. The BOPPL oil plantation also offers paid jobs. After remaining in isolation, a new centre is now developing around the plantation in the East Pagi area.

Last but not least, some descendants of the old Kilmeri have also settled in Vanimo. Over the years, the provincial capital offered more and more job opportunities. Simultaneously, the Kilmeri youth had received the necessary education to work in town. So there is a certain backflow of money from the town to the villages.

## 1.2 Clan lands

The Puwani-Pual basin is not the old homeland of the Kilmeri. There is good evidence that they migrated into this area from the west along the Bewani river valley. Their homeland was probably the area south-west of the Sentani Lakes on the other side of the state border with Indonesia, which more or less borders on the territory of the Nimboran people and the Nimboran language family. This hypothesis is outlined and linguistically argued for in (Gerstner-Link 2023). It corresponds to the genealogical memory of the Kilmeri, who count their generations back to their shared ancestor Si who is said to have come to the area from outside and claimed the land. Margaret Osi from Ossima and Usi Kul from Omoi are aware of this oral history. The sons of Si are Bu and Nakei, who are the ancestors of the people of Ossima and Omoi, respectively. They lived nine generations back, calculated from the year 2000. These genealogical memories are identity-forming.

Near the eastern Kilmeri villages there are (or were) several remarkable old Kwila trees (*Intsia bijuga*) that are considered ancestral heritage. These trees have names that relate to the ancestors. For example, near Oiru there was a tree called *Isimu*, which is said to have been named by Si. It burned down in 1999; its interior

## 1 Introduction

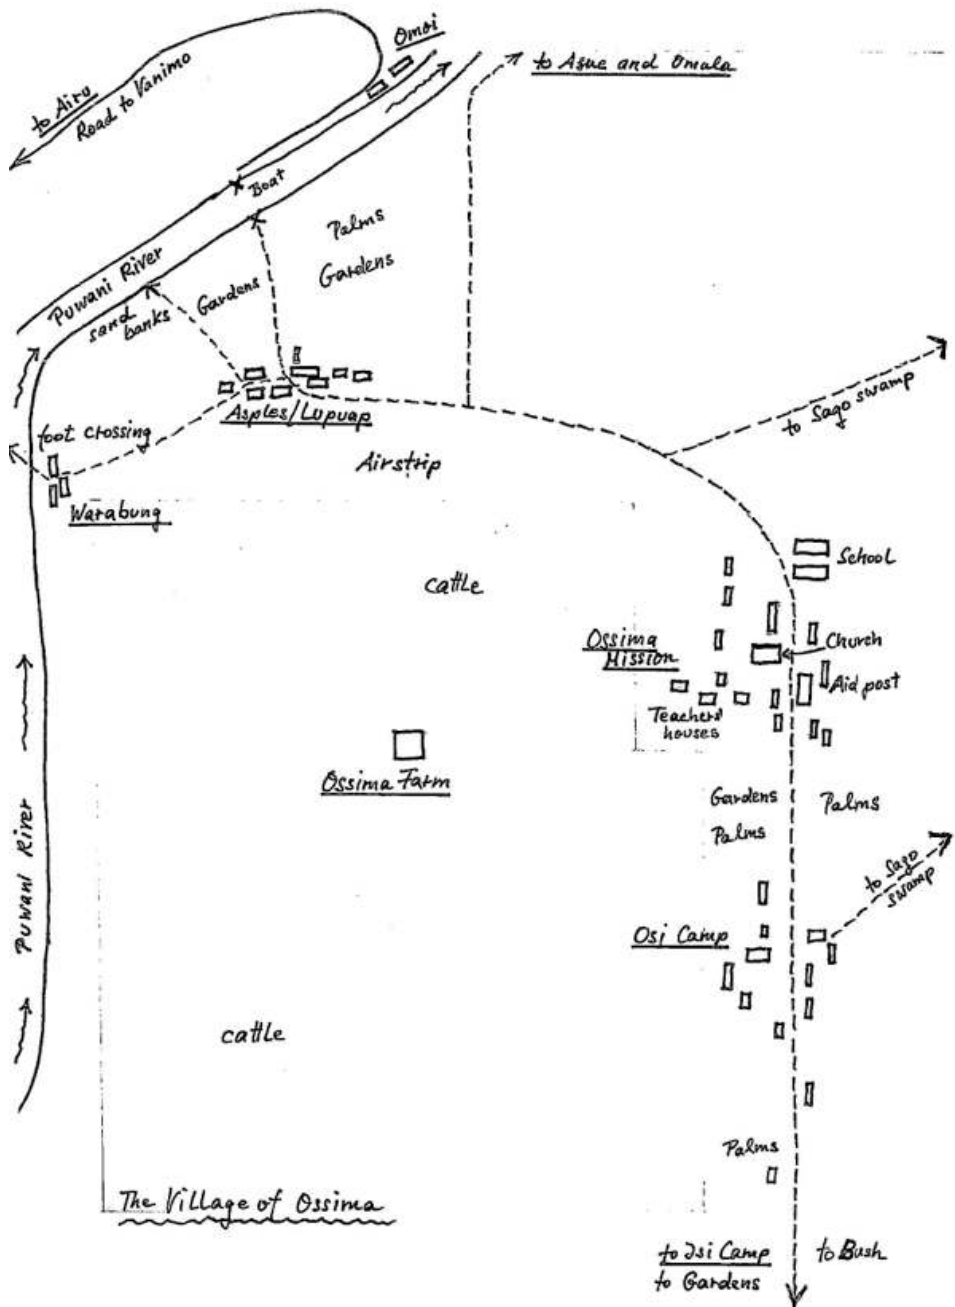

Figure 1.3: Map of Ossima village by Godehard Link

had completely dried out. Near Ossima stood a Kwila tree called *Ppaimu*, which was sacrificed for the construction of the “highway” – a dirt road roughly north of the Pual River from Kiliwes to the eastern villages – although many people wanted to preserve it. The Kwila tree *Ploumu* close to Omoi is still standing. Near Omula, the easternmost village, there was another tree called *Noumu*. It toppled over because of a landslide. Finally, on top of the hill Oimu located between Oiru and Omoi a Kwila tree named *Mu* rises. Note that *Mu* is a phonetic variant of *Bu*, emerging from prenasalisation of the plosive. In fact, all these tree names contain the syllable *mu*, which refers to the ancestor Bu. One of the Kwilas even contains the names of both ancestors, Si and Mu/Bu, namely the tree *Isimu*. According to Margaret Osi the name bearing Kwila trees are a certain subtype of *Intsia bijuga*: The Kilmeri name for this species is *ri maro* ‘tree maro’, but a slightly different type of *Intsia bijuga* is called *ri mu* ‘tree of Bu’. The labelling of certain trees with the names of distant ancestors is a means of preserving clan history and securing land claims. These trees can reach an age of more than 200 years, so it is possible that the aforementioned trees were planted by the aforementioned ancestors and have been revered for generations and centuries.

The names of the clans that occur in the area also provide a good clue to the population and settlement history of the Puwani-Pual basin. The clan names are linked to the clan settlements, but today’s villages and hamlets have different names from the clan names. Table 1.1 presents a list of ancient clan names found in the Puwani-Pual Basin, together with their administrative equivalents as found on official maps (Australia. Army. Royal Australian Survey Corps 1969: Sheet 7192). When asked where they live, people name their village with the (new) administrative names.

I would also like to mention that *kili*, which appears in several clan and village names, is a Kilmeri word meaning ‘bone’.<sup>2</sup> In addition to those clan names

---

<sup>2</sup>The name *Kilimeri* is not a village name nowadays. Its components, *kili* ‘bone’ and *meri*, can shed light on its origin. The component *meri* relates to Nimboran *méndy* ‘mouth’ or *mendú* ‘skull’. The sound correspondence /nd/ <> /r/ is regular and attested within the Border family as well as between Kilmeri and non-Border languages (cf. Gerstner-Link 2023). In Nimboran society *méndy* was a gift that the parents of a newly married woman received from the husband’s family after the birth the first child, thus, acknowledging her fertility (Kouwenhoven 1956: 25). The naming of a new settlement with a phrase meaning ‘bones (for the) mouth’ points to the fact that there was plenty of game which would secure the livelihood and fertility of the people living there. Moreover, there is the story of the hero Sakou, who throws out bones and seeds, thus providing the people with an abundance of game and crops (cf. Text A.3). The village name *Kiliwes* consists of the words *kili* ‘bone’ and *wís* ‘moon’. The moon is also a reference to hunting, as the great hunts in the forests used to take place during the full moon phase (cf. Text B.7, Sequence (27)).

## 1 Introduction

Table 1.1: Correspondence of clan names and settlements

CLAN	VILLAGE NAMES	COMMENT
<i>Ilá</i>	Kilmeri, Kiliwes, Ossima	Ossima village proper
<i>Ilup</i>	Anau	
<i>Imar</i>	Ossima	Greater area of Ossima around the village proper
<i>Imiri</i>	Osol	
<i>Ipies</i>	Airu/Oiru	The name of the village comes from two phonetic varieties
<i>Irer</i>	Omoi	
<i>Isa</i>	Krisa	The inhabitants of Krisa speak the Sko language Isaka
<i>Isep</i>	Kilipau	
<i>Isi</i>	Isi I, Isi II, Esau/Olul	The third village is known under two names
<i>Isipi</i>	Omula	
<i>Iulep</i>	Awol	
<i>Iwes</i>	Kiliwes	

that correlate with settlements, there are further clans with similar names in the region: Iles, Imo I, Imo II, Imo III, Imo IV, Imop, Inuges, Ipualu, Iu, Iuwi, Iwom, and Iwopai.<sup>3</sup>

Evidently, all the clan names listed here begin with the vowel /i/, which is by far the most common in the Kilmeri lexicon (Gerstner-Link 2018: 63). Since \*i- is the class marker of flying animals, i.e., birds and bats (Gerstner-Link 2018: 647), one could speculate that animals of these groups might have had a special spiritual function for the clans. Furthermore, in Nimboran the word for bird is *iy* (Anceaux 1965: 14). Probably it is not too far-fetched to think of a transfer relation, which would have been possible in either direction (cf. Gerstner-Link 2018: 654, 2023). However, there are also clan names that do not begin with the vowel /i/, but have completely different phonological forms. The ratio of documented clan names appears to be roughly half /i/-initial names and half other names.

<sup>3</sup>Kouwenhoven (1956: 27) states about Nimboran clans – which are called “tang” – that a clan or “tang” subdivides when it has exceeded a certain size. The same seems to hold in Kilmeri society, an example being the Imo clan, which now has four divisions.

Figure 1.4: Puwani River

## 1.3 Language vitality and literacy

### 1.3.1 speakers and fluency

In the beginning of the 1990s, the Kilmeri comprised around 2,200 people in 15 Kilmeri-speaking villages (Nekitel 1998: 107, based on Grimes 1990). The National Population Census of 1990 states a population of 3,607,954 people for Papua New Guinea minus the North Solomon Province (Nekitel 1998: 81).<sup>4</sup> According to the National Statistical Office, the population of Papua New Guinea reached 7,275,324 in 2011, and 11,781,559 in 2021.<sup>5</sup> If we take the national census as a guide, with an average annual population growth of 3.81 per cent between 1990 and 2021, and apply this to the population of Kilmeri in 1990, which was 2,200, then by 2021 the population would be around 7,000. From my own experience, I can add that I met several families in Ossima who had around seven to ten children.<sup>6</sup>

<sup>4</sup>This census is also mentioned on the website of the National Statistical Office, but without numbers.

<sup>5</sup>Cf. <https://www.nso.gov.pg/statistics/population/>

<sup>6</sup>Margaret Osi told me that in the past, when the men's house still existed, women had no more than four children. Only when a child was about the age of four the next pregnancy was agreed on. Albert Maori Kiki says that in his mother's group of the Elema people at the Purari River (Gulf Province) women were supposed to have only two children (Kiki 1969: 30). Apparently, in traditional times, birth control was a behaviour that was accepted as it was considered to balance the life and the resources of people.

## *1 Introduction*

Most likely, the 15 Kilmeri-speaking villages would still be referred to as “Kilmeri speaking” by the people themselves, as the language is identity-forming to a certain extent. However, the number of fluent speakers has decreased considerably. The last generation, who spoke Kilmeri fluently as their only or dominant language, are no longer alive. The middle generation, born in the 1960s, 1970s and 1980s, grew up speaking Kilmeri but switched to Tok Pisin in large numbers. They used Kilmeri only to talk to the older people. This generation has a reasonably good command of the language. The younger generation has grown up bilingual and has mostly heard (some) Kilmeri from the adults, while speaking Tok Pisin. Many of them have Tok Pisin as their first language. It should also be noted that the middle generation often married spouses from outside the Kilmeri community. To give an example: Lis Osi had seven children, and three of them are married to non-Kilmeri partners: one son is married to a woman from Popondetta (Oro province; they live in Port Moresby); another son is married to a woman from Vanimo Lido; another daughter is married to a man from Krisa. This pattern of mixed marriages continues in the younger generation. Furthermore, this can certainly be generalised to other families. For the vernacular Kilmeri, this marriage pattern breaks with the tradition and has the dire consequence that the language quickly loses ground. The common language within the family is often Tok Pisin and is therefore intruding all situations. In addition to what has been said, many Kilmeri families squat in Ossima Camp located in the outskirts of Vanimo. Almost every large family has such a base in the city to stay overnight on business or just “to be in town.” The language of Vanimo is of course Tok Pisin.

My impression is that Kilmeri can no longer be described as a living language. I do not have exact figures on speakers and their language proficiency, but the overall picture is not encouraging. Even if the language is used in daily life by a few families in about a third of the Kilmeri villages, this situation does not guarantee the language will survive. Yes, some sentences and words will survive, produced now and then as short utterances with simplified grammar. But unfortunately this is not the language that I analysed in my grammar (Gerstner-Link 2018) and that can be found in the stories in this collection.

### **1.3.2 Literacy and Language Shift**

Until the 1960s the Kilmeri speaking community fostered their oral language tradition in daily and ceremonial life without being literate. Western education with schools and literacy training was first introduced by the Catholic Mission, which soon founded a school in Ossima. In 1971 Grade 1-6 were in operation; the school

had an enrolment of 200 children with boarding facilities for 180 children.<sup>7</sup> The language of instruction was English. Those children were the first generation to become literate. The older generation, born in the 1940s and 1950s, has remained largely illiterate. However, literacy was slow to spread and even in the 1990s not all children went to school regularly. Often the children were already 8 to 10 years old when they started school, and some left school after the fourth grade. The most successful students went on to high school and could choose between the high schools in Vanimo, Lumi, Green River and Aitape, which are all boarding schools with grades 7-10. In addition, Aitape Secondary School also offers grades 11 and 12.

Although the official language of instruction remained English after independence in 1975, Tok Pisin became the *de facto* language of schooling. This is also due to the fact that many teachers in the Vanimo-Bewani region and throughout the province come from other parts of the country and their common language is Tok Pisin. Even the local teachers are often not fluent in their local language.<sup>8</sup> This means that the indigenous Kilmeri language is not supported at school. As a consequence, the younger generation has become more and more convinced that the local language is of no practical use of them. It will not contribute to a livelihood better than the subsistence farming practised in the villages. I myself have heard this judgement several times.

One should also mention that the language favoured by the mission staff is Tok Pisin. Hardly anyone took up the challenge of learning Kilmeri, apart from a few phrases or short songs. The liturgic texts were all in Tok Pisin, including the Bible translation. The High Holidays were celebrated with annual biblical performances, the Passion Plays and the Christmas Plays, in which many people from the villages took part. These performances were held in Tok Pisin. Church life was based on Tok Pisin from the very beginning and is still based on this language today.

This is the background to the language shift of the Kilmeri people who received education in Ossima mission and became members of the church. In the villages surrounding the mission people shifted to Tok Pisin, and it was not only used as a *lingua franca*, but also within families. In Osi Camp, for example, the household language was already Tok Pisin, when I arrived in November 1999. We found the same situation in Ossima Asples, Omoi and Airu. The village of Awol, on the other hand, was more remote and only accessible on foot, so Kilmeri was not pushed out as much. My daughter had a schoolmate from Awol who visited us

<sup>8</sup>Cf. (Sandaun Provincial Government 2007: 19)

## 1 Introduction

at home. To some degree, she grew up speaking Kilmeri, as her family spoke the language at home.

When reading a chapter of Otto Nekitel's book "Voices of yesterday, today and tomorrow" one repeatedly comes across the linguistic scenario that would feed the society of Papua New Guinea best (1998: 46-61; 78-90; 169-182). Clearly, a country needs a common lingua franca that can be used at all levels of private and public communication. This would be Tok Pisin. Secondly, the vernacular languages should not be banned, neither by individuals nor by groups of people. Ideally, the family would communicate in the parents' vernacular – or maybe two vernaculars in the case of mixed marriages – and the children would retain their mother's language even if leaving their home for higher education. That could result in a widespread creative bilingualism that preserves the old culture and meets the necessities of modern life and mobility. English as a possible third language would serve academic communication. At least in theory, language shift and language preservation are not mutually exclusive.

The secular cultural change also led to the abandonment of the indigenous language. (i) Film screenings: During my last field visits in 2006 and 2007, public film screenings were organised in Ossima for evening entertainment. A medium-sized screen was set up on someone's plot of land, and the audience – around 20-30 people – sat in front of it on the ground or on seats made from felled coconut palms. The adults watched American, Indian, or Chinese blockbusters, and the children watched Chinese cartoons. I did not witness the introduction of smartphones. Perhaps film watching has now become a form of private, individual entertainment. (ii) Dancing: Traditional dancing has disappeared entirely. Instead, dancing now takes the form of *banis*, which is a Tok Pisin term for 'a fenced-off place where people dance to Western music'. Several *banis*-grounds were set up during my time of field research. *Banis* is a popular weekend entertainment from Friday night to Sunday morning. The dancing usually starts in the evening and goes on until morning, and people rest during the following day. *Banis* is commercialised and people have to pay an admission fee. The owner of the *banis* site earns a good income despite his expenses for loudspeakers and other technical equipment.

Against this background, records of oral traditions are crucial to the ethnographic understanding of peoples worldwide. In the Kilmeri region, the people who "own" stories will be gone in the very near future. Margaret Osi, for example, celebrates her 82nd birthday in 2024, and my landlord Jeffrey Osi, who certainly knows a few old stories, is now in his sixties. It is not certain whether he succeeded in passing on "his" ancestral stories to the next generation.

## 2 The topics of the narratives

The texts of this collection are grouped into seven topical chapters. The first four chapters and their texts describe the traditional life of the Kilmeri people. They address clan history, ancestral stories, and traditional activities and experiences. The following three chapters describe contemporary village life, including events I have witnessed in around half of the stories.

The texts go back to the inhabitants of four villages or hamlets, namely the settlements of Ossima, Isi Camp, Omoi and Awol. The village of Ossima consists of three settlements, namely Ossima Asples at the Puwani river, Ossima Station, and Osi Camp. Ossima station consists of the houses of the mission staff, the houses of the school teachers, the community buildings, the school, the church and a few private houses. However, most of the people from Lis Osi's lineage live in Osi Camp, about 300 metres away, where I also had my house. This settlement consisted of five families at the time of the field research, but more houses may have been added, as the descendants of Jeffrey Osi have since founded their own families. Ossima Asples is the settlement of the Bisam lineage of the Imo clan. It consists of about ten houses with six to eight families, including the families of Susan Bisam and Andrew Wapi, two knowledgeable storytellers. Some people live apart from Ossima Asples on the ridge above the river towards Asue, in poorly built houses. Isi Camp is a small settlement of about five families (and some more houses) who came here some years ago from one of the Isi villages located further west near the Bewani road that connects the administrative centre of Bewani with the capital of Vanimo at the coast. The people of Isi Camp belong to the greater Imo clan and are thus entitled to live on that strip of land near Ossima. Like the Ossima people they are cattle owners.

The village of Omoi lies north of the Puwani River opposite Ossima Asples and stretches along the river, but a second settlement lies uphill, about 15 minutes' walk from the river. This is where the storytellers Usi Kul and Brigitte Esau had their houses. The village of Awol is located on a ridge above a large sago stand south of the Pual River and west of the Puwani River. Sei Walup, who "owned" one of the stories of the clan history, lived there. Some inhabitants of Awol settled in Warabung, the confluence of the Puwani and Pual rivers, but no one from there was involved in the language documentation.

## 2 *The topics of the narratives*

Seven people have contributed to this text collection, and as they come from different villages and different “microcultures,” the collection covers more than one narrative perspective and narrative heritage within the Kilmeri community.

### 2.1 **Ancestral stories**

There is no vernacular Kilmeri word for this genre. Although everyone knows exactly what kind of story is meant, they always refer to it with the Tok Pisin term *stori tumbuna*, which means ‘stories of our ancestors’. Sometimes the opening formula of a story contains names of family members or a clan. All texts relate to characters rather than to an abstract literary concept, which may nevertheless exist implicitly.

Many of the ancestral stories are about bush spirits. In fact, the bush spirits are the main protagonists, and without them these stories would not have become a piece of oral history and collective identity. For the Kilmeri, I think, the world of the bush spirits forms a parallel world to that of humans. At least the stories are crafted in this way. The abstract structure is as follows: (1) One or sometimes two people leave the settlement and go into the bush or to a river to find food. (2) At this place, a bush spirit appears, which takes the form of a human or an animal. (3a) If it is a female, the bush spirit seduces her to follow it or (3b) if it is a man, the bush spirit kills him on the spot. (4) In revenge, the bush spirit is trapped in its house and killed by the people there.

In general, the bush spirit can change its appearance freely between an animal and a human being. If it takes a human by surprise outside the settlement, it can appear as a snake, goanna, crocodile, turtle or cassowary. In contrast, a bush spirit never appears as a pig, wallaby, possum or bandicoot. This means that mammals and marsupials are excluded from entering the world of bush spirits as agents of evil. This can be understood in terms of an animal hierarchy in the narrative structure.

The habitat of bush spirits is usually underwater, as they are thought to live at the bottom of bodies of water. This becomes evident in the stories when the people set off to take revenge, and visit the bush spirit at its home. It is usually a house, built in exactly the same way as human houses, with doors and ladders (Text B.3, Sequence 13) and a roof (Text A.6, Sequence 10). The bush spirit’s house is equipped with the very same utensils that humans need to live (Text B.2, Sequence 36).

The human characters of these stories usually remain unnamed. Instead, they are described as “a couple,” “two sisters,” “two brothers,” or as “father and son.”

It is obvious that the protagonists represent stereotypical social pairings and are not individualised. This is mirrored in people's preference for addressing each other with the appropriate kin terms. I also observed the avoidance of personal names during my fieldwork. My husband, for example, was always called *poro* 'friend' by our Kilmeri friend and landlord Jeffrey Osi. Children, on the other hand, were often addressed by their names, preferably by their Kilmeri names. In the ancestral stories, only a few characters bear names, namely the man Kopukei in Text B.1, the man Wau in Text B.12, the man Bipep in Text B.3, and the girl Kusudua and the bush spirit Mawatkawi in Text B.5. The individualisation of a bush spirit through a personal name is interesting, but this topic was not pursued further. In a few texts friendly spirits appear, for example in Text A.6 and Text B.10. They reside at the bottom of bodies of water, just like the evil spirits (or *masalai* in Tok Pisin). It seems that they appear in human form, but one should be cautious as the narrative data on friendly spirits is sparse.

In addition to evening entertainment, the stories have two further functions. Firstly, they have the educational aim of warning people about the dangers of the bush. Although in most stories two people set off together to find hunting animals, one of them usually falls victim to the bush spirit. So even two pairs of eyes cannot withstand the challenges of the bush. Secondly, the stories describe the consequences of social misbehaviour within the family; in particular, they describe the fact that some male members are too greedy and unwilling to share food with others, be it with their younger brother or with their wife, as in the Texts B.3 and B.5. These disadvantaged family members then fall prey to the bush spirit because they wander off alone to find food in the bush.

## 2.2 Old village life

Five texts in this chapter recall Margaret Osi's experiences and memories of her life as a child and young woman. Some are more narrative in nature, others could also be classified as procedural texts, in particular Text C.4 about constructing a new family home after the old house had fallen into disrepair.<sup>1</sup>

In all cases, it was Margaret's expressed wish to represent an integral part of her earlier life as well as the earlier life of her people. Compare the two texts that deal with the death of a person. Text C.1 about Margaret's father Apai ends with a

---

<sup>1</sup>Barry Craig (South Australian Museum) undertook a survey of housing in central New Guinea to be found under (Craig 2018). His description and photos give a valuable impression of types of house and house building back in the 1960s. The description of Margaret Osi matches Craig's findings in the Upper Sepik area in many aspects.

## *2 The topics of the narratives*

(more or less) Christian burial, whereas Text C.5 describes the traditional burning ritual performed in the bush after a person's death. The ritual of mourning and exchanging gifts is not mentioned in the texts, although this custom is still alive. It was still practised at the time of my field research.

Two other stories in the chapter were told by Andrew Wapi, and they describe hunting events in the bush. Andrew owned a large bow and was known as a skilled bow maker.

### **2.3 Procedural texts**

The texts in this chapter are all by Margaret Osi, with the exception of Text D.8, which lists the activities involved in sago processing and was told by Susan Bisam. Presumably, this genre of text did not have a place in traditional Kilmeri life, since all the necessary steps for producing a certain item of material culture were learnt by doing rather than by oral description. Again, the texts were produced to inform me about things connected with traditional life. The production of grass skirts and their colouring as well as the production of phallocrypts used to be common, but have been replaced by Western clothing for almost 50 years. Cooking in bamboo tubes has also been abandoned and people use tin pots nowadays. However, the brooms are still produced as described in Text D.6 (See Figure D.4). The same applies to the processing of sago, as sago pudding or pancakes are still the staple food. These have not been replaced by rice because it is simply too expensive, and so rice is only a supplement to the old sago-based diet.

### **2.4 Autobiographic texts**

Recollecting and narrating one's own life is an artificial undertaking for the Kilmeri people. Yet it was mastered by all three consultants who were asked to do so. Susan Bisam chose Tok Pisin to tell the main episodes of her life (Text E.3). Although she delivered a Kilmeri version, which is included in this collection, it is a rather rudimentary story. Andrew Wapi produced a longer narrative (Text E.4) that comprises his childhood and the main steps of his life.

The third life story of Margaret Osi can be called a masterpiece both in depicting the central episodes of her life and in her Kilmeri language style (Text E.5). In addition, her admiration for the mission becomes evident in her recollection of the agricultural manager's grief at the death of her husband, Lis Osi (cf. Text E.2).

In 1968 the autobiography of Sir Albert Maori Kiki (1931-1993) appeared. He was one of the founders of the Pangu Pati of Papua New Guinea, whose activities

eventually lead to independence. Kiki's book was titled "Ten Thousand Years in a Lifetime" (1968). A similar headline could be given to the lives of Margaret Osi, Susan Bisam and Andrew Wapi. Despite the impact of World War II they lived a childhood that was entirely traditional without any Western goods and ideas. In the region west of the Sepik, Australian influence was low. Had Margaret, Susan and Andrew known about their prominent predecessor, they would have been even more keen to let know a small auditory in and beyond Papua New Guinea about their lives and their contribution to history.

Both Andrew and Margaret grew up with relatives. Such an arrangement was very common in earlier times due to the numerous early deaths. So the two orphans in Text A.6 were a common occurrence only a few decades ago.

## 2.5 Contemporary village life

The chapter is a collection of stories and reports about happy and less happy events during the time of fieldwork. Again, Margaret Osi is the main storyteller, which reflects her talkative nature and her ability to tell long stories about any kind of event. Every time I returned to Papua New Guinea and to Ossima, Margaret was eager to tell me about the most important events. She did this for the fun of telling stories, but also to create a common ground about social incidents for the time of fieldwork. Although many more stories were told in Tok Pisin, she wanted to embed specific stories in the 'language of the place' (Tok Pisin: *tokples*) in order to frame them appropriately. Following the universal human urge, stories of illness and accidents were told for the most part, including accidents in which I myself was involved.

## 2.6 Episodes of daily life

This chapter is a collection of short episodes that Margaret Osi remembered by association. It may be a special experience of hers, such as her flight to the village of Green (Text G.1), or she may have wanted to inform me about certain habits in the village and in the bush. The special value of these short episodes lies in their high degree of spontaneity, as these contributions were not planned in any way. In contrast, the long narratives in other chapters were explicitly planned in advance and scheduled for a particular session or day. Moreover, these episodes reflect daily life in its incidental occurrences. The topics of these stories are completely random.

## 2.7 Overview of the texts

Table 2.1 provides an overview of the texts included in this collection. Note that the word count excludes the three texts that were narrated in Tok Pisin (A.7, B.4, B.9).

Table 2.1: The texts in this collection.

TEXT	TITLE	TOPIC	WORDS
A.1	<i>Am</i>	Genealogy of an Omoi clan	413
A.2	<i>Si yelo piyo</i>	Genealogy of the clan of Lis Osi	166
A.3	<i>Sakou</i>	A creation myth of some Kilmeri clans	838
A.4	<i>Haus tambaran</i>	Remembering the times past away	206
A.5	<i>Wapues</i>	Marriage ties between the villages of Ossima and Omula	374
A.6	<i>Pu ppulae</i>	A massacre of a clan, revenge against the leader, and a tabooed lake	373
A.7	<i>Muruk</i>	A massacre of a clan, committed by a cassowary man	–
A.8	<i>Ome na Lapi</i>	An earthquake caused by social misbehaviour	120
A.9	<i>Bue</i>	Reaching the sea and getting the taste of salt	86
B.1	<i>Bermepu</i>	An encounter with a bush spirit	277
B.2	<i>Urual bekulu</i>	An encounter with a bush spirit	617
B.3	<i>Walpop bo</i>	An encounter with a bush spirit	573
B.4	<i>Masalai piaune</i>	An encounter with a bush spirit who is successfully tricked by a human	–
B.5	<i>Kukumbina na Kusudua</i>	An encounter with a bush spirit	262
B.6	<i>Pu paek</i>	An encounter with a bush spirit	404
B.7	<i>Ruri onona ruri pialna</i>	An encounter with a bush spirit	402
B.8	<i>Urai ako wiye</i>	An encounter with a bush spirit	279
B.9	<i>Masalai pukpuk</i>	An encounter with a bush spirit	–

## 3 The narrators

### 3.1 Margaret Kai Apai Osi

Margaret is known by four names, and her names give already a view into her life. *Margaret* is her Western name of baptism. *Kai* is her native name and the one used by her parents. *Apai* is the name of her father. *Osi* is the family name of her husband Lis Osi. Nowadays, she calls herself simply Margaret Osi.

Margaret is the only surviving child of her mother Puma, who died early, but she has five half-siblings from her father's second wife Es. She said she was born in 1942. She now lives in Ossima, but her father is originally from Ninggera and left the area to settle in Omoi. So Margaret grew up in Omoi. Her knowledge of the Ninggera language comprises only a few words and it was therefore not possible to obtain any significant information about this language from her. Her father returned to Ninggera at some point in his life, presumably with his second wife. This is mentioned in Text C.1, which is about the death of her father, as the fatally ill man was brought back from the bush and mangrove swamps in Ninggera to Vanimo and to Ossima. In fact, one of Margaret's brothers, Jack, still lives in Ninggera. It is interesting to observe that a family can be spread not only across villages, but also across languages.

Margaret has no formal schooling. She was already 19 years old when the mission was founded in 1961. However, she is passively literate and can read the Bible in Tok Pisin. Unfortunately, she never learned to write and, thus, could not assist in the development of the Kilmeri orthography.

Margaret has four children. Overall, she is a very active, clever and prudent woman. Her youngest daughter Grace Osi has become a teacher and has a Bachelor's degree in education. When the mission came to Ossima with its white staff, Margaret quickly realised that a formal "Western" education would be essential in the future. She had a very high opinion of learning and teaching. At times she felt sad saying that she was no more than a "bus kanaka."<sup>1</sup> On the other hand, she was well aware that she had full command of Kilmeri - a privilege on the

---

<sup>1</sup>A derogatory term in Tok Pisin for an uncivilised person who follows a traditional rather than a modern lifestyle.

Figure 3.1: Margaret Osi stirring sago jelly

threshold of the 21st century, as subsequent generations had lost or abandoned the language at a rapid pace. She was dedicated to the Kilmeri documentation project from the very beginning and after a year had developed an astonishing degree of structural reflection on her language. Without her input, the field work would only have been half as successful as it is now. It is therefore most appropriate that more than half of the texts are authored by her; most of the texts in Chapters F and G are her own experiences.

### 3.2 Susan Sumoi Bisam

Susan is a bit younger than her *anti* (Tok Pisin for ‘aunt’) Margaret and she is the oldest of five children. Her native name and first name is *Sumoi*. *Bisam* is the name of her father. Her only brother, Joe, seems to be the leader in Ossima Asples, like his cousin Jeffrey in Osi Camp. Susan grew up without any formal education and is illiterate. Susan is the mother of ten children, including two

sets of twins. All the children survived infancy. One of her younger daughters successfully completed the 10th grade at Lumi High School.

Figure 3.2: Susan Bisam washing sago

Her husband Arnold was a crocodile hunter and settled near Angoram on the lower Sepik. At some point, the Puwani River became a renowned place for crocodile hunting and Arnold moved there. Later, his wife Susan followed him to Amanab, Imonda, Utai and Wasengla. There were also crocodile populations in the rivers of the shallow, swampy lowland areas south of the Bewani Mountains. Utai, for example, is quite similar to Ossima, with two rivers such as the Puwani and the Pual. In Susan's autobiographic story in Text E.3, which she delivered in both Tok Pisin and Kilmeri, she speaks of herself in the third person.

When I met Susan, she was still a strong woman and very actively involved in sago production. As she had little to no money, she and her younger children had to subsist on sago. At times, when it was too dry to wash the sago pith, they experienced periods of hunger. She then complained about the harshness of life and the little support she received from her male relatives. Susan seemed to have been immersed in the oral tradition, and she really enjoyed sharing the old stories

with me. Unfortunately, her active command of Kilmeri was diminished by her long stay in the Sepik and she preferred to recite stories in Tok Pisin. It was only later that Margaret found a productive way to co-narrate stories in Kilmeri with her. Therefore, we decided to include three of her Tok Pisin stories in Text A.7, B.4, and B.9.

### 3.3 Andrew Wapi

Andrew Wapi from Ossima Asples was about the same age as Margaret Osi and like her, he had never received any formal education, so he was not literate. Sadly, he passed away in 2009.

After some travelling he settled in Asples. As a young man, he seized the opportunity to work on copra plantations, which brought him to Rabaul. There he learnt Tok Pisin, the language that became increasingly natural to him over the years. When he returned to the area, the mission was founded and he was able to find paid work there. For several years he worked as a cook at the mission station in Utai in the south-eastern foothills of the Bewani Mountains, where two of his children were born. He then returned to Ossima. He was the father of six children. One of his sons died in 2000, and on this occasion a mourning singing took place. Despite his acquaintance with Western life Andrew highly valued the traditional way of life. He owned an impressive bow and was a good hunter. He was able to spot a bird of paradise hidden in a tree top and invisible to curious visitors!

Andrew has contributed five traditional stories (cf. Texts B.6, B.7, B.8, C.6, and C.7). Unfortunately, he seemed a bit intimidated by the recording equipment and might have produced a higher rate of disfluencies as a result. Nevertheless, he was always eager to present his stories about bush spirits and hunting events.

### 3.4 Brigitte Esau

Brigitte Esau is a generation younger than the above-mentioned narrators. She went to school in Ossima and continued her education in Vanimo. After completing high school, she found work in Port Moresby for two years. She was married to a man from Sepik, with whom she settled in Omoi. Like Susan Bisam, she is an example of a marriage with a man from another language which practically leads to the use of Tok Pisin as the family language. The respective language communities of husband and wife are not adjacent, nor was there any contact between them at earlier times.

Figure 3.3: Brigitte Esau (second from left) with her mother and children in Onume

Brigitte was keen to take part in the language work and contributed two stories that she had heard from her mother Sara. The brevity of her tales reflects the fact that her active command of Kilmeri was not comparable to that of her mother. Despite this, the two stories enrich the text collection. There are now two versions of the cultural exploitation of salt in Chapter A and a further story about an encounter between humans and bush spirits in Chapter B. Also note the sketch by Brigitte Esau showing the route from the Puwani-Pual basin to the coast (Figure A.6).

Sadly, Brigitte Esau passed away in 2014. She could still remember the time when the old men's house stood on a hill above the other houses in the Omoi uphill settlement where she had grown up. When she realised it was gone after returning from the city, she recalled feeling a deep sadness. With her deep appreciation of her origin and the old traditions she would have been able to revive the Kilmeri language in a team of like-minded people, yet her early death prevented this.

### 3.5 *Usikul*

*Usikul* is a member of one of the Omoi clans. He is always called by his two names *Usi* and *Kul*, which are merged to *Usikul*. He has no Western name. He lives on

### 3 *The narrators*

one of the hills that rise north of the riverside settlement of Omoi. He presents himself as a self-confident person navigating “between the worlds,” namely between the traditional and the modern world. He shows this mindset in a particular way that differs from that of Margaret Osi, who in her own way builds a bridge between tradition and “modernity.” Usikul is historically and politically aware and consciously tries to combine these diametrically opposed heritages.

Figure 3.4: Narrator Usikul

Usikul’s settlement is a small place called Ounup, consisting of two houses only, his old house and his new house. There is a waterhole nearby, but the small pool was overgrown with aquatic plants when I saw it in September 2000. For several years there was a road near his property, a logging track, which was only temporarily maintained and disappeared when the valuable timber was felled and transported away. The income from the logging brought him some money, some of which he invested in long trousers, a fine shirt and leather shoes: his modern appearance. He wore it to celebrate the day when he could pass on his

intricate story about the fate of his clan and the old tradition. On this occasion, two feathers decorated his head ( Figure 3.4).

### 3.6 Sei Walup

Sei Walup was an old man who lived in Awol and, like Usikul, was only known by his two native names. The village of Awol is 2 to 3 hours' walk from Ossima. The children from there who attend the Ossima Mission school usually live with relatives in Ossima. No one from the village of Awol was involved in the fieldwork as a regular consultant, but when I asked for people who knew old stories, he was mentioned as a knowledgeable person. Unfortunately, there was only one session with him, in which he told a clan story (Text A.6). He proved to be a passionate storyteller like Susan Bisam. In his lengthy introduction to the story it becomes evident that this story should belong to the heritage of the whole Kilmeri speaking community. He seemed to be aware of all the conflicts between the clans and the sometimes deadly consequences. One lesson of the story he told me could be that one should never forget local history.

Figure 3.5: Sei Walup (on the right) in front of his house

### 3 *The narrators*

Sei Walup seemed to live as much as possible under traditional conditions. His house was rather modest compared to the houses in Ossima (Figure 3.5). In Awol, modern material culture was less visible than in the villages along the Pual and Puwani rivers. There were no water tanks, nor corrugated iron roofs (Figure A.3).

#### 3.7 John Sol

John Sol, a middle-aged man from the Isi camp, was not a storyteller himself. Nevertheless, the clan-related text “Ome and Lapi” (Text A.8) is based on his knowledge. Margaret Osi and I had visited him with the intention to buy a cow, as he was one of those who owned a number of cattle. Later, when Margaret was finalising the deal, John brought up this story and provided a short version of it. It was this version that Margaret then reproduced.

#### 3.8 Anita Osi and Lillian Bisam

In the first months of my fieldwork my older consultants were assisted by young people who had attended the school at Ossima. They were Anita Osi, the oldest daughter of Jeffrey Osi, and Lillian Bisam, the oldest daughter of Joe Bisam, Jeffrey Osi’s cousin from Ossima Asples. In 2000, both girls were 16 years old. They took turns attending the language sessions, were able to read what I had written down, and suggested spelling when they thought I had made mistakes in my transcription decisions. This often helped to clarify things. Both had a very good passive knowledge of Kilmeri. Especially Lillian’s explanations in particular showed that the person agreement with the recipient argument is a central feature of the grammar, which is retained in the otherwise simplified Kilmeri (See Section 5.7). I am also grateful for her explanation of the digestive system of a bush spirit, namely it cannot digest what it eats. Instead, everything drops out of its anus undigested. This is therefore a clear indication of whether an unknown male person is a human or a bush spirit.

#### 3.9 Personal statement

In March/April 1999, when I travelled to Papua New Guinea for the first time to explore where I should conduct my field research, I also visited the University of Papua New Guinea in Port Moresby. It seemed appropriate to meet Professor Otto Nekitel from the Department of Language and Literature; who was teaching linguistics there. Even though I came unannounced and simply knocked on

the door of his office, he welcomed me warmly. I immediately sensed his interest in my plans and his intellectual support to document a Papuan language. He encouraged me to go to Ossima, a place apparently known because of its agricultural farm. Otto Nekitel urged me not only to write a grammar of Kilmeri, but collect the traditional stories of the Kilmeri people in order to preserve these for future generations. Sadly, Otto Nekitel passed away soon after my second visit to him in August 2001.

There is a huge difference between an indigenous scholar and a foreign scholar coming from the other end of the world! My brief field stays never allowed me to gain a comprehensive insight into the society of the people who hosted me. I always remained an outsider. I was able to learn their language to a certain extent, but the links between the language and their traditional way of life remained inaccessible to me. Analysing and understanding the structure of a language is one thing, that have been passed down for generations are quite another.

At first, the plots of the stories seemed strange to me. My consultants patiently attempted to explain the plot lines to me. They felt at ease with all the protagonists and characters. They felt comfortable with their past, even though they were living in a constantly modernising environment. Their voices are the voices of yesterday, today and – hopefully – tomorrow.<sup>2</sup>

Behind a “voice” there is always the story teller with his or her very own biography and life experiences. I wanted the narrators to become as vivid figures as the characters of their stories. Clearly, this is a subjective perspective. All too often, fieldworkers limit the information provided about the story tellers to a few data points that might be of statistical value. The narrators’ personalities, however, remain in the dark. Personally, I find this regrettable. That is why I have decided to introduce them with some biographical details, so that the reader can get to know the real persons behind the stories. I think it is even a matter of respect to their efforts in helping me despite my very slow progress in learning their language and my “hevi maus” as my landlord Jeffrey Osi once put it. When reflecting on the years of fieldwork, my encounters with so many different people, and the conversations that I have had with them, I can find a one recurring theme: their desire and hope to participate in the “greater world.”

Unfortunately, I could not obtain the narrators’ explicit consent to portray them in this book. At the time of fieldwork, my priority was to write a grammatical description, and all my consultants are simply listed in the grammar. Now, twenty-five years later, the narrators featured in this book have passed away because of age or sickness, and it is impossible to get their explicit consent. I

### 3 *The narrators*

can only hope that my behaviour towards them was such that they would have enjoyed becoming part of this book.

## 4 Provenance

### 4.1 transcription and editing

#### 4.1.1 General remarks

Twenty-five years passed between the beginning of my fieldwork in November 1999 and the publication of this Kilmeri text collection. The recording equipment was technically up to the standard of the year 2000 and consisted of a table microphone, a tape recorder with Maxell or BASF tapes. The microphone was placed on the table about half a metre away from the speaker. The recording is not uniform because the speakers changed their voice intensity during the narration.

The recordings took place in my house at Osi Camp, which was built from bush material. Osi Camp is a hamlet consisting of about six houses belonging to Lis Osi's family. The recordings could not be isolated from the background noises of village life. In some cases, the background noise was so loud that it impeded listening to the tapes for subsequent transcription. The repeated rooster cries are almost comical. In any case, there was no way to avoid the sounds of everyday village life.

About half of the texts were recorded, the other half of the (mostly short) texts were written down by me while the narrator spoke in a relatively slow and well-articulated manner.

A note on the titles of the texts: Only in a few cases the titles were created by the narrators themselves, while most of them were created by me. Instead of a short title, narrators sometimes chose an introductory sentence in Tok Pisin to frame the story. This happened, for instance, with the story of the girl Wapues in Text A.5. If a narrator chose her own title, then this is stated in the short introduction to the respective text.

The texts are presented in two versions. First, there is a parallel text version with the original Kilmeri and the English translation in two columns. In this version, Kilmeri is written with punctuation marks and paragraphs that roughly correspond to the English translations. Secondly, there is the interlinearised version:

a sequenced, morphologically analysed and glossed text version with a translation into English. It should be noted that the parallel text version uses Kilmeri's morpho-phonemic rules (cf. Gerstner-Link 2018: 75-84).

##### 4.1.2 Stories of early fieldwork

The narrations of these stories were scheduled for a specific session or day and took place in my house. Once everyone had arrived, the recording equipment was set up and explained to the narrator and to Margaret Osi, who was present at every recording session on account of her language proficiency. Usually, the transcription started the day after the recording. This was a time-consuming undertaking and required a great deal of patience on both sides. It happened time and again that a few words or sentences in a recording could not be recognised. After listening several times to a passage, Margaret would say: *Mi no save, mi no harim, em no klia long mi*. ('I don't know, I can't understand, it's not clear to me.') We have omitted such passages and proceeded with the transcription. Omissions of this kind are not signposted in the edited texts. Obviously, Margaret Osi was concerned to present a grammatically sound, fairly coherent narrative. She had no interest in interruptions by "stupid" repetitions whenever the narrator had lost the plot.

I insisted on including the phrases in Tok Pisin, as code-switching was a typical text feature of the narrator Andrew Wapi. On one occasion, Margaret herself used Tok Pisin when she began to tell a story. She only realised this when I asked her about it, and she then went on in Kilmeri (Text A.5).

##### 4.1.3 Procedural texts

The production of procedural texts was not planned in advance, but happened spontaneously. On such occasions, Margaret Osi used to say something like, "Well, you should learn about penis gourds that my husband used to wear," or "Yesterday I made oil, so listen to how it's done!" Then Margaret spoke loud and clear, and the text was written down as she spoke. Only rarely did she edit the text herself afterwards. Some of these changes consisted of choosing a serial verb instead of a simple verb or adding a sentence in order to clarify something.

These texts are not complete instructions on how to do something, but short descriptions to provide the listener with some basic knowledge. The texts were not recorded on tape.

#### 4.1.4 Episodes of daily life

These are Margaret Osi's spontaneous thoughts. Setting up a recording device would have been impractical, it would have interrupted the spontaneity of her ideas. Some of these (very) short texts even have an intimate flavour, for example when Margaret Osi recounts a dream she had the previous night (Text G.4). Such situations are sensitive and must not be disturbed by technical equipment.

The language of these short events was always free-flowing. I took notes and only afterwards asked questions about some unclear words or constructions. The flow of the speaker's thoughts was therefore not interrupted. These texts are not edited, but reflect what was spoken.

#### 4.1.5 Teamwork stories

There are three traditional stories that were narrated in team by Susan Bisam and Margaret Osi: *Urual bekulu* (Text B.2), *Walpop bo* (Text B.3), and *Wis yako* (Text B.11). The first step in this process was to remember the story. The two women took turns telling the story, using both languages, Kilmeri and Tok Pisin. They reassured each other about the correct unfolding of the events. This step was recorded but could not be transcribed because there was too much "meta-talk," namely discussions about which character did exactly what at what point in time, and so on. Once this was clarified, one of the women continued the story. In order to get a coherent and fluent version of the story, I asked Margaret to retell the whole story the next day. This version, as the second step of the storytelling, was not recorded but written down while Margaret spoke.

The text *The spellbound lake* (Text A.6) was narrated by a single person, Sei Walup. But it was narrated in Tok Pisin with only a few Kilmeri insertions. Despite being recorded, it was not suitable as a Kilmeri text in this form. However, Margaret Osi, who was not present at the recording in the village of Awol, also seemed to know this story. After listening to the Tok Pisin version, she retold it in Kilmeri. This version was not recorded on tape, but written down.

#### 4.1.6 Stories from later fieldwork

From 2004 onwards, many stories were no longer recorded but written down as they were spoken. This type of storytelling was much favoured by Margaret Osi. It seemed to enhance her concentration. The face-to-face interaction during the storytelling sessions – sometimes planned, sometimes not – came close to the traditional setting, at least to some extent. The eye contact showed Margaret that I was paying attention to her and the story. In comparison, the microphone

and recorder seemed to replace the human listener, and the storyteller in question – in fact all the storytellers – focussed on the “machine,” as they often called it. Without the recorder, the whole situation was more relaxed and simply more natural. There was no fear of “making a mistake.” So we mostly avoided recording.

In two cases, the narratives describing old village life were recorded after a simpler oral presentation. In these cases, it is interesting to compare the choice of words and succinctness of the resulting texts. The simpler oral presentation was much more concise and avoided side issues of the story as well as special constructions such as the tail-head linkage constructions. In contrast, the recorded texts were longer and touched on subplots that illustrated the general story scene but were not strictly relevant to the topic of the text. The use of tail-head linkage constructions now seemed to help the speaker – Margaret Osi – remember her personal experiences.

After a story had been written down, I read it back to Margaret, and she decided on any editorial interventions. Such changes were minimal: she never deleted sentences, but occasionally added a more sophisticated word.

## 4.2 English translation principles

The Kilmeri text collection provides two types of English translation for the stories. One is the English running text translation and the other is the translation in the glossed text version. These translations differ in a number of aspects.

The English running text translation can be found in the parallel text version of each text. It retells the story in English and familiarises the reader with the plot of a story and its development. It preserves all direct speech as we find much dialogue in several texts. However, it does not preserve the style of the Kilmeri narration and is not intended to (fully) account for the grammar of Kilmeri. This translation will be helpful to anthropologists and historians, who might not be so much concerned with the intricacies of Kilmeri grammar. But it will also give the linguist a first orientation about the content of the story.

The English translation in the interlinear version, i.e. in the glossed text, stays closer to the original Kilmeri version. It tries to match the syntactic constructions of Kilmeri. For example, backgrounding constructions and tail-head linkage constructions are usually retained in English. The tenses and tense variations of the Kilmeri text are also generally retained. Subjects in the Kilmeri text appear as subjects in the English translation. However, topic-focus constructions of subjects (and sometimes objects) are rendered as plain subjects (or objects). Deictic

expressions are retained in the English sentence structure whenever possible. Occasionally, deictic forms in Kilmeri texts are closely spaced. This is done to emphasise the process of situational understanding by a protagonist. Narrative pauses or short interruptions of speech are preserved in the English translation by repeating a phrase as in Kilmeri. Often a referential phrase stands alone as an utterance followed by a full stop. Finally, Kilmeri's style of narration is rich in (visual) figurative speech, which the translation attempts to preserve.

Generally, both English translations contain more explicit referential phrases, as the omission of these is part of the concise Kilmeri style. The punctuation in the translations, especially the use of a full stop, reflect the Kilmeri clauses in most cases. Commas are used much less frequently to separate short or single-verb clauses. Listed entities referred to by nouns are not separated by commas in the Kilmeri running text.

I will illustrate my translation principles in the glossed texts with a few examples in the following sections.

### 4.2.1 The use of the continuous past

In Text A.3 *Sakou*, the phrase *umul (se)neki* 'to think about sth, to consider, to reflect upon' appears in the Sequences (6), (13), (14), and (18). But the continuous past *umul nekip* is only used in Sequence (18), otherwise the punctual past is used. The difference in tense points to the fact that the hero *Sakou* in (18) realises that he has to fight a bush spirit. His thinking about what to do needs some time now: What will be the best way to trick the evil spirit so that he cannot threaten *Sakou*'s life? Therefore this difference in tense is retained in the translation.

Furthermore, there are verbs in Kilmeri that denote actions with inherent duration like *nise* 'laying in wait' or *le(wo)-* 'wait (for sb)'. Such actions are preferably coded by the continuous past instead of the punctual past (e.g. Text A.6, Sequence (29)). The translation retains the continuous past. The verb *nake* 'sit, live, stay' is a stative verb with inherent duration. In Kilmeri, it occurs always in the continuous past. The translation is guided by the narrative context.

The verb *dob pi* 'to look at' and its variants appear in the punctual past or in the continuous past, depending on whether it refers to a brief glance at something or to a searching look, for example in Text A.6, Sequence (26) and in Text A.8, Sequence (7). The English translation traces this difference.

### 4.2.2 Tense shift

In the Kilmeri texts, it can be observed quite frequently that the past tense shifts to present tense. It is not entirely clear if this switch follows a strict discourse

rule. However, there are certainly cases in which the change to present tense serves a narrative purpose.

For example, in Text A.5, Sequence (17) continues in present tense, although we have past tense in the preceding Sequence (16). At this point in the story of *Wapues*, the female protagonist realises that the alleged bush spirit is in fact a human being, and she is positively surprised. This narrative turn is expressed by a tense shift, which is continued to Sequences (18) and (19). The turn of surprise is also present in Text A.4 in Sequences (44), (46), (47), and (49). In the story of *Sakou*, the bush spirit, who seemed dead, suddenly gets up and climbs up the mountain/tree. The verb *ppue* ‘go up, climb’ appears in present tense in Sequence (49) even though preceding verbs appeared in punctual past. Also in Text A.6, Sequence (31), the escape of the protagonist Amou is expressed in present tense in order to fully capture the dramatic turn of the story.

There are also tense shifts for grammatical reasons. In Text A.6, the Sequences (20) and (21) appear in present tense which is triggered by the proximal deictic marking: *waeripi pule ere mini* ‘waeripi-fish come, here they come hither’ with the proximal deictic *ere* and the inherently deictic verb *mini* ‘come hither/here’. This particular sensitivity to the tense of the original language should not be obscured by the translation.

#### 4.2.3 Backgrounding

Backgrounding by subordinating verb forms is a common construction in Kilmeri. The most frequent form is *k-VERB-p-no* with sequential subordinating meaning. The most suitable English translation of this verb form is ‘having + past participle.’ This translation works best when the subordinate clause and the main clause have the same subject/agent. But even in this case, two main clauses in the simple past tense may be preferable.

However, I choose another kind of translation in the case of different subject-s/actors, as illustrated in Text A.5, Sequence (16). Here, two consecutive events are backgrounded by the verbal forms *k-poname-p-no* ‘having given’ and *k-ni-p-no* ‘having eaten’. The two events have different agents, the girl *Wapues* and the bush spirit respectively. This interesting discourse structure is translated into English with two separate clauses ‘when she had given (the food) to him and he had eaten it.’ See also Gerstner-Link (2018: 473-476), where I describe same subject and different subject marking in sequential subordinating verb forms.

#### 4.2.4 Topic constructions

Consider the following topic-focus constructions in Text B.5 in Sequence (5): *weri ki muelno de ke ppulaena hukpo*, which literally translates as ‘the younger sister, she said to her: “you, you caught many fish.”’ In the English translation, I omitted the topic pronouns, in order to produce a better English. The same can be found in Text B.7, Sequences (4), (27), and (29); and in Text B.8, Sequences (17) and (27). Note that the Kilmeri topic construction often occurs in the context of direct speech.

#### 4.2.5 Summary

The English translation in the glossed text version is intended to make the reader familiar with the characteristic narrative style of Kilmeri. If a free translation were to level out stylistic peculiarities, it would defeat this purpose. I believe that a text collection should go beyond individual sentences and provide insights into the discourse mechanisms of a language and the coherence of the text. However, this is usually not the aim of grammars, which are descriptions of grammatical structures in a narrower sense. One might argue that one only needs to read the Kilmeri wording in detail in order to understand the discourse mechanisms of the language. However, this is not as easy as it sounds; it is rather difficult without a good knowledge of the grammar. Therefore, the English translation in the glossed texts bridges the gap between Kilmeri discourse style and English text style.

### 4.3 Parallel texts

In addition to the glossed text version, this collection includes a running text version in Kilmeri and English. Running texts have a greater potential to invite the reader into the indigenous literature than the rather technical apparatus of interlinearization. One option was to place the running text versions of the individual stories in sequence. This type of visualisation would come closest to our own – the fieldworker’s and reader’s – tradition. However, there is a drawback in that the texts would have been presented without their inherent correlation.

The parallel arrangement in columns enables a more direct comparison. The most obvious parameter for comparison is the length of the texts. The comparison of the Kilmeri version and the English version shows that the Kilmeri version is shorter and more concise, paragraph by paragraph. This points to a linguistic

issue in that languages differ in their way of linking and embedding clauses. Languages such as English and German use a wide range of paratactic and hypotactic conjunctions that are absent in other languages (e.g. Latin and Ancient Greek). Kilmeri also lacks this type of connectivity. Attitudinal adverbials, which often link sentences, do not exist in Kilmeri at all.

Kilmeri can also easily dispense with pronouns. This can lead to sequences of verbs as one-word sentences. Referential explicitness in relation to local expressions is less important in Kilmeri than in English, it seems. But there is one caveat in that context: Kilmeri stories in the text collection were originally aimed at an audience that is capable of inferring places from the immediate context of the action or from common ground.

In addition, Kilmeri often does not embed the direct speech in a matrix clause such as 'X says', but instead only reproduces the direct speech. This may even happen at the beginning of a turn-taking sequence of direct speech between two protagonists in a story. On the other hand, the verb *mueli*- 'say to someone, tell someone, talk to someone' belongs to the small class of verbs with obligatory recipient agreement, so that the verb agrees with the addressee of the direct speech. It may also be of interest here that Kilmeri has no real counterpart of the verb *mueli* with the meaning of 'to answer, to reply'. The serial verb *dori\_mueli* 'to turn back + say' can be used to indicate a responding speech, but it is more often used for the speaker's own repetition of what has been said.

All these characteristics of Kilmeri outlined above result in a more compact text, making paragraphs and entire texts visibly shorter than the English translations. This arrangement as parallel texts reveals the different grammatical and discursive strategies between Kilmeri and English at a glance.

## 5 Grammatical overview

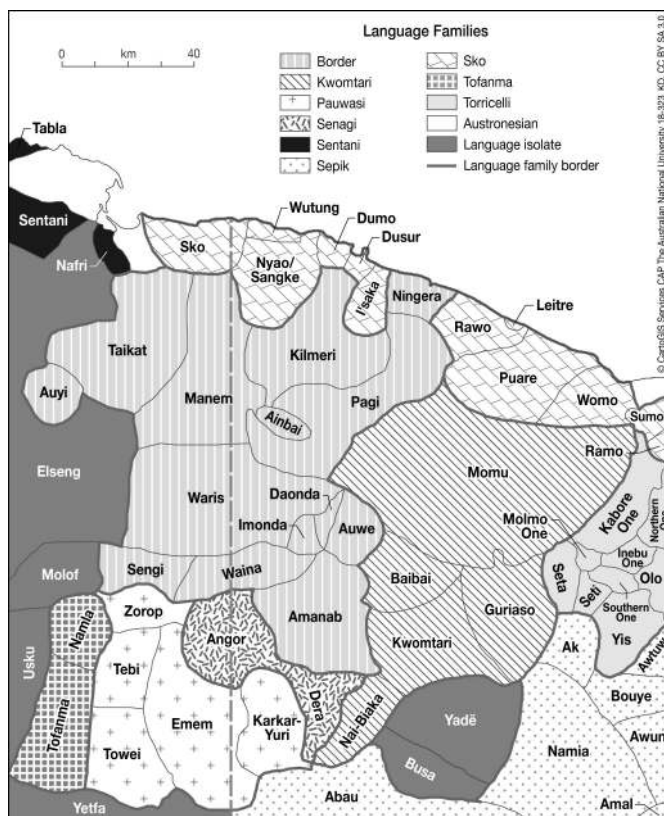

Figure 5.1: Location of Kilmeri in the Border family and surrounding language families.

### 5.1 Introductory remarks

Kilmeri is a Papuan language of the Border family, which is located in northern New Guinea on both sides of the international border between Papua New

Guinea and Indonesia (Figure 5.1). The following grammatical overview summarises the main features of Kilmeri grammar. It contains many illustrating and explanatory tables. The focus is on the coding of grammatical relations. Kilmeri combines several independent strategies that together build up an intricate system of marking these relations. One will find all the necessary examples covering the morphological coding devices of subjects and objects as well as of the semantic roles of Agent, Patient and Recipient. For further and detailed information on all grammatical domains the reader is referred to my book “A Grammar of Kilmeri” (Gerstner-Link 2018) that presents the relevant discussions based on rich illustrations.

## 5.2 Phonology

Tables 5.1 and 5.2 present the inventories of vowels and consonants of Kilmeri as well as its biphonemic vowel sequences (cf. Table 5.3). The most common syllable structure in Kilmeri is CV. For verbs, this is the only syllable structure, with a few exceptions of the syllable type V. Nouns can also have closed syllables of the type CVC. Some fully inflected verbs also shows closed syllables. Serial verbs have the syllable structure CVCV\_CVCV.

Biphonemic vowel sequences are quite frequent (cf. Table 5.3). In some words as well as in spoken Kilmeri complex syllable onsets occur with the following structures C(b,p,k,s) + /r/ or C(k,s) + /l/ or C(s) + N.

Table 5.4 shows the orthography used in this text collection.

Note the following morphophonemic changes which occur in certain TAM inflected verb forms: (i) vowel lowering before /p/ and /m/; (ii) regressive vowel assimilation after consonantal prefixes; (iii) apocope, syncope, coalescence of vowels. Some of these morphophonemic changes become apparent when comparing the phonological first line of the glossed texts with the morphological second line.

## 5.3 Word order and focus position

The basic word order in Kilmeri is SV or AOV. Temporal adjuncts usually precede the subject, while locative adjuncts follow the verb. The focus position of a clause is immediately before the verb. This preverbal position is obligatory for verbal negation and *wh*-words. If a locative phrase is the focus of an utterance, the locative adjunct appears right before the verb in the clausal focus position. The

Table 5.1: Vowel system of Kilmeri

<r>	/r/		
<s>	/s/		
<w>	/v/		
<y>	/j/		

same happens for subject focus. Instrumental adjuncts usually occur in some position before the verb.

Although Kilmeri uses personal pronouns frequently, there are often verb-only clauses when the actor of the action indexed by the verb is contextually or situationally known. Many clauses consist of only two constituents, namely, a type of nominal phrase (subject phrase, object phrase, locative phrase, instrumental phrase, temporal phrase) and the verb. Clauses containing three or more constituents are rare.

## 5.4 Nominal morphology and noun phrase structure

Table 5.5 shows the nominal case suffixes; it also contains three clitics that occur mainly on nominals. Kilmeri has only peripheral or semantic cases. Grammatical relations are encoded in the verb morphology (cf. Section 5.7).

All types of modifiers follow their respective head noun. Examples (1-8) illustrate some possible structures. Case suffixes appear at the end of the noun phrase, and have scope over the whole phrase.

## 5.4 Nominal morphology and noun phrase structure

Table 5.5: Nominal case suffixes and clitics

SUFFIX	GLOSS	FUNCTION
<i>-pi</i>	POSS	possessive case
<i>-no</i>	INS	instrumental-comitative case
<i>-yo</i>	LOC	locative-allative case
<i>-ka</i>	PATH	path indicating case
<i>-so</i>	SIM	similative case

|---|---|
| <p>(1) [N ADJ POSS]<br/> <i>yip puene kopi</i><br/> house new 1SG.POSS<br/> ‘my new house’</p>                                      | <p>(5) [N NP]<br/> <i>ako dari werino</i><br/> wife old.sister young.sister.INS<br/> ‘wives, older and younger sister’</p>        |
| <p>(2) [N ADJ QT]<br/> <i>yip ikoi an_baka</i><br/> house big five<br/> ‘five big house’</p>  | <p>(6) [N[N POSS]]<br/> <i>buka ruri ikep</i><br/> sister’s.child child 3SG.POSS<br/> ‘the nephew, his own child’</p>             |
| <p>(3) [N N QT]<br/> <i>bese supue dupua</i><br/> tulip-greens bunch two<br/> ‘two bunches of tulip-greens’</p>                     | <p>(7) [[N ADJ] N-POSS]<br/> <i>yip puene Jeffrey-pi</i><br/> house new Jeffrey-POSS<br/> ‘Jeffrey’s new house’</p>               |
| <p>(4) [[N N]<sub>POSS</sub> QT DET]<br/> <i>yûr su dupua ba</i><br/> chicken egg two other<br/> ‘[the] two other chicken eggs’</p> | <p>(8) [[N ADJ] N-POSS-LOC]<br/> <i>yip puene Jeffrey-pi-yo</i><br/> house new Jeffrey-POSS-LOC<br/> ‘at Jeffrey’s new house’</p> |

Noun phrases can be connected by the postposed particle *roise* ‘with, together (with)’. The particle connects simple noun phrases as well as complex noun phrases. For simple noun phrases, the *roise*-phrase immediately follows the first element (9). When connecting complex noun phrases, the *roise*-phrase can be postponed after the verb (10).

## 5 Grammatical overview

### (9) *bese paepu roise baroko*

bese            paepu            roise ba-re-ko  
tulip.leaves mushrooms with FAC-get.done-FAC  
‘The mushrooms with *tulip*-leaves are done.’ [Text C.3 Sequence 16]

### (10) *bi puaku bou ulap, sũ worno roise*

bi puaku bou            ule-p            sũ wor-no roise  
pig head back.limbs be.there.PL fire dog-INS together.with  
‘A pig’s head and back limbs were there, together with embers and a dog.’  
[Text A.5 Sequence 7]

## 5.5 Pronouns

The personal pronouns of Kilmeri distinguish the categories of person, number, and clusivity. These distinctions lead to eleven different pronominal forms. It is worth mentioning that the original pronoun system of the Border language family comes with only four forms: first person, second person, third person, and inclusive. The expanded system of Kilmeri is a new development which can easily be seen in the morphological structure of the newly added forms (cf. Tables 5.6, 5.7, and 5.8).

Table 5.6: Pronouns

	SINGULAR	DUAL	PLURAL
1 INCL	<i>ko</i>	<i>dedukoyo</i>	<i>nuko</i>
1 EXCL		<i>koyo</i>	<i>uke</i>
2	<i>de</i>	<i>deyo</i>	<i>ine</i>
3	<i>ki ~ ke</i>	<i>kiyo</i>	<i>iki</i>

Table 5.7: Emphatic pronouns

	SINGULAR	PLURAL
1	<i>ko ike</i>	<i>nuko ike</i>
2	<i>de eli</i>	<i>ine eli</i>
3	<i>ki=ro ~ ke=ro</i>	<i>iki=ro</i>

Table 5.8: Possessive pronouns

	SINGULAR	DUAL	PLURAL
1 INCL	<i>ko-pi</i>	<i>dedukoyo-pi</i>	<i>nuko-pi</i>
1 EXCL		<i>koyo-pi</i>	<i>uke-pi</i>
2	<i>de-pi</i>	<i>deyo-pi</i>	<i>ine-pi</i>
3	<i>kep (ki-pi)</i>	<i>kiyo-pi</i>	<i>iki-pi</i>

Note that the dual inclusive form *dedukoyo* is often substituted by the plural inclusive form *nuko*. In texts, we frequently find phrases like *nuko i-le* [we.INCL DU.S-go] ‘we (two) go’. In contrast, the dual exclusive form is commonly used: *koyo i-le* [we.DU.EXCL DU.S-go] ‘we two go’.

## 5.6 Verbal TAM morphology

TAM morphology and semantics in Kilmeri is quite extensive with 26 categories encoded by a variety of marking patterns. There are only few categories of pure tense (Table 5.9), but there are a large number of aspect categories (Table 5.10) and especially modality categories. The supercategory of modality can be divided into epistemic modality (Table 5.11) and deontic modality (Table 5.12). Epistemic modality is speaker-based, while the deontic modality is anchored in circumstances of the state of affairs. I refer the reader to the texts in this collection in which these categories occur in their most natural context. In (Gerstner-Link 2018: 248-321), I provide a detailed discussion of all TAM related forms and meanings. For explanatory purposes, I present a minimal outline of the TAM system in the following tables.

Table 5.9: Tense categories

AFFIX	GLOSS	FUNCTION
bare verb	n/a	present, continuous present, immediate future
<i>-p</i>	-PC	continuous past: ongoing action in the past
vowel backshift or lowering (+elision)	.PP	punctual past: bounded action in the past
<i>-ko</i>	-RTS	relative tense in the past
<i>-ipe</i>	-ANT	anteriority in discourse

Table 5.10: Aspect categories

AFFIX	GLOSS	FUNCTION
<i>-uli</i>	-PROG	Progressive and habitative: an action is ongoing for quite some time or is somebody's habit
<i>-nake</i>	-DUR	Durative: an action continues for some time
<i>mi-</i>	ITER-	Iterative: an action is repeated several or many times
<i>-ke</i>	-INGR	Ingressive
<i>-or</i>	-CON	Conative: an action is attempted
<i>-ou</i>	-FRUS	Frustrative: an action could not be done successfully
<i>-we</i>	-TER	Terminative: an action is done vigorously
<i>-wole</i>	-CPL	Completive: an action is completed

The possibility suffix *-m* occurs in five more categories as one element of marking. The six modal categories in which the possibility suffix *-m* occurs have in common that the state of affairs cannot become factual for different types of causes.

Table 5.11: Epistemic modality

AFFIX	GLOSS	FUNCTION
<i>ba-verb-ko</i>	FAC-verb-FAC	Factuality based on perception
<i>u-</i>	DFAC-	Deictic factuality: visual perception
<i>dV-</i>	LKH-	Likelihood: will probably happen or has probably happened
<i>-m</i>	-POS	Possibility: may happen in the future
<i>asa verb-m</i>	how verb-POS	Impossibility: cannot happen
<i>ba verb-we-m</i>	other verb-TER-POS	Supinative: combination of terminative and possibility under the scope of emphatic negation. It denotes sb's negative disposition.

Table 5.12: Deontic modality

AFFIX	GLOSS	FUNCTION
<i>-p, -yep</i> (PL)	-IMP	Imperative of second person: an order towards the hearer
<i>a-</i>	IMP3-	Imperative of third person: somebody may or should do something
<i>muli</i>	‘want, say’	Volition: somebody wants something
<i>kra-</i>	NIV-	Non-intervention: a state of affairs should continue
<i>kV-verb-m</i>	PROH-verb-PROH	Prohibitive: something must not be done by the hearer
<i>boka-verb-m</i>	OBS-verb-OBS	Obstructive: something impedes an action
<i>mona-verb-m</i>	IRR-verb-IRR	Irrealis: counterfactual events in the past or hypothetical events in the future

## 5.7 Grammatical relations

In Kilmeri, grammatical relations are encoded exclusively in the verb. There are no core cases for subjects and objects. Thus, the verb alone bears the load of marking the syntactic functions and the semantic roles of agent, patient, and recipient. This grammatical task is divided between the marking of number and the marking of person, which are (to a large extent) independent of each other.

### 5.7.1 The coding of number

In Kilmeri, number marking on the verb distinguishes singular, dual, and plural. The plain verb form denotes a singular referent of the verbal action. Table 5.13 presents the affixes marking duality and plurality. The suffixes *-wepi* and *-mapi* probably reflect a former serial verb construction. Their punctual past forms are regular, as shown in Table 5.9.

Examples (11) and (12) illustrate singular verb forms without any number marking. The participant person is coded by a pronoun that is obligatory in such sentences.

Table 5.13: Number related affixes

AFFIX	GLOSS	FUNCTION
<i>i-/-i</i>	DU.S/A	dual subject/agent
<i>-we</i>	DU.S/O	dual subject/patient object; uncontrolled patient subject
<i>wo-</i>	ACCOM	accompaniment, denotes dual or paucal subject
<i>-wepi</i>	QUANT.S/O	plurality of subject or patient object
<i>-mapi</i>	QUANT.E	event plurality

- (11) *em ko seleyo le*  
 em ko sele-yo le  
 tomorrow I garden-LOC go  
 ‘Tomorrow I will go to the garden.’ [overheard conversation]

- (12) *de aryo le*  
 de aryo le  
 you where go  
 ‘Where are you going?’ [overheard conversation]

The dual verb form denotes two participants in the verbal action. The dual of S and A is marked by the affix *i-/-i*. The affix occurs as a prefix with the verbs that have a suppletive plural form for S, as in (13). It occurs as a suffix (14) for verbs that have a suppletive plural form for O, and for all other verbs (Cf. Gerstner-Link 2018: 341, 347, Table 7.2 there also shows the exceptions).

- (13) *dedukoyo seleyo ile*  
 dedukoyo sele-yo i-le  
 we.INCL garden-LOC DU.S-go  
 ‘We two go to the garden.’ [overheard conversation]

- (14) *dedukoyo pewo yasiyei*  
 dedukoyo pewo yasiye-i  
 we.INCL banana plant-DU.A  
 ‘We two will plant bananas.’ [overheard conversation]

The dual of O is marked by the suffix *-we* (15). This suffix is also used with verbs whose subject has the feature [-CONTR] (Gerstner-Link 2018: 329-330), as in (16).

- (15) *bepu ko nîsî dupua wepulowe*  
 bepu ko nîsî dupua wepulo-we  
 sago.grub I string two bring.PP-DU.O  
 ‘I brought two strings of sago grubs.’ [V,83]<sup>1</sup>

- (16) *epe aino kopi mariwe*  
 epe ai-no ko-pi mari-we  
 mother father-INS 1SG-POSS be.sick-DU.S  
 ‘My parents are sick.’ [V,180]

The marking of plural number in Kilmeri is diverse. Many verbs come with a suppletive plural form denoting the plurality of S (intransitive verbs), as in (17) and (18), or O (transitive verbs), as in (19). A few verbs mark plurality of A by suppletive forms. In addition, there is the suffix *-wepi* that likewise marks the plurality of S and O, but never the plurality of A. Instead of already given duality and plurality, dual and plural forms of verbs can also denote incremental number.

Plurality coded by suppletive forms is distributive and participant related, but there are cases of action/event relatedness. Plurality coded by the suffix *-wepi* is distributive or cumulative, and it can be participant or action/event related (cf. Gerstner-Link 2018: 363) The coding devices of suppletive plural and *-wepi* can also be combined.

- (17) *uke kumune seleyo mole*  
 uke kumune sele-yo mole  
 we.EXCL all.COLL garden-LOC go.PL  
 ‘We all go to the garden.’ [overheard conversation]

- (18) *dor anno kopi ripepi*  
 dor an-no ko-pi ripepi  
 foot hand-INS 1SG-POSS be.numb.PL  
 ‘My feet and hands are numb.’ [V,144]

- (19) *ko ul kiniyo kale*  
 ko ul kiniyo kale  
 I bamboo all lay.horizontally.PL.O  
 ‘I lay all the bamboo rods in parallel.’ [VII,91]

<sup>1</sup>These codes refer to my field notebooks.

## 5 Grammatical overview

In example (20) we see a combination of plural and dual marking: The plural verb form encodes the plurality of the patient object via suppletion, but also bears the dual agent suffix.

- (20) *deyo ri yipyo melinaip*  
 deyo ri yip-yo melina-i-p  
 you.DU wood house-LOC carry.inside.PL.O-DU.A-IMP  
 ‘You two, carry all the firewood inside the (kitchen) house!’ [IV,79]

The following examples illustrate the suffix *-wepi*. Example (24) combines a suppletive plural with *-wepi*.

- (21) *pper kiniyo bamonwepko*  
 pper kiniyo ba-mini-wepi-ko  
 gourd many FAC-come.hither-QUANT.S-FAC  
 ‘Many gourds have come up (for harvesting).’ [Text D.1 Sequence 2]

- (22) *ko dop sipiwepi*  
 ko dop sipi-wepi  
 I body hurt-QUANT.S  
 ‘My body hurts all over.’ [V,106]

- (23) *Buoko buar wepulo yena kiniyo leliwepu*  
 Buoko buar wepulo yena kiniyo lelie-wepu  
 Buoko axe bring.PP people all kill-QUANT.O.PP  
 ‘Buoko took an axe and killed all the people.’ [Text A.6 Sequence 23]

- (24) *uki kopi ri puk lil lupapwepu palouyo*  
 uki ko-pi ri\_puk lil lu\_papi-wepu  
 husband 1SG-POSS kind.of.tree blood incise\_do.PL.O-QUANT.O.PP  
 palou-yo  
 spear-LOC  
 ‘My husband filled the engravings of the spear with coloured sap of the *puk*-tree.’ [VII,148]

Example (25) illustrates event plurality in combination with the suppletive plural of the patient object.

- (25) *ko solo pusapimapi*  
 ko solo pusapi-mapi  
 I only wash.PL.O-QUANT.E  
 ‘It is me alone who does the dishes all the time.’ [VI,84]

### 5.7.2 The coding of person

In Kilmeri, the coding of person is limited to a small class of verbs. Semantically, these verbs encode the role of Recipient. As we saw above, the coding of Patients involves number, but not person. Kilmeri has two- and three-place verbs that require agreement with their Recipient objects, as shown in Table 5.15.

Table 5.14: Person affixes

AFFIX	GLOSS	FUNCTION
<i>-ipi</i>	1SG.OR	first person singular recipient object
<i>-me</i>	2SG.OR	second person singular recipient object
<i>-ne</i>	3SG.OR	third person singular recipient object
<i>-no</i>	3SG.OR.PP	third person singular recipient object punctual past
<i>-ini</i>	NSG.OR	non-singular recipient object
<i>-en</i>	NSG.OR.PP	non-singular recipient object punctual past

As Table 5.14 shows, there are distinctive person suffixes only in the singular. Dual and plural have one suffix which agrees with the Recipient argument. This agreement pattern is evidence for the person encoding paradigm even if the person distinction is neutralised for non-singular number values. The paradigm may reflect the old quaternal pronoun system of the Border languages which is still present in Imonda with first, second, third, and inclusive person (Seiler 1985: 44).

The verb *pona*- ‘give’ exhibits an irregular paradigm of person agreement, as in (30-32). For more information, I refer the reader to Gerstner-Link (2018: 386-394; 402-405).

The following examples (26-32) illustrate some of the verbs requiring obligatory person agreement.

- (26) *de ko lewoipep*  
       de ko lewo-ipi-p  
       you I wait.for-1SG.OR-IMP  
       ‘Wait for me!’ [overheard conversation]
- (27) *ko de wulime*  
       ko de wuli-me  
       I you follow-2SG.OR  
       ‘I’ll follow you.’ [overheard conversation]

Table 5.15: Verbs with obligatory person indexing

VERB	MEANING
<b>transitive</b>	
<i>mueli-</i>	‘tell sb; talk to sb’ (opposed to <i>mui.SG/moliye.PL</i> ‘say, speak’ without person agreement)
<i>sai-</i>	‘ask sb’
<i>pele-</i>	‘gossip with sb’
<i>woni-</i>	‘call sb; call out for sb’
<i>wui-</i>	‘answer sb’
<i>lewo-</i>	‘wait for sb’
<i>wuli-</i>	‘follow sb’
<b>ditransitive</b>	
<i>nie-</i>	‘show sth to sb’
<i>mosupi-</i>	‘show sth to sb’ (involving a change of location as the thing to be shown is at a different place)
<i>mosaupi-</i>	‘teach sth to sb’
<i>powa-/pona-</i>	‘give sth to sb’
<i>ripei-</i>	‘share (cooked) food with sb’ (opposed to <i>ripei.SG/rupopi.PL</i> ‘distribute (food)’ without person agreement)
<i>supoye-</i>	‘exchange women for marriage with sb’

- (28) *ko Eva muelno de inalap*  
 ko Eva mueli-no de ina\_le-p  
 I Eva talk.to-3SG.OR.PP you hurry\_go-IMP  
 'I said to Eva: Hurry up!' [overheard conversation]
- (29) *disaipel molo yena kiniyo mosaupoen*  
 disaipel molo yena kiniyo mosaupo-en  
 disciples(TP) go.PL.PP people many teach-NSG.OR.PP  
 'The disciples went and taught many people.' [Bible translation: Mark 6,12]
- (30) *de luo ko ar powa*  
 de luo ko ar powa  
 you money I NEG give.1SG.OR.PP  
 'You didn't give me any money.' [Text E.5 Sequence 12]

- (31) *melon de ana poname*  
 melon de ana poname  
 melon(TP) you who give.3SG.OR  
 ‘To whom will you give the melon?’ [overheard conversation]
- (32) *ko wal dû yûr su roise yano ponamo.*  
 ko wal dû yûr su roise ya-no ponamo  
 I fish flesh chicken egg with sago-INS give.3SG.OR.PP  
 ‘I gave her some fish and eggs with sago.’ [Text F.11 Sequence 12]

The examples above illustrate agreement with only one argument, namely the “dative”-object in the role of the recipient. This is due to the fact that subjects are not marked on the verb except if (i) they are dual or (ii) the verb is intransitive and belongs to the class of suppletive plural verbs. The following examples illustrate subject and “dative”-object agreement. Example (33) shows a two-place verb with subject and “dative”-object agreement. Example (34) shows applicative constructions; the verb form *melinoi* illustrates a very rare instance of indexing three arguments via suppletive plural for the direct object (Theme), the applicative for third person singular and subject dual agreement.

- (33) *koyo de wulimei.*  
 koyo de wuli-me-i  
 we.DU.EXCL you follow-2SG.OR-DU.A  
 ‘We two follow you.’ [overheard conversation]
- (34) *Leno kredimponoipno, le rapiyeno, melnoi.*  
 le-no k-redim(TP)-pi-ne-i-p-no le  
 things-INS SUB-make.ready-LV-3SG.OR-DU.A-PC-CO things  
 rapiye-ne-i meli-no-i  
 fetch-3SG.OR-DU.A carry.PL.O-3SG.OR-DU.A  
 ‘After the two of them had made ready (Sakou’s) things, they fetched them and carried everything for him.’ [Text A.3 Sequence 60]

Regarding the slots of agreement affixes, we see that the “dative”-object suffix precedes the subject dual affix.

### 5.7.3 The coding of animacy

There are two verbs that encode animacy: (i) *riye* ‘see sth’ (35) vs. *reye* ‘see sb’ (36), and *rili* ‘see several persons’; (ii) *reyane* ‘meet sb’ and *relane* ‘meet several

persons'. The animate form is also used for higher animals. In fact, the verb *riye/reye/rili* combines animacy with suppletive number.

- (35) *dob de riyoworo*  
 dob de riye-we=ro  
 eye you see.O.INANIM-TER=EMPH  
 'You watch out attentively!' [Text B.6 Sequence 27]

- (36) *ono bekulu pu ipiyo pin dob ko reyo*  
 ono bekulu pu ipi-yo pin dob ko reyo  
 man huge water bottom-LOC come.up.hither.PP eye I see.O.ANIM.SG.PP  
 'A huge man came up here from the bottom of the water, I saw him.' [Text B.6 Sequence 30]

## 5.8 Voice related constructions

Kilmeri has three types of constructions that can be broadly described as voice-related. They express reciprocity, malefactive source, and applicativity. There is no active-passive distinction in Kilmeri, i.e., the language follows the usual pattern of Papuan languages.

Reciprocity is marked by the suffix *-paye*, as in (37) and (38). This suffix shows several assimilation patterns (Gerstner-Link 2018: 422; 527-531).

- (37) *uke bono pokapayo.*  
 uke bo-no poka-payo  
 we.EXCL word-INS scold-RECP.PP  
 'We scolded one another with words.' [V,96]

- (38) *iki wako mekiyayep.*  
 iki wako meki-yaye-p  
 APH.PL amongst help-RECP-PC  
 'They were helping one another.' [VI,122]

The malefactive source of an action is indicated by the suffix *-maye* (Gerstner-Link 2018: 409-410). Malefactive constructions are always transitive. The participant against whom the action is directed may or may not occur in the clause, as in (39) and (40) respectively.

- (39) *sukupu dop sei sowemayo.*  
 sukupu dop sei sowe-mayo  
 bush.spirit body white hide-MAL.PP  
 ‘The bush spirits hide from the white man.’ [Text B.2 Sequence 42]
- (40) *de smep musimayo upunaro.*  
 de smep musi-mayo upuna=ro  
 you door lock-MAL.PP good=EMPH  
 ‘You locked the door, very good [to prevent thieves from entering the house].’ [overheard conversation]

Applicative constructions increase the number of participants of a verb. They can be used with intransitive and transitive verbs. The applicative suffixes are identical with the person marking suffixes. Most often applicatives occur with the third person, but they also can occur with first and second person (Gerstner-Link 2018: 405-409; 445-451).

- (41) *de kaeli kopoipem.*  
 de kaeli k-pi-ipi-m  
 you strong PROH-do-1SG.OR-PROH  
 ‘For my sake, don’t be stubborn towards me!’ [overheard conversation]

Text F.11 *Bo Milipiro* ‘Mili’s sickness’ illustrates abundant use of applicativity as all the actions of the hospital staff are directed to the sick girl Mili, i.e., the verb inflections show third person singular agreement.

## 5.9 Serial verb constructions

Serial verb constructions are a major syntactic device in Kilmeri. In principle, verbs can become a component verb of a serial verb construction without any semantic constraints. For example, there are many lexicalised serial verb constructions whose meaning emerges from the idiosyncracies of two single verbs. Serial verbs usually consist of two verbs, but can also consist of three verbs. Suppletive plural forms can also occur in serial verb constructions (see *moliye* in Table 5.16).

Table 5.16 gives an overview of the standardised verbs that have a predictable meaning in serial verb constructions. Note that there is also stative serialisation in which positional verbs (and also the verb *nui* ‘sleep’) can occur as the first element. Moreover, there is lexicalised serialisation, in which some serial verbs constructions have fused together to form verbal compounds.

Table 5.16: Standardised serial verb formations in Kilmeri

VERB	TRANSLATION	FUNCTION
<i>_nake</i> <sup>a</sup>	‘sit’	aspectual: durative
<i>_wole</i>	‘move further’	aspectual: completive
<i>_paye</i>	‘leave behind’	reciprocal
<i>_kûne</i>	‘go down’	directional: ‘downwards’
<i>_pake</i>	‘throw’	directional: ‘downwards’
<i>_pepe</i>	‘put on top’	directional: ‘on top of’
<i>_pane</i>	‘do thither’	directional: ‘away from’
<i>_mini</i>	‘come here’	directional: ‘towards’
<i>_ppue</i>	‘go up’	directional: ‘upward’
<i>_pini</i>	‘come up here’	directional: ‘up to here’
<i>dori_</i>	‘turn back’	spatial: ‘back’
<i>buri_</i>	‘go ahead’	spatial: ‘ahead’
<i>ina_</i>	‘hurry’	modal: ‘quickly’
<i>_maeu</i> <sup>b</sup>	‘belong to’	possession, e.g. ‘as mine’
<i>moliye.PL_</i>	‘several speak’	speaking while moving
<i>_pue</i>	‘stroll, walk around’	hetero-kinetic motion verbs and <i>riye</i> ‘see’
<i>_laye</i>	‘put, lay’	spatial: two-dimensional expansion
<i>_piye</i>	‘take’	reinforcing verb meaning

<sup>a</sup> The underscore (\_) shows the position of the non-standardised verb<sup>b</sup> This verb may precede or follow the non-standardised verb

## 5.10 Complex sentences

In Kilmeri, complex sentences are often construed without any grammatical marking, that is, via juxtaposition of clauses or inflected verbs. Sequentiality of events is indicated by a complex affixal structure on the verb: *k-verb-p-no* [SUB-verb-PC-CO] ‘after x-ing’, e.g. *k-pule-p-no* ‘after he had come’. Sequentiality marking is frequently used to achieve coherence; which often results in tail-head-constructions. We find simultaneity much less often, which is marked by *verb-no* [verb-co] ‘while x-ing’. In addition to these temporal relationships between the sentences, Kilmeri can also express the purpose of an action, in which case the verb is marked with the suffix *-na*, as in (42). A frequently used coordinating conjunction is *riyopuno* ‘then’, which appears at the beginning of the sentence.

- (42) *ko pe pakono piyeke bisa luina*  
 ko pe pako-no piye-ke bisa lui-na  
 I arrow bow-INS take-INGR rat shoot-PURP  
 ‘I’ll go get bow and arrows to kill the rats.’ [IV,125]

There is no means to mark indirect speech. Instead, the speech of discourse participants is cited and embedded after the verb *mueli-* ‘talk’, as in (43). Such embeddings can also be recursive (Gerstner-Link 2018: 487).

- (43) *ai muelne “ko duyoye le”*  
 ai muel-ne ko du-yo le  
 father talk.to-3SG.OR I bush-LOC go  
 ‘The father says to him: “I will go to the bush.”’ [Text B.6, Sequence 3]

## Part II

## Texts

# A Clan history: Genealogies and creation

Three of the texts in this chapter describe a major killing of people. In two cases, this is done by an individual in revenge for an unpleasant or morally inhibiting situation. In both stories, a large number of people are killed, namely the population of an entire village (Texts A.3 and A.6). In one of these stories, the killing is projected onto an evil bush spirit that devours the people of an entire village (Text A.3). In two stories, the killing is associated with a natural disaster, namely rain floods (Text A.6) and an earthquake (Text A.8).

One can also speak of massacres concealed by a narrative that takes centre stage. In two cases, the killing of a large number of people is probably the result of the occupation of land by new arrivals. The third case with the earthquake is more difficult to interpret. The killing can be seen as a punishment for a dance festival that somehow did not conform to the rules. This would correspond to the fact that natural disasters have always been regarded as supernatural due to their devastating consequences (Text A.8). The site of the festival and the fissure in the earth is known as Yi in the Kiliwes area.

## A.1 Am

### Introduction

The story of *Am* was originally told by Usi Kul in Onume/Omoi village in September 2000. Usi Kul tells the story of his ancestors and their way of life as he interprets it in the light of the “new world” that the people experience after the encounter with the whites. The story was then retold by Margaret Osi in an abridged version, which was subsequently transcribed.

It should be mentioned that Usi Kul also gave a version of the story in Tok Pisin. In this version he included parlando phrases which made his narrative performance very special. Most of the names of persons and clans he presented in this parlando mode. I include his Tok Pisin version as a parallel text at the end of this chapter.

## Summary & background

The text begins with a genealogical overview of the narrator Usi Kul and his clan. He then continues with the story of the ancestor Am, as announced in Sequence 5. However, in Sequence 9 a person called Bu is introduced who is supposed to fulfil people's basic needs. Am, on the other hand, is associated with the upbringing of boys and social life in general (Sequences 10-14). In the past, it was common for boys to be separated from their mothers at a certain age and grow up in a male-dominated environment. Interestingly, four women are mentioned who took care of the boys in this male-dominated world. They may have been foster mothers and even breastfed the boys. This has not been confirmed, however.

Then it continues with some historical facts about the settlement and how the settlements have changed. Access to water is important, but so is the personal connection to a particular piece of land. Finally, the story ends with a reference to Bu and Am, both of which seem to be of equal importance.

In essence, the story of Am represents the genealogical lineage of the clans of the people living in Omoi and the surrounding hamlets today. The narrator blends the local indigenous tradition with modern developments; in particular, he interprets the loss of the old male cult houses of discussion and consensus, namely the *house tambaran*, in the light of the new House of Parliament in Port Moresby, where the nationwide political debates now take place. Secondly, he integrates a Christian biblical figure, namely Noah, as an ancestor who gave the people special power, thus relating them to God as the ultimate creator. Seen from the outside, the parallelism of two completely different ancestral lines may seem strange; for the people themselves, it is very probably an attempt to anchor themselves in both worlds, the traditional and the modern. In economic terms, the ancient period is often talked about as a "golden age" in which people lived in abundance.

*Em Ipor ki mui bo Dawapyo: "Ako depi e luwali." Em Bu ki muli mosaupi. Ono kilimpo yenaro an kini. Bu ki muelo:*

This is Am's story. They celebrated a traditional ceremony. After the ceremony there was money and stone axes. The ceremony brought money and stone axes. Am played the guitar. He took the money and put it in the bag. When the people grabbed the axes, all the blades broke. They shared them. Bu gave them to the people; he gave them three. Then Am built a house. He erected one tall post supporting a platform. The people lived there. The women Paeni, Yob, Baepiye, and Sin cooked the food and took care of the children. When mothers were giving birth, the umbilical cords of the boys fell. The girls were not fetched from their mothers; the boys only were fetched to the *haus tambaran*. They accompanied them to the house, the house of parliament Siopo. The name of the house is Parliament House or Siopo House. The house disappeared. It was transferred to Port Moresby. It is now in Port Moresby. The trees Ipor and Dawar were like Bu's phone when he was hunting, when he roamed about in the bush. Bu said, "Pigs live here," and the people built hunting fences and shot the pigs from there. "Possums live here," that's what Bu was saying. "Bandicoots live here" and "Boars live here." He caught them when he roamed around in the bush.

Bu also watched the people's conduct: "Your wife has sex with a lover." Ipor and Dawap were uttering these words,

*“Tripela wiyo, ere ere ere wiyo.”*

*Kupulupipno yena rais ileulipop, yena rais nop. Due komoipno riyo sonipop, yip riyo palimen yip. Pu paekyo lulipop, ep epi rka rka. Paua. Noah ki wokimpo, Noah Noah ponamo. Yena ke God ruri, yena ke God plas. Yelo roise po, wokimpo Am.*

*Wapi diri kepro Boyau, Bu Ilop diri kep, roki kamapimporo uke oki nake. Moni pastaim uke maloro, moni ukeyo polip moni dere. Ukeyo solo polip, Öu dere mi ukero muli Öu klen. Kup-uapno, Wiba Yaebu kinapno Omoi siyui, Pupulboli. Yaebu bilong Waes dere, Wiba bilong Öu dere. Yaebu third komanoko, ruwaesi nambawan ipei kopi. Mi Yaebu third karimpo.*

*Pupulboli pu ulno ipiyopi. Pu kipi-yapno wepuloi, Bu ponamoi. Yena ro kiriyapno yilau layepanepo. Onume layepanepo, Omoiyo molo. Nau ol i stap long Omoi, Omoiyo mape. Ko mi-dorilo. Mi ko Onumeyo nake, yelo riyoro iki nakapno bonporo, yilau uke bonporo. Ko o lo. Oki yelo kopi yilau kopi.*

but Bu provided the information. So they killed the lover, five people altogether. Bu was talking to them. Three of them took the corpse.

When they came to the land, the people used to eat rice. When they felled a sago palm, they processed the sago in that house, in the Parliament House. In swamps, they washed the sago pulp in the water. They rinsed it properly, and the rinse water streamed to all sides. Noah created the power and gave it to Bu. All the people are children of God. They are the sperm of God. He created them and the earth. He created Am.

Wapi and his younger brother Boyau, Bu and his younger brother Ilöp come from here where we live now. When we first heard about money, we already had money and richness from the ancestors; it was simply with us. There was also the Öu ancestor, the Öu clan. Wiba and Yaebu came to the land here, they founded Omoi by digging the well Pupulboli. Yaebu is a Waes ancestor, Wiba is an Öu ancestor. I named my firstborn child Yaebu; I begot the third Yaebu.

They filled bamboo containers with the water from Pupulboli (cf. Texts 2.8 and 5.5). They filled them up and carried them and gave them to Bu. When the people saw this, they left the place. They left Onume and went to Omoi. Nowadays they live in Omoi. I went back there and lived in On-

*Onume Onume Aewanup Aewanup,  
Omoi Omoi. Ukero kamapporo yilau  
riyo.*

ume in the place the ancestors used  
to live. They had been born there, and  
we have been born there. I went back  
to my place: Onume, Aewanup, Omoi.  
We finally arrived at that place.

*Noah Noah em karim dispela graun,

<sup>1</sup>It may be that this sequence refers to the appointment of Am as leader of the clan after the death of his father Kupi. In Nimboran society such an installation was done with a big feast that lasted over days (Kouwenhoven 1956: 29-33).

<sup>2</sup>It is not clear what kind of items the numeral “three” refers to; maybe the narrator wants to say that Bu gives three new axes to the people.

<sup>3</sup>Traditionally, the women preserved the umbilical cords of the newborn babies. The dried umbilical cords were believed to have an effect on the baby’s sex. If they had children of one sex only, they used the cords in the following way: If a mother had only girls and wished for a boy, she put the last umbilical cord into the rib of a *duam*-palm, a type of sago palm with thorns. If a mother had only boys and wished for a girl, she put the last umbilical cord into the rib of a *numomo*-palm, a type of sago palm without thorns. (Margaret Osi, p. c.). The House Siopo is most probably identical with the *house tambaran* which was abandoned after the Mission had settled in the village of Ossima. The *haus tambaran* was the place where the men used to debate any kind of topic regarding village and life.

## **Background on the Tok Pisin Version**

Before Usikul told his story in Kilmeri, he narrated the clan's history in Tok Pisin. The content of the Tok Pisin version differs slightly from the Kilmeri version. Usikul mentions names of people and places that are not mentioned in the Kilmeri version, and vice versa. Interestingly, the narrator speaks of two *tokples*, or vernacular languages/words, that must have existed on the southern slopes

of the Oenake Mountains when the Bu clan arrived (cf. 4th paragraph below). These vernacular languages are hinted at by the words *ru* and *bar*, which are repeated in a long parlando. The parlando mode, which is used for important names throughout the narrative, gives these words a similar significance. On another level, these words are proof that the Kilmeri people migrated to this area from elsewhere. See also Text A.2 below, in which the ancestor Si is described as “the appropriator of the land.”

The people who lived there prior to the arrival of the Kilmeri were Sko-speaking people (Donohue 2004: 5; Corris 2006: 3). In present-day Vanimo [Dusur], we find the word *va-nu-(pa)* [person-which-(particle)] meaning ‘who’ (Ross 1980: 100). The single words *va* ‘person’ and *nu* ‘which’ could be related to *bar* and *ru*, included by Usikul in his clan history. One could also think of the Barupu language, the easternmost language of the Sko family (Corris 2006: 2). The place Asue, now a hamlet, may have been the place where the women handed over their male babies to the four legendary women mentioned by Usikul in his Kilmeri version of the clan history.

The ancestral clan branched out into many lines and lineages. In Tok Pisin, the words *bruk* ‘split’ and *kil* ‘line, mountain ridge’ are used to refer to this.

mouths still had to be opened; God had not given them the power yet.

There was prosperity here. Then this man, he then broke all blades which had come here. He carried this house. Bu is prosperity, Bu.

Then our people split. Our mountain ridge was inhabited, Oru Diri. Now it's this ancestral line, this prosperity that came over us. Ilöp. Ilöp begot us, he begot Kasi and Dowo. That's it. We were begot, the line came down to Apai. Apai begot my father, Kul. That's it. Kul begot me. Yes, that's it. Then the line split. There are three in our line now.

We are three. The line of Bi, yes, there are only girls. ... We are three clans. There is only one father who begot us. He begot the three brothers. And they are Sawa, Sa and Nani. It is this line that came, it's this, only this. No big line to let us grow. It's this line, Sa and Nani. ... The line will decline, there won't be a big place. ... This line, eeeeh. Sawa and Nani now. They two live in Krisa.

Two ridges. There we are located, the villages Omoi, Omula and Oiru. This ancestral line came, one only. Then it split. They went to Eke in the direction of Omula. We live in Oimu, Eke,

<sup>8</sup>The word *kil* is always accompanied with drum beats.

Oiru and Ossima. At all places. One  
ancestral line.

That's it. Noah, Noah, it's the place  
of Noah. The place of Noah. It's Asue,  
Asue, it's a place near the river, Asue.  
The women put their babies there,  
their babies.

## A.2 Si yelo piyo

### Introduction

The story *Si yelo piyo* ‘Si took the ground’ was told by Margaret Osi in Ossima village in August 2004 and again in February 2007. The story describes the settling of the clan land, the most important event in the history of all Kilmeri-speaking clans. The text was spoken very slowly. Margaret paused repeatedly to recapitulate the generations and the people correctly. She produced the genealogy in August 2004 without being prompted.

### Summary & background

The text provides the genealogy of the clan of Lis Osi, late husband of Margaret Osi (Sequences 1-5). The social organisation of the Kilmeri is strictly patrilineal. Lis Osi is a member of the greater Imop clan that split into several subclans whose members now live in Ossima, Isi I, and Isi II, respectively. Lis Osi is called *Imop eme*, which means ‘of Imop origin’.

The second part of the text describes Si’s land appropriation, starting with Sequence 6. Some of the sections of bush claimed by him are named and explicitly listed here, and the names go back to people who died a long time ago. In Sequence 8, the separation of the lineage between Isi Daru and Ossima is mentioned. The long journey of Si corresponds to the fact that the eastern villages, including Ossima, are the furthest away from the swampy basin around Bewani, which is where the first arrivals from the west came. This migration route of the Kilmeri can also be verified linguistically (Gerstner-Link 2023). The journey itself is not mentioned; the main purpose of this narrative is to substantiate the land claims in the Puwani-Pual basin.

The importance of this kind of oral tradition is shown by the fact that Margaret Osi recited it to me twice, three years apart. Today, land claims are crucial for the distribution of royalties from logging.

### Parallel text

*Si yelo ki piyo. Si dere Waiapi Yauyo. Si Bu Nakei Woreau Peiyo Sui Senyo Bewo Yaewiyo Wesei Eppi ... Eppi, Dipiai ... Dipiai. Oki Yau Waia Bilou. Waia Saewi Bilouyo karimpowe, Bilou Saewiyo. Bilou Bawi karimpo. Lis Waia*

Si appropriated the land. Si is Waia’s ancestor and Yau’s. Si, Bu and Nakei, Woreau and Pei, Sui and Sen, Bewo and Yaewi, Wesei Eppi ... Eppi, Dipiai ... Dipiai. Oki, Yau, Waia, Bilou. Waia begot Saewi and Bilou, Bilou

and Saewi. Bilou begot Bawi, Lis be-  
got Waia. Saewi begot Lis, Lis begot  
Waia and begot Yau ... begot two Imop,  
two Imop.

Yau is naming Kili, the Kili bush is  
here, the Imop bush, the Dipei bush.  
The persons whose names are given to  
the sections of bush are all dead.  
Then the Kili people live there. They  
have come to the site. Si, he took the  
bush. Si truly took the bush, Oimu,  
Iwanbi, Lûli and Saepu, Dupuopli.  
Lûli and Saepu, Dupuopli. This land  
he took. Si lived there with his sons.  
Yaewi and Bewo. Yaewi goes up to-  
wards Isi Daru, Bewo stays here. Si  
walked and walked, he named Kili and  
Isi. I am Si, I live here in Ossima. He  
appropriated the land, he came here  
to the site.

At Oimu, Bu lives. Iwanbi, Lûli and  
Saepu, Dupuopli is his, the forest,  
the land. Si came here to these sites:  
Omupaek, Ouwin, Ye, Win, Duppua,  
Diyewi, Omal, Bal, Oli, Lil, Oipol,  
Ipol, Akos, Ono, Pusuwei. This bush  
is Waia's, Yau's, Jerome's. If some-  
one takes the land, they are now re-  
claiming it with these names. Silkum  
belongs to Waia, belongs to Yau ...  
Silkum. The mountain Mamal is up-  
river.

 ‘(Si) came to the land: Omupaek, Ouwin, Ye, Win, Duppua, Diyewi, Omal,  
 Bal, Oli, Lil, Oipol, Ipol, Akos, Ono, Pusuwei. This bush is Waia’s, Yau’s,  
 Jerome’s. If someone takes the land, they are now reclaiming it with  
 these (names).’<sup>14</sup>

<sup>12</sup>The names Isi and Osi are quite probably derived from deictics and the ancestor’s name Si: Isi literally means ‘there-Si’ and Osi means ‘here-Si’. However, the original deictic centre cannot be reconstructed. Most probably, the names should reassure his vast appropriation of land.

<sup>13</sup>The possessive pronoun ‘his’ refers to the lineage of Nakei, the second son of Si, while Bu is Si’s first son.

<sup>14</sup>Traditionally the father allots the bush sections of the family to his sons in life, and, by doing so, avoids disagreements after his death. The name Ye actually refers to a person, as Margaret inserts in Tok Pisin. This insert is not transcribed.

---

<sup>15</sup>This is the end of the Kilmeri text. Here Margaret switches to Tok Pisin and continues in Tok Pisin with the reconfirmation of the land claims of Lis Osi’s sons towards any other claims by far relatives or newcomers.

## A.3 Sakou

### Introduction

The story of *Sakou* was told by Margaret Osi in Ossima village in August/September 2000. This is a creation story from the real world. The creator is Sakou. In later remarks on this story, Margaret compared him to Jesus, who also provides people with everything they need. Note that the text contains a considerable amount code-switching to Tok Pisin.

### Summary & background

The story recounts the creation of the “golden world” in which the Kilmeri once lived. Sakou was the creator of all kinds of food, especially wild animals and sago. He grew up as an abandoned boy far away from his family and lived alone in the forest. By staying in a tree, he was able to sustain himself. Through clever behaviour, he also managed to trick an evil bush spirit and get rid of it. He eventually moved to a second tree that grew very tall. Two sisters were living in its crown and took care of him. When the bush spirit returned, the three people tried to trick it. At first, the two women tried to overpower it, but without success. Finally, Sakou came up with the idea of feeding the people of a village to the bush spirit. The bush spirit was unsuccessful in devouring a large man, whereupon it died. After the bush spirit’s death, the three returned to Sakou’s original village, where his nephew recognised him as his uncle. The clan welcomed him, but Sakou saw that the people were eating poor food. So he showed them what he himself was eating. Whilst the people were asleep, he scattered all kinds of seeds on the ground, and after sunrise, in the early morning, the world looked different and offered plenty of good food. Since then, all the clans have been living together with Sakou.

The outline of the story is: (i) The hero grows up away from his family, (ii) he defeats a bush spirit, sacrificing the inhabitants of an entire village in the process, (iii) he receives support from two women, (iv) he returns to his people and his village and helps them to a much better life.

An interpretation of the story leads to the question why an entire village was sacrificed. We can even rephrase the question as: The inhabitants of which village were massacred? The answer to this is speculative, but it may reflect the fact that the Kilmeri invaded the Pual Puwani river basin. So the story would describe the displacement and killing of the putative former inhabitants. These earlier people may have travelled inland from the coast and had a different diet,

more fish and less sago. This would explain two details of the story. Firstly, even Sakou's own people had "fish mouths"; and secondly, Sakou was the creator of wild animals and various types of nutritious sago. In addition, the bush spirit, as a representative of evil, is a legacy of the forest people inland.

I will tell a story: Once upon a time there was a man, his name was Sakou. His sisters threw him into the river, their names were Ipp and Sal. The river carried Sakou away, but a *kup*-liana clung to him and he held on it. Holding on to the liana, he climbed up from the mud onto the riverbank. He looks up: "There are a lot of ripe *woppuo*-fruits." Having climbed the tree, he sat on one of its branches. He plucked some fruits and ate them; then he looked down.

In the meanwhile a cassowary had come and was eating ripe *woppuo*-fruits. It came again and was eating more fruits. Sakou thought, "What do I do now?" His hand ran through his hair; there was a sharp cassowary bone in the hair. He pulled the cassowary bone out of his hair. Then he plucked ripe *woppuo*-fruits and pierced them on the sharp bone. Afterwards, he threw the speared fruits down to the cassowary. As the cassowary ate, he could not swallow the pierced fruits, because the sharp bone got stuck in his throat. So the cassowary would surely die. The cassowary died. It was dead. "What should I do now?" Sakou called out to his sisters in the village; he called and called

*Sakou umul senek, "Dari werino ipulero yena ba roisero." Ari. Sakou umul senek, "Ari, oke mi sukupu ki pulo." Min dopyo, woppuo boliyo nekip. Kupulapno dob seppuo, "De ke woppuo aeppu niro. Masalai oke, ko yala koniyam. Sukupu oke, oke ono pari. Oke masalai, ou." Bikero lilip, muelno: "Bike puenpep, ko dob powe, de kûnap!" "O o, ko ke asa kûnam? Oki de puenpep!"*

*Woppuo roke nowap, amainu. Am app sayap. Sakou dob pop, puenpep. Pili kep yana royo, dû kep yana royo, kili kep yana royo. Eli pûke. "Eli, ko asa pi?," sukupu muelne. Sakou muelne: "Eli de sewili numuelyo, yorer. Pu kip-puyo lili, de sewili bike eli." Welro sepue.*

for them, but no one answered. The older and the younger sister, nothing. A bush spirit answered him. Its name is Sukupu. So the bush spirit came. When Sukupu had come, Sakou called out again and the spirit answered him.

Sakou thought, "The two sisters are coming, together with other people." But no, it wasn't them. Sakou realised, "No, this one is the bush spirit again who came." It came closer and stood at the foot of the *woppuo*-tree. When the spirit had come to the tree, it looked up and said: "You are eating ripe *woppuo*-fruits, give me some so I can eat them." Sakou rushed and climbed further up, throwing down to it some ripe *woppuo*-fruits. The bush spirit tasted the pulp. It swallowed the fruits, and they fell right back out of its arse. Sakou was thinking back and forth, "What should I do now? The bush spirit could devour me. It is a bush spirit, not a human. Yes, an evil spirit." The dead cassowary was lying there, and the bush spirit said to Sakou: "Cut up the flesh of the cassowary! I'll watch you do it, come down!" "Oh no, how am I supposed to get down again? Here, you cut it up yourself!"

The *woppuo*-tree started growing, it became tall and almost touched the sky. Sakou watched as the bush spirit was carving the cassowary. The spirit put the skin in one pile, the meat in another pile, and the bones in a third pile. The intestines were hang-

*Riyopuno eli pulolu, epo popiyo, puyo pusiyo.*

*Sakou kukûnapno yeloyo, bike dû pele pili piyo. Puop namo. "Dû ko ar muli, oke ko pili powaip, dû ke ko delaine." Nep muelne: "Ko misoru, ari, dû ke ko delaine, ko pili powaip!" Pili namo, mappeyo. ing out. "The intestins, what should I do with them?" the bush spirit asked him. Sakou said to him: "Carry the intestines far away, very far away. After all, the river is far away, you take the cassowary's intestines there." The spirit ran off carrying them until it finally emptied the intestines. The bush spirit rinsed out the faeces and washed the intestines in the river.

Having climbed down to the ground, Sakou took the meat, the rib bones, and the skin of the cassowary. He gave Puop, a friendly spirit, some of it. Yet Puop said: "I don't want meat, here, give me some skin! The meat pushes me down because of its weight." Nep, also a friendly spirit, said to Sakou: "Me neither, the meat is too heavy for me. Give me some skin!" He gave him some skin, and Nep cooked it. Sakou went on to Sakum, and Sakum said to him: "Give me skin, I'll cook it!" He went on to Epul, the next friendly spirit, who said to him: "Neither do I, the flesh presses me down. Give me skin!" Sakou went further on. Having come to Muem, the last friendly spirit, a termite, Muem said: "Give me a small piece of meat! All the other meat you carry up the mountain!" Sakou went up there, far and high. He carried the cassowary's meat and gave it together with his own things to the two sisters, Bo and Bapul. He lived with Bo and Bapul, and they took care of Sakou. When he had climbed up the tall tree, Bo

*Sukupu riyo puloro, "Eh, arka lo?" Sakou dorka ki yek. Puop sano: "Oh, ko pili powaikap! Lap, oki le." Igo Nepyo. Nep muelne: "Ko misoru, pili ko powaikap!" and Bapul accommodated him.<sup>16</sup>

Then the bush spirit returned to the place where it had encountered Sakou, "Ah, where did he go?" So it followed Sakou's foot steps. Then the bush spirit meets all the friendly spirits, too. Puop asked the spirit: "Oh, give me some skin, then go this way!" The bush spirit continued to Nep, and Nep said: "Me too, give me some skin, too!" Then Eppul said: "Me too, give me some skin of the cassowary!" The bush spirit went on to Sakum who said: "Me too, give me also some skin!" At last the spirit quickly came to Muem who said: "Give me a small piece of meat, I have none! Go up the mountain!" The bush spirit replied: "Did you catch him?" "Oh no, I didn't, I never catch people."

The mountain grew and grew as the bush spirit climbed up. The two sisters sitting above in the tree cut the rope through, and the spirit fell to the ground. It lay there as if it were dead, but eventually it got up again.<sup>17</sup> "Ah, I was fast asleep!" Then the bush spirit climbed up again, as before, further and further up. Bo and Bapul boiled hot water and said to it: "Open your mouth and leave it open!" The bush spirit climbs up and holds its mouth open. They poured the hot water into its mouth. The spirit fell backwards to the ground. It lay there as if it

<sup>16</sup>There is an inconsistency: Muem, the termite, speaks of a mountain to climb up, while Bo and Bapul, who take care of Sakou, live up in a tree. Living in a tree matches the oral tradition that is present in Text A.1, the story "Am".

*bekulu bulika nekip. Moni mike bako-nupko. Yena moni kukonupipno, ekuka masakaikûno. Ikoipuno ono ikoi bulika nekip. Ki koniyouro, paliya, basuiko. Riyopuno piyeip, yipyo panapo, sù piyamu. Sù paloyo layepanepo. Sù beriro. Ūli kep pulwolo.*

*Riyopuno Sakou roise Bo Bapulyo uke-inakap. Sakou muelno: "De rapiyekap!" Sakou loro, riyo piye. "De amulip o?" "O? Ro pari, ko ke ba mulip. Ba piyekap!" Loro. "Ou, ko ro mulip, upuna. Koyo ro mulip, upuna."*

were dead, but then got up again and climbed up anew. "What do we do now? We heat stones in the fire", and the sisters heated stones. The bush spirit opened its mouth wide as it climbed, and they threw stones into its mouth. Again it fell backwards to the ground, lay there and got up the third time. "What should I do now?" Sakou thought together with the two sisters. This is where Sakou brought the people of the village. All the people of the village came together there. Most of them were little people. The little people stood in line, and next to them a huge man stood. The little humans were devoured first by the bush spirit. It swallowed them, and they fell out of its arse in large numbers. Finally, the huge man stood next to them. The spirit tried to gulp him without success, then it died from this. Eventually Sakou and the sisters brought the dead spirit into its house. They collected firewood and set fire on the sago palm leaves. While the fire was blazing, the bush spirit's gall bladder burst.

Sakou then went on to live with Bo and Bapul. They said to Sakou: "Go and get us something!" Sakou went and brought something, and he asked them: "Is this what you wanted?" "No, that's not it. I wanted something else, go and bring something else!" So off he went again. "Yes, that's what I

---

<sup>17</sup>The rope must have been a tool for climbing up the mountain; before it was said that a tree grows almost to the sky (cf. Sequence 22). The details of the scene are not entirely clear.

wanted. All right, that's what we two wanted."

Having finished with his things, they took everything and carried it for him. They accompanied him to his village, carrying the sago flour and all the belongings. They went to his home village. People were playing ball there. During the game, the ball came close to Sakou, who was standing at the foot of a banana tree. He held the ball firmly with his foot.

Sakou's own child, his nephew, had already looked for the ball and got it. "My uncle! I really thought you died long ago!" "No, I did not die, I am still alive, yes!" The nephew went and told his father and mother: "My uncle was alive the whole time!" "We threw him into the river." "No, he didn't drown, he has come back. He is standing at the foot of the banana tree there. My uncle has returned." They hugged him and wept. Then they escorted him to the house. Having escorted him, Sakou said to them: "What are you eating?" "We eat this kind of food." "Oh no, this is just earth." Their mouths were very small, like those of fish in water. "I eat this food here. Wash your mouths!" He gave them this food, the meat of the cassowary. First the people vomited. The second time they also vomited. The third time he gave them meat, and they did not vomit. Their mouths have become larger. Sakou gave them meat again, once,

*Iki ke sukoipu nip. Yena duyoy molo, moloro. Löina wepulupip ba. "Eh, bi ope ine asa ile? Ppulae pi, maki ari. Oke ko ke ba niwe, ppulae pi!" Kaikai kepro wepuloro. Sakou yena ukenakap. *Bo Sakoupi kuru, bo maki.*

twice, three times. All right, they liked it. "Now you are eating properly."

But they still ate millipedes. People went into the forest, and shouting *löi löi löi* they brought millipedes home. "Ah, how do you eat this meat? It's bad, it's not good. No, this stuff, I never eat it, it's bad!" He brought his own food, and Sakou continued to live together with the people. People from other clans also came there, and Sakou said to them: "For one night we will all sleep together." The people fetched all kinds of food and water and firewood, and Sakou repeated: "For one night we will all sleep together." The people obeyed and finally slept. Then Sakou threw around sago seeds, pig bones, bird bones, bandicoot bones, cassowary bones, all sorts of bone. He threw all these bones around. He created the animals. The cassowaries call *kri*, the boars call, the birds call. Dried sago ribs also fell down. Finally it is early morning and people looked in amazement: There were *duam*-palms in abundance. Everywhere stand *duku*- and *duam*-palms, *dikana*- and *numomo*-palms, all kinds of palmtrees abound. Cassowaries and wild boars were calling, birds were singing. It is early morning and the darkness is over.

Sakou's story is over. It's a good story.

## A.4 Haus Tambaran

### Introduction

The story *Haus tambaran* was told by Margaret Osi in Ossima village in February 2000. The Tok Pisin title, given by Margaret herself, refers to the male cult house. The text contains references to older customs.

Note that the text shows some code-switching to Tok Pisin. For example, food is only referred to by the Tok Pisin word *kaikai*. Although the story is told in plural with exclusive *uke* ‘we’, the agentive suppletive plural *ile* ‘eat.PL.A’ of the verb *ni* ‘eat’ is not used. Instead, the singular inflection *ni* is used.

### Summary & background

The text is Margaret Osi’s personal recollection of the time and lifestyle before modern development came along with the Australian colonial administration and the Catholic mission. Margaret was about twenty years old at the time the mission was established. As a teenager, she would accompany her father to Vanimo and experienced the early days of the town. However, life in the bush was still very traditional back then. Margaret’s generation is thus the last to have grown up on the firm ground of indigenous heritage.

The stories of *Am* (Text A.1), *Sakou* (Text B.2), and *Haus Tambaran* all revolve around the availability of food. The heroes *Am/Bu* and *Sakou* are well known for providing food, and the stories are dedicated to their memory. The ceremonies that took place at the *haus tambaran* likewise served the purpose of securing food. The staple food that is mentioned again and again is sago, together with game meat. Such food is the basic prerequisite for any further prosperity. Interestingly, rice is also mentioned as a foodstuff in the story of *Am* (Text A.1, Sequence 22).

### Parallel text

*Ko bo mosaupi.*

*Haus tambaran ipei uke ba riyo. Haus tambaran ppusi uke riyo, Saul Bopule Iwan uke riyo. Uke kiryapno kaikai kero oso kiniyo ukeno. Kaikai ukeno nakap, kaikai kep kiniyo. Uke nako, kaikai sosolo polinakap. Kaikai kusono nakap, kusono nakap.*

I will tell a story.

The male cult house of highest rank we did not see. But we saw the second ranking cult house, the Saul Bopule Iwan house we saw. In the presence of this cult house food was abundant; we jointly ate enough, even generously. Food stayed with us, the variety given

uke sosolo nakap.*

*Emkapuno kaikai mono arka loro, arka  
loro? Ai kopi, nuni kopi, memi kopi  
muelipi: "Bese makina yasiye, ral ma-  
kina yasiye, yesi makina yasiye, yala  
de monanem." Kaikai oke ko wili, yala  
kūnam, yala sepolam. "Biopo makina  
yai, kakaruk makina yai, de mek ino  
ire."*

*Kaikai ke yala basepolopisiko. Ari. Kai-  
kai arka loro? Kaikai bepu noro, bi  
noro, ari. Bipo ke epeyo polip. Kai-  
kai kana walpuap, wal kana walpuap,  
bermepu due bepu kana walpuap. Ukero  
nep. Yalaka ari. Kaikai mi klokni, mi  
ukero klokni ni. Kloknina sepiyowolo-  
pisiko.*

by the culthouse's rituals was plenti-  
ful. We were born, and food like this  
was always around. There used to al-  
ways be something to eat, always.

Then the white people came to our  
place. Having come they lived with  
us, and the mission became more and  
more crowded. When they had settled  
down, they proclaimed the word of  
God to us, and we heard it ourselves.  
Before we didn't know the word of  
God. We lived, we simply lived. Hav-  
ing accepted the word of God, yes, we  
had knowledge of a good word. Before  
we didn't have the word of God, we  
were just living.

Where did the food sources go some  
time ago, where did the food go? My  
father, my uncle, my grandmother,  
they used to tell me: "Plant *tulip*-trees,  
plant *ral*-trees, plant *aibika*-shrubs.  
Keep your garden well, otherwise you  
will not eat vegetables." The kind of  
food I used to carry home from the  
garden, will become less and might  
disappear. "Take good care of the pigs,  
take good care of the chickens, then  
you will have a sweet mouth."

Now the food has vanished com-  
pletely. Where did the food go? The  
food we ate was sago grubs and pigs.  
Not anymore. Back then this food  
was abundant. Food was spreading  
quickly. Fish were spreading in all  
creeks, sago grubs were cultivated  
at many places. We could always eat  
more than enough. Nowadays, there

*Buai kupulapno moni mipulo. Ere mile, ikoina melippue moni. Yala ko ikoina ar ni, ar ni. Kaikai buaiپی moni ikoiele. Uke sosolo mape, moni aska. Uke dili-peli, uke ikoina nip.*

is but one piece of food available. No abundance. When hungry we have just one bit of food. Occasionally, there was complete lack of food everywhere.

After the whites arrived, more and more money came in. Here it goes and goes, the price for food has increased considerably. Now I don't eat much, I don't eat much. White people's food is very expensive. We live like this, we don't have money. If we earned money, we would eat a lot.

Figure A.2: Margaret Osi appreciating food

## A.5 Wapues

### Introduction

The story of *Wapues* was told by Margaret Osi in Ossima village in February/-March 2000. The protagonists of the story are Wapues and Siyu. Wapues is a girl from Omula, who meets her designated husband Siyu from Ossima. The story confirms the relationship between two clans that have settled in different places along the Puwani River. This oral history was known to Lis Osi of Ossima (upstream on the right bank) and Iwei Wai of Omula (downstream on the left bank).

The text shows some code switching to Tok Pisin. Indeed, Margaret Osi began the story in Tok Pisin. This is presented and translated in the first three paragraphs of the parallel text version, but it is omitted in the interlinear text version below.

### Summary & background

The young girl Wapues was abandoned by her family and left alone in the bush. One day, a stranger came to her bush house wanting to stay with her. He looked ugly, black and fat and she wanted to get rid of him. While she was away in the sago swamp, he went to the river and cleansed his body of all the salt it contained. In this way, it is said, he introduced people to the resource of salt. Consequently, his appearance changed, and he became young and handsome. As a result, the girl accepted him as her husband, and they had five children. Together with their son, Wapues' parents left the old village of Ossima to look for a new, perhaps more resourceful place. Wapues and her husband Siyu stayed in Ossima.

The name Siyu suggests that the bearer's ancestry goes back to the ancestor Si. Possibly the name means 'Si place' and contains the noun *yo* 'place'. The name *Siyu* was sometimes pronounced as *Siyu*.

Interpretation and message: The story bears witness to the founding of a new settlement, the present-day village of Omula and its surroundings. It also attests to the common practice of exchanging wives between clans, as Wapues' clan is obliged to provide wives to Siyu's clan that settles in Ossima. The girls had to give up their ties to their families in favour of their husbands' families. This does not seem to have been easy, as shown by the image of the adult Wapues still clinging to her mother's breast. Wapues is reluctant to fulfil her marital duties.

Finally, the story explains the origin of salt as a resource.

I'll tell an ancient story connected to two men, Jeffrey and Barnabas from Omula. Jeffrey is from Ossima. It is about a male ancestor of Jeffrey and a female ancestor of Barnabas. I'm going to tell now. I'll speak in Kilmeri. I have already finished the story in Tok Pisin. Now I use Kilmeri.

Two people, a man and a woman. They are called Rei and Romi. Romi is the woman, and Rei is the man. They have got a girl. They have got two children. A boy, whose name I don't know. But I know the name of the girl: Wapues. Yes. All the years, Wapues has drunk milk from her mother's breast. Now she has become a big girl. Her mother's breasts have no milk anymore. No milk anymore.

Wapues goes to the garden. She comes back to the house. And promptly she hangs on her mother's breast for drinking. This continues for three nights. The next morning she goes to the garden again, and to the sago swamp. She pounds sago pith, takes it and fills a basket with it. Then she collects aibika leaves, fills her basket and carries the baskets home. Having come to the house, she wants the breasts again. She wants to drink milk again.

She sucked her mother's breasts, she indulged in sucking them. Her mother was tired of this. There is no milk anymore, the breasts had dried up.

*Ruri kama uliyopanai. Ruri ki kama nakap. Wor bi sũ wapenoi. Epe aino sepuei. Ruri roipiro wokoi, rowonakeip. Ruri riyo puloro, rumkari riyo puloro. Wonip yipyo paeau. Ko so sukupuro, yala ko koniyam." Wapoyo nui*

Mother and father were tired of this and went to another place. They were staying at another place. They abandoned the child, and the child was staying alone. They left a dog, meat, and fire for her. The parents walked away. They took their other child, the boy, with them. They were staying together with him. The child arrived at the former house and called out for the parents. She said: "Nothing. My mother is gone, my father is gone, my brother is gone. They have left for good." Then she opened the door. There was meat hanging high up, a pig's head and back limbs. There were some embers and a dog, the dog was sitting on the ashes. Those were the things they had left for her. Then, having prepared and eaten some food, she called out by blowing a conch shell.

A man replied with a shell, the ancestor Weiafi replied to her. His name is Siyu. Wapues called out. She was calling for her mother and father. She kept on calling. As for Siyu, he answered the calls of Wapues with a horn shell. Then he arrived at the house. Wapues said: "Ah, you, I was calling you? But I was calling for mother and father. How did you come here? I wasn't calling you. Go away! I was calling mother and father." She realised that he was a fat, huge man with black skin. He was sitting on the porch. She was looking at him through a hole in the wall. She locked the door. Then she cooked food. After

boiling water on the fire, she stirred in sago and cooked meat with *tulip*-vegetables and spinach. She gave it to him through a hole, to a putative bush spirit. He ate it, and the food did not fall out of his arse. She spoke to herself: "Oh, he's human. All right, I thought he was a bush spirit and could therefore devour me." He slept on the porch, all through the night, until the early morning hours. She said to him: "Make room, you can't sit in front of the door, move aside! I'm going to the garden and the sago swamp myself." She opened the door and wanted to leave. The prospective husband Siyu said to her: "Where do you get buckets of water?" She replied: "Drinking water is upstream." "And where is the bathing place?" "Bathing is downstream. I bathe over there."

Then Wapues went to the garden. Siyu prepared the pig's head; he cleaned it and put it in a dish. He boiled water on the fire, stirred in sago and put it next to the other food. He cut the sago into portions. He thought: "I don't know how to cook the meat." He went to the river and emptied his skin of salt. He put the salt into the river. After putting the salt in the river, he tasted the water: "It tastes good. Now I cook the food with it." He also dugged for different water, for drinking water. He took some salt. When the pot with water was boiling on the fire, he put the meat in together with *tulip*-

vegetables and spinach. After cooking, he tasted it, and it tasted good. He took the food out and shared it with his wife. He lost his skin, all gone. He became young again. The man changed his skin so much. Then he put the food on a board. After he had eaten, he remained seated. He was sitting high up on a plank and waiting for Wapues.

She arrived at the house: “Have you gone?” He didn’t answer her; not a word came to her. He sat there in silence. She opened the door, and he embraced her: “Eh, you have changed, you’re a different person!” He said: “I am not a different person. It is me. I came yesterday, I am the same person.” She replied: “You’re really good. We take each other. Let’s live together.” Then they lived together. They have got five children. She gave birth to two girls and three boys. She gave birth to five children.

That’s the end, the story is finished.

## A.6 The spellbound lake

### Introduction

The story *The spellbound lake* was first told in Tok Pisin by Sei Walup in Awol village in September 2000. It was recorded there by my husband Godehard Link. The story was then retold by Margaret Osi in Ossima in August 2004.

### Summary & background

The story is about how a clan got punished for neglecting two orphaned children. The orphaned children left their village, went into the bush and met their “grandmother” who dwells like a bush spirit at the bottom of a pond. The grandmother supported the children and she causes heavy rainfall through magic (Sequence 15). The first effect of the rain was frogs and fish appearing in abundance, which the people collected. The second effect was a flood in which people drowned (Sequence 22). The remaining people were killed by a man named Buoko, whose identity is unclear. Two entire clans were wiped out (Sequence 23). A second man named Amou, whose pregnant wife died in the flood, takes revenge and kills Buoko. (Sequences 29/30). Amou was the last surviving member of the Inuges clan.

Originally the story was told by Sei Walup (see Section 3.6). For better understanding, I suggested that he should first narrate it in Tok Pisin and then repeat the story in Kilmeri. Unfortunately, the Kilmeri version is only an abridged version of the detailed Tok Pisin version and is barely comprehensible. In addition, the second version features so much code-switching, that one cannot speak of a Kilmeri text. In retrospect, it would have been better to arrange a second visit to him, focussing solely on Kilmeri.

There are some narrative differences between Sei’s Tok Pisin version and Margaret’s Kilmeri version. Firstly, Sei starts with an overview embedding the story into the clan context. In particular, he says that the story is not ‘his story’, but he says in Tok Pisin: *na stori bilong mi – i no bilong mi, bilong olgeta man, man bilong mipela wanpela tokples i stap*, which means ‘and my story – it isn’t my story, it belongs to all people, the people of us are one language (community) for ever’. The ownership of the story is extended to the entire community of the fifteen Kilmeri-speaking villages, although it only reports on the fate of a single clan. This is an important indication that the people have a strong sense of shared identity and history. The story relates directly to the village and people of Isi. In fact, Sei mentions three place names: Ia, Isi, and Awol. Sei also confirms that the

disputed body of water had another, older name: Kisi. In his introduction he says: *Mi laik kirapim dispela stori nau. Nem bilong mi Sei Walup. Mi laik wokim mipela Awol stret. Mi wokim wara nau. Na Ppulae, wara Ppulae. Nem bilong em Kisi.* ‘I want to start with the story. My name is Sei Walup. I want to tell a story about us people in Awol. I’ll tell about a small lake, about “Bad water” lake. Before it was called lake Kisi.’ Only after the dramatic incident described in the story did the lake become known as *ppulae* ‘bad’.

Furthermore, Sei mentions the spirit woman who lives at the bottom of the original pond. She is called *memi* ‘grandmother’ by the children. This detail is relevant, because in Sei’s version it is the husband Beko, not the spirit woman, who performs the rain magic. Thus, the husband is responsible for the death of the clans. An old Nimboran myth (Kouwenhoven 1956: 31) tells of the female supernatural being *Indjo*, who lives in the mountain rivers in the south of the Nimboran territory and whose power was feared. Should she become angry, she would send rain and thunder and drown the earth. Given the presumed homeland of the Kilmeri people, there may be a narrative link between the Nimboran oral tradition and this Kilmeri story: Apparently the villagers broke a social rule by neglecting orphaned children, and this was penalised by the spirit woman through her command over the rain and her ability to flood the earth. Margaret Osi preserved the female nature of the creator of the flood, while Sei Walup chose a male one. He also tells us that the two orphans drown in the rising waters. The role of Buoko in Margaret’s version is not entirely clear. He may have killed some survivors of the flood or people from another village nearby.

Finally, concluding the story Sei reinforces his reliability with the Tok Pisin words *Olsem mi no giaman, trupela tok mi tok, **bo makina kopi muli**, tokples nau ... em tasol, sapos **app** i nogat lus em tasol, dispela stori em tasol* (Kilmeri phrases are in bold font), which translates as: ‘Thus I don’t lie, I said the truth, I am speaking my words good, in (my) vernacular now ... that’s it, if the sky is not lost, that’s it, this story now ends’. This is much more than the usual formulae used at the end of stories. He emphasises the dramatic and perhaps even traumatic events.

The location of the small mountain or hill called Asaul in Sequence (29) is unclear. However, the location of *Pu ppulae*, the ‘bad water’, is known. It is a lake about 1 km long and 100-120 m wide west of the Puwani River and south-east of the settlements of Awol. Its natural origin and geological composition are unclear. While the course of the Puwani has changed to some extent over the decades – people are aware of this – the lake is unlikely to be an ancient branch of the river. The Google Earth view shows a blue coloured body of water, while the rivers and old river branches in the area are brownish in colour because of the sediments

they carry. The lake can therefore be said to be a stagnant body of water with no obvious inflow or outflow. It is difficult to access as it is completely surrounded by reeds, and a swamp area extends about 300 metres to the east. The quality of the water is said to be poor, probably a little salty or alkaline, and it is compared to the salty sea, *olsem solwara* in Tok Pisin.

*Pu ppulae* is a taboo place. The inhabitants of Awol and Iulep, to whose land it belongs, do not catch fish in the lake and do not go there to bathe. People are allowed to visit the place, but may not touch it. The collective memory of the place where an ancestral clan perished is still vivid, and it is believed that it is inhabited by the spirits of the dead. White people are not normally allowed to enter the lake, but my family were escorted to the lake by the storyteller Sei Walup and two other men from the village.

People are still familiar with the ginger magic that can be used to bring about rain. On one occasion, Margaret Osi told me about a man from Isi camp who knows rain magic and who performed the ritual in very hot and dry weather.

Ripi and Ripaek are brother and sister. Their parents are dead, and the two of them live alone, as orphans. The villagers didn't give them any food. So they lived like this: they searched for food themselves. They walked around and ate what they found. The people used to rub faeces on their heads, and they used to rub spoiled sago on their heads, foul sago, burned sago. The two children thought: "We go and search for food, because the people didn't give us any."

They caught sight of water. They found a pond with brackish water. The water has dried up. "Eh, here is still some water!" Pieces of wood were poking out of the water. "We'll scoop the remaining water with a shovel." They scooped it, the pond was dry, and they caught the fish with their hands, *waeripi*-fish, *wamo*-fish, *waeup*-fish. The *waeup*-fish vanished. They uncovered the wood (at the bottom of the pond). They heard a voice: "Eh, what is this, who are you two?" The children replied: "We two? We two are your grandchildren." The woman said: "This is not uncovered wood, this is my house. Come, come here you two!" She was looking with surprise on them: "What is this, what did you two do?" The children replied: "The villagers rubbed us with faeces, with spoiled sago, with burned sago. Our bodies are bad, we are not living well." She bathed them. She washed

the faeces and the sago off their bodies with water and cut their hair. Now their bodies are good and strong. She cooked rice for them and distributed it on plates. Then she gave it to them. When they had eaten, she gave them raw rice. She put it in a basket and said to them: "Go! I will perform rain magic now."

Then she ground and scattered ginger. Soon the rain was dripping down steadily. It rained heavily until darkness. *Pepuol*-frogs and *peia*-frogs jumped down to water pools, in daylight at dawn. In the morning the children went and saw all the water. Frogs have jumped down, and they caught them with their hands. They wrapped them into leaves and carried one package to their former house in the village. Ripi and Ripaek said to the people: "Go down there, there are frogs in great numbers, there are more there." So the people went, all of them, mothers and fathers together with their children, and they caught the frogs.<sup>30</sup> The water reached their ankles, then their shins, later their thighs and waists. The *waeripi*-fish came. Here they come, catch them! Then the *waeripi*-fish vanished. The fish swam there, to the other side; then the *waeripi*-fish came here again, they moved about here and over there. The water reached up to the armpit, to the neck, and people started drowning in the water.

<sup>30</sup>Frogs were and still are valuable food and people like to eat them.

Buoko brought an axe and killed all the people. The people's bodies were lying everywhere: the Inuges from the mountain Ir and the Inuges from the plain Ir. He marked their bodies with black paint. It is over.

Amou asked his father Yara: "My wife is not there? Where did Dupu go?" The father replied: "She has left. Dupu followed the people, who were catching frogs." Amou and his father Yara walked along the path and realised: All the people died. Amou recounted the names of all people. He was standing next to his dead wife. The woman had been pregnant; in her ear was an *isau*-feather. Buoko cut Amou's big toe. Now Amou has a gash. The cut left a scar; alright, he will be marked.<sup>31</sup> Amou fled to the other side of the mountain and lay in wait for Buoko. He lay in wait for him on the other side; he waited for him at Mount Asaul. He cut *limbum*-ribs and fenced a pig trap. He put the *limbum*-ribs side by side. Then he drilled a spying hole and was looking through: "Here comes Buoko." Amou shot him dead. Amou ran and ran. He lost his tongue as the tongue was dragging on the ground behind him. He fell over and got up again. He said to the people: "I shot Buoko."

The water is salty like the sea. The lake is very large. The name of the

## A.7 Muruk

### Introduction

The story *Muruk* 'The cassowary' was told by Susan Bisam in Ossima in December 1999. The language she chose was Tok Pisin.

### Summary & background

According to Susan Bisam, the story originates from the Sepik region. She probably refers to some of the larger tributaries of the Sepik that originate in the Bewani Mountains and the Border Mountains. However, she also mentions the village of Omula, the neighbouring village of Omoi further downstream of the Puwani in the Kilmeri region. Today, the villages of Omoi and Omula are located on the left bank of the Puwani. A few decades ago, however, Omula appears to have been on the right bank of the Puwani, as shown on the official map of Australia/Papua New Guinea, sheet 7192. The area to the south-east of ancient Omula borders the Eastern Pagi language area and people. Presumably the inhabitants of Omula and a group of East Pagi were once hostile to each other. Much of the area between the old village of Omula and the East Pagi village of Imbrinis is covered by swamps in which sago palms are cultivated.

In the story of *Muruk*, the inhabitants of an entire village met a gruesome death. They had set a fire on kunai grass (*Imperata cylindrica*) to hunt for the fleeing animals, pigs and cassowaries. However, this is the opportunity for the cassowary man to avenge the death of his cassowary mother by killing them all. It is possible that the cassowary man is based on a ritual cassowary dancer, who is the first-ranking character in a fertility ritual called *Ida*, which is performed by a number of peoples of the Border language family (Gell 1975: 168-169). This ritual was performed annually by the Waina/Umeda, the Punda, and the Waris, who live south of the Bewani Mountains. The ritual was performed up until (at least) the 1970s and 1980s and is described in detail by Gell (1975). Its purpose was to ensure the availability of sago (1975: 15-16). The Waris dictionary of Brown & Wai (1986) contains about a dozen words and expressions that refer to this fertility ritual. Susan herself used the word *yîs* to describe a day-long break in sago work. In the *Ida* ritual, this word refers to hot sago jelly, which the dancers throw in the air in the early morning hours after the cassowary dance has ended. The women have to leave the scene and have to sit idle in their houses (Gell 1975: 185; cf. Text F.4, Sequence 24). No other consultant used the collocation *yîs* *nake* 'sit idle'.

The young cassowary's search for his mother<sup>35</sup>, which is where the story begins, may indicate an important spiritual difference between the eastern Pagi villages and the Omula villages. The Omula, and all Kilmeri, do not engage in the fertility ritual centred around sago and the cassowary dancer, a cultural heritage of the southern groups of the Border people. From the perspective of the Eastern Pagi, the Omula are not authorised to hunt cassowaries without fulfilling the appropriate ritual requirements. Therefore, a young cassowary searching for its mother may convey the message that cassowaries are viciously killed by the people of Omula. Such a sacrilege was to be prevented which is why the cassowary man took action.

Margaret Osi never mentioned a fertility ritual similar to the *Ida* ritual described and analysed by Gell (1975). According to her, the spiritual source of the Kilmeri was the men's house that belonged to every Kilmeri village (Cf. Text B.4). I myself know of three men's houses that were in use until the 1970s (or even longer). In contrast, Gell explicitly denies the existence of men's houses in the village of Umeda (1975: 10-11). This difference in spiritual tradition is not the only difference between the Kilmeri and the Pagi. Linguistically, the Pagi language has more grammatical features in common with Waris and Imonda than with Kilmeri. In Gerstner-Link (2023), I hypothesise that the Pagi have migrated into the Puwani Basin from the south by crossing the Bewani Mountains. This hypothesis is backed up by the fact that the Waris people are described by Gell as fierce and are said to have repeatedly driven neighbouring peoples/clans out of their settlements (1975: 5; 22). The same could have happened to the Pagi, who then crossed the mountains to the north in search of a better habitat. Later on however, with the arrival of the Kilmeri clans, they became victims of displacement again.<sup>36</sup>

Note that the title *Muruk* in the story only refers to a cassowary. The animal is not called a *masalai* 'evil bush spirit'. Therefore, this title is in contrast to the other titles Susan has chosen for her stories which include the word *masalai*. However, the cassowary man is said to have practised cannibalism and is described as truly savage: *Em i wel, wel olgeta*. His wild behaviour corresponds to

<sup>35</sup>Cassowary eggs are hatched by the male and the chicks remain in the nest for around nine months under the protection of their father. The female bird is polygamous. The search for the "mother" is therefore an over-generalisation of the widespread breeding and caring behaviour of some bush animals. The lowland area north of the Bewani Mountains is the habitat of the Northern Cassowary (*Casuarius unappendiculatus*).

<sup>36</sup>A look on the language map in Figure 5.1 shows that the Pagi language territory is split into an Eastern part and a Western part, which is probably due to the intrusion of the Kilmeri from the west via the Bewani valley. The Kilmeri have ties to the Manem language area and some clans in the west (Jeffrey Osi, p.c.).

the behaviour of cassowaries in the wild, which are shy, solitary and aggressive. These birds grow up to 1.70 metres tall, equivalent to a human; and they can jump as high as 1.5 metres. This makes its appearance threatening.

A cassowary was looking for its mother and searched for her. She had gone to the sago swamp and was killed there. They had killed her. The young cassowary looked and searched and searched all over. Nothing. It didn't find its mother. She must have gone towards Omula. Eventually it found her head. Its mother's head. It saw her head right there. So the cassowary talked to the people of Omula.

*Em i kam tokim papamama bilong ol ples. Ol i lukautim em. Em i tokim ol: "Yupela wokim praim bilong mi. Bai mi go long bus." Mama bilong long ples em wokim praim bilong en. Em i silip, moning em i go pinis. Em i go kamap olsem dispela Omula.*

*Go long papamama bilong en soim. "Papamama emya, pikya, yupela kai-kai sampela." Papamama bilong en, ol*

Then it turned back to its own village and talked to the men and women there. They took care of it. Later it said to them: "You make sago pancakes for me. I will go to the bush." The mothers of the village made sago pancakes for the cassowary. It slept, and in the morning it left. It walked on and came to that place called Omula.

The cassowary said to the people there: "You all, women, men, let's burn the kunai grass together." They listened to the cassowary, they heard what it said. The women, the men, the children, the elderly people, all of them listened. Bad, too bad for them. They all went to burn the kunai grass and followed the cassowary. How foolish! That man had the appearance of a cassowary. Now he changed into a human.

The man stood up in his cassowary mask. He killed them, all of them. He was occupied with killing. He killed the women, the men, the children, the elderly. A truly bad chief. It is over, over, over, over. They all died. The cassowary man stood up and broke their bodies in two, broke in two the bodies of all the people. He broke and broke and broke. Eight baskets full of the innards of all those people. He smoked the meat only a little bit. He couldn't wait to take it to his village.

He returned to his village to show the meat to his people. "All of you, look here, pig meat, pig meat, you eat!" His

family, they lit a fire. Then they look at the meat. Oh no: the innards of humans. Heart, liver, kidneys of human beings. They didn't eat anything of this flesh. They put the human flesh on sago palm leafstalks. All helped together and they put it there. The cassowary-man alone eats. He alone eats and eats. Then it's over. He has finished his human meal.

The cassowary man ran away. He is sly and tricky, a cunning fellow.

That's my little talk in this morning.

## A.8 *Ome na Lapi*

### Introduction

The story *Ome na Lapi* was told by Margaret Osi in Ossima village in April 2002. The story features a jealous husband who causes the killing of many people.

### Summary & background

The story goes back to the knowledge of John Sol from Isi Camp, a hamlet about 1 km from Ossima. There is a wide expanse of metre-high *kunai* grass (*Imperata cylindrica*) between the houses of Isi Camp and the Puwani River, which you have to cross to reach the sandy riverbank. The inhabitants of Isi Camp are from the village of Isi, 3-4 km south of Kiliwes. As they belong to the larger Imo clan, they were permitted to settle in the area of Ossima, which is also a settlement of the Imo clan. The large fissure in the earth near Kiliwes is called Yi.

The Sequences 13-15 are a free association that follow the actual story line. The “exchange” of weapons implies a sense of great loss after the arrival of the whites, who seemed to be so much stronger.

### Parallel text

*Ome duyoy lo. Duyoy klapno bike lu. Bike wepulo yipyoy, epe kep sano, “Ako kopi ari?” “Ako depi kero būri depi woko.” Yena sūkui pi. Yena pupno woni, yena garamut rino kowe. Yelo niyerip. Ome ki dob sana, “Eh ako kopi ke roki ono baya.” Sūkui roki ipoi. “Ko pe pakoyo ulei, ko pulapi.” Biliyo nekipno ki pulapiro.*

Ome went to the bush and shot a cassowary. He brought the cassowary home and asked his mother: “Isn’t my wife here?” She replied: “Your wife, she accompanied your sister.” The people danced. They blew the conches and they beat the garamut. The ground was shaking. Men and women swayed, at the place Yi; they danced close together. He took a bow and arrows. While the people danced, he looked at his wife. Ome looked there, “Eh, my wife is dancing with another man.” They swayed in the dance. “I will put an arrow on the bow and draw the bow,” says Ome to himself. As he stands at the entrance, he draws the bow.

*Yena kiniyo supuli, yelo bî kana powolo.  
Yena riyo kûno, yena kiniyo riyo kûpo.  
Yena riyo kûkûnapno bili sowe. Yelo mi  
bî dori, paupiyo, dori solo.*

All the people died because a crack suddenly opened in the ground. People fell in there, all the people fell in there. All the people fell, and the opening of the ground closed. The ground turned back to close the cave. It closed it completely, it just turned back.

*Pako ukepi yena dop sei wel. Pako dop  
seipi uke dop wisi piyo. Bawelko, ba-  
sepoloko. Aska.*

The people with white skin colour carried our bows away. We black-skinned people took the bows of the white-skinned people. Ours have been carried away, they are lost. Nothing is left.

*Bo kuru.*

That's the end of the story.

## A.9 Bue

### Introduction

The story *Bue* ‘The salt’ was told by Brigitte Esau from Omoi on July 2000. It describes the discovery of salt by the ancestor Wumeye. For some time, Brigitte joined my consultant team and came to my house in Ossima.

### Summary & background

Brigitte Esau mapped out the route through the bush by naming several places that the ancestor Wumeye visited (Figure A.6). He set off from the Pual River near Omoi. First he reached the Apilaua hillside and the Pusemo stream. Next he reached the second hill and the hamlet of Wupepp, where he spent the night. This place is mentioned in the story. Then he crossed the Puwalei stream and passed Walili, the last village (or even the last settlement?) before reaching the coast. Now he arrived at the coast at Okuli, where he made camp. People would later boil salt water at this place to extract salt.

Unfortunately, the names mentioned by Brigitte Esau could not be identified on official maps (Australia. Army. Royal Australian Survey Corps 1969: Sheet 7192). The places were “in use” a century ago or even longer. Today they are only recognisable to people who are familiar with all the details of the oral history.

The text confirms the argument that the Kilmeri are an inland people who first had to “discover” the coast and the sea.

### Parallel text

ing and thought: "Well, this is the taste of salt." Now he returned to the village. There he informed the people: "The sea, I saw it there. I reached the sea, I have seen the sea." Then he talked to the people, and afterwards they cut a bush track to reach the sea. They were tasting the salty water, yes. Then they cut bamboo containers, filled them with salt water and carried them to the village. The salt's name is Wumeye salt.

Kuru bo kopi.

My story is finished.

Bush track from Omoi to the sea

## B Traditional stories

### B.1 Bermepu

#### Introduction

The story *Bermepu* ‘(The fight over) sago grubs’ was told by Margaret Osi in the village of Ossima. The story was recorded in January 2000 and again in September 2004.

#### Summary & background

There are two versions of this story. The first version was told in January 2000, at the beginning of my fieldwork. It was the first story Margaret Osi told at my suggestion. She seemed a little unsure about telling traditional stories and disputed that she was a good storyteller. During their marriage, her husband Lis Osi used to tell these stories while she listened. But Margaret agreed to tell the story with the following Tok Pisin words: *Mi save dispela stori long binatang*, which is ‘Yes, I do remember a story about sago grubs’. The next day, I set up the recording environment and she told the story.

The second version of the story was told in August 2004. Why a second version? I had the impression that there were some unclear passages that needed to be clarified. Then Margaret said she would retell the whole story, with the intention of producing it in a more coherent way and in better Kilmeri. She had no doubt that the new version was better, because both her own ability to narrate and my ability to understand Kilmeri had improved over the years of language work.

There are some differences between the two versions:

- Version 1 starts with several address formulae. In particular, I am explicitly addressed, which never happened again this way on later occasions. (See below, Kilmeri Glossed Text.) The second version does without introductory formulae.
- In Version 2 the fight between the bush spirit and the man is more elaborately told and mentions four kinds of “weapons” (Sequences 9 and 10).

## B Traditional stories

- Version 2 explicitly mentions that the bush spirit has eaten up the two people including their brains (Sequence 21), while Version 1 speaks only about cooking them.
- In Version 1 the bush spirit has small children (Sequence 24).

Among the Kilmeri it is still customary to mark the claim of a family or a clan to certain bush goods by erecting a taboo sign. But often a dispute arises between two parties because they have not respected such a taboo. So the conflict between Kopukei, the human, and Sukupu, the bush spirit, is a normal social and economic conflict. The story partly shifts into the realm of an evil spirit with the expected bad ending for the human party.

For an outsider, taboo signs are difficult to recognise, as the plant parts with which they are erected are almost unrecognisable to someone who is not familiar with this custom. In their descriptions, people used the Tok Pisin word *tanget* (*Cordyline fruticosa*), a species endemic to New Guinea. This is a shrub with long green leaves (30-60 cm long, 5-10 cm wide) at the top of a woody stem that produces 40-60 cm long panicles of small fragrant yellowish, light purple, or red flowers that ripen into red berries. The wilted panicles can be slung around something as a taboo sign, cf. Kilmeri *aipo nopuane*, which contains the stem *nopi* 'to tie with a rope', and can also be used for tying beams together by means of a *liana*-rope.

The death of a bush spirit whose house caught fire is confirmed by a bang, which comes from the bush spirit's gall bladder bursting.

The object of dispute are sago grubs, viz., the larva of *Rhynchophorus ferrugineus* ssp. *papuanus*, also called *Rhynchophorus bilineatus*, a very nutritious part of the people's diet. The following basic remarks about the grubs and their use go back to Chan (2014: 32-37).

In Papua New Guinea, the larva of *R. bilineatus* is the most commonly eaten insect, as it is a by-product of sago starch production there. The sago weevil larvae are eaten alive, boiled, roasted or mixed into sago pancakes. Typically, weevils are produced from the sago stump and cabbage remaining after the harvest and processing of the sago palm, *Metroxylon sagu*. In some areas, the spiny-trunk sago palm, *Metroxylon rumphii*, which is not eaten because of inferior-quality starch, is cut and prepared for weevil production, each palm producing 500-600 grubs. The production and harvesting of sago grubs is still an important nutrient of the Kilmeri who live in forest settlements away from the coast and the town of Vanimo.

Figure B.1: A string of sago grubs on the market in Ossima Asples

### Parallel text (second version)

*Sukupu masalai, Kopukei ono. Kopukei aipo nopuanako, sukupu aipo nopuanako. Kopukei pulo, bermepu mo. Komoipno yeloyo layo. Bermepu we yeloyo. Kopukei bermepu puraporo. Kopukei ruri bepu parno lolo, rileyo weppuo. Ri wuliyo sakana sowo, dob pop.*

Sukupu is a bush spirit, and Kopukei is a human. Kopukei had placed a taboo sign, and the bush spirit had also placed a taboo sign. Kopukei came and cut sago grubs. After cutting them he put them on the ground; several sago grubs fell onto the ground. Kopukei broke the sago grubs, took them and put them in a basket. After a while the bush spirit came; it had heard the noise of breaking wood. The bush spirit saw what happened and said: "All right, you have cut the sago grubs, we will break them together." Soon they had broken all the grubs and come to an end. Kopukei's son wrapped up the grubs in palm leaves, carried them up a tree, hid himself secretly in the top of the tree and

*Sukupu Kopukei muelno: "Nuko bepu epono imali." Epono kimalko, mi bîsepno imali. Bîsepno kimalko, mi sûno imali. Sûno kimalko, mi rino imali. Rino kimalko, sukupu mi Kopukei lelio. Paliya. *Yipyo kemelipno, ruri yeloyo kûno. Boyo ekuyo yek. Ruri kep aipo pewo. Yilauyo lo. Kiu kep muelien: "Epe aino sukupu no. Leliowe." Yena ruri Kopukeipi wulino. Monomno wulino. Ruri musiyoyo: "De lap, sanap!"*

*"Sukupu epe aino ulakip! Epe aino kopi, ari?" "Oh, ko ar reyowe." "Ari. De yipyoro wepulowe. De dupuapi." Yipyo lili. Ipiyo siwe. Puaku dupua solo ipiyo lilip. Dû kiniyo banok. Puaku dupua epe ainopi sipeiwe. Lûli neppino sipeiwe,*

was watching what happened on the ground.

The bush spirit said to Kopukei: "We will fight with faeces over the sago grubs." Having fought with faeces, they fought with saliva; having fought with saliva, they fought with fire; having fought with fire, they finally fought with sticks. While fighting with sticks, the bush spirit killed Kopukei. He is dead. The spirit also killed Kopukei's wife. It beat her fiercely and fervently with a stick, then she is dead. The evil spirit killed both, husband and wife. First it cut up the father's flesh, then it cut up the mother's flesh. The bush spirit put the flesh of father and mother in a netbag. It filled the netbag up and carried it to his house.

After the bush spirit had carried all the meat home, the boy came down from the tree. He followed the bush spirit's foot steps. The boy placed a taboo sign, went to the village and told his clan: "A bush spirit ate mother and father, he killed them both." Learning that the people followed Kopukei's child along the bush track. They sent the boy ahead: "Go and ask the spirit about your parents."

"Bush spirit, now release my mother and my father! Release my parents, aren't they here?" "No, no, I didn't see them." The boy countered: "No way, you brought them both to the house. You are lying." Yes, their bod-

*lûli no. Sukupu buar piyo anno. “Am ko kûne. De am nekiwep.” Yena yip pakiyo nekip, biskilyo nekip. Enuka nekip, wolo yo nekip. Peno wapilayo. Dop kepyo polip, sui. Paliya.*

ies are in the house. The bush spirit cooked them in a pot. Now there were only the two heads left in the pot; all the meat has been eaten up. The bush spirit took the brains out of the heads. It took a knife, cut the brains out of the skulls and ate them. Then the bush spirit grasped an axe and said to the people waiting outside his house: “I come down first, you remain staying there.” The people were standing around the house and underneath it; they were standing at the corners and on the ladder. They peppered it with arrows, which stuck in its body. So the bush spirit is dying. It is dead.

They lifted it up and put it into its house. They locked the door and set fires. The fires burned the house to the ground, together with the bush spirit. The gall bladder of the bush spirit burst. Hearing this noise, the people went back to their houses in the village. They went with shouts of victory.

## B.2 Urual bekulu

### Introduction

The story *Urual bekulu* ‘The huge lizard’ was told jointly by Susam Bisam and Margaret Osi in Ossima village in August 2004.

### Summary & background

This story depicts the encounter of a hunter with a huge lizard that is later interpreted as a bush spirit. The hunter who roamed the bush alone is killed by the lizard. The term *urual* is glossed here as ‘lizard’, because this is the translation that the people themselves gave. In order to understand the physical power of the creature it makes sense to search for its biological and scientific identity. The description in the story and further explanations by the story tellers, especially by Susan Bisam, led to the species *Varanus salvadorii* (Ordo: Squamata; without rank: Toxicofera). In English it is called “the Papuan monitor,” which denotes a varanoid saurian endemic to New Guinea. The animal is more than 2.5 m long, and it weighs well over 6 kg. It has extremely sharp and long teeth. Its limbs and claws are very strong and look quite big compared to the body.

All these features were known to Susan Bisam, in particular the strength of its limbs and the dangerous teeth. There is no doubt that when Susan was growing up, the hunters of the time had to be wary of these animals. The habitat of *Varanus salvadorii* is rainforests and swamps between the coast and the interior at altitudes of up to 600 metres. It lives in trees and jumps from branch to branch, using its long tail for balance. It feeds on small mammals, birds and eggs, but also on insects – in swampy areas it may even feed on sago grubs. Humans are therefore not prey for these monitor lizards, but they can fall victim to their aggressiveness when competing with them for prey animals such as possums or tree kangaroos. Some species of the Varanidae family are toxic and have venom glands. It seems possible that *Varanus salvadorii* also has poisonous glands, as its bites are apparently fatal.

What is said above seems to be a reasonable background for the following story. Reference to the protagonist as a “lizard” occurs 10 times (Sequences 9(3x), 10, 11, 31, 32, 35, 38, 39), whereas it is referred to as “bush spirit” 6 times (Sequences 31, 32, 39(4x)). The creature displays almost supernatural powers, as it is able to split the ironwood tree in two, in which the older brother (i.e., the victim) was hiding. This is, of course, a narrative exaggeration. Nevertheless, the base of its tail can be enormously strong.

I may add a comment on Sequence 36, which sounds more like a raid than a revenge, as it lists both traditional and modern items taken from the bush spirit. In the past, clans have indeed raided other settlements out of revenge or simply out of need.

This is a very long story. It tells about two brothers.

The younger brother always withheld food from the older brother. He used to eat the killed animals alone; he didn't give him anything. He usually gave him only the skin. The meat he always ate alone; he didn't give the older brother any of it. He sleeps, he goes hunting into the bush, shoots animals, and brings them home. There he eats them together with his children and his wife, they alone. The older brother only receives the skin of the animals.

The older brother thought: "My children cry," and he said to his younger brother: "Leave me the dogs, I take two dogs with me to the bush." The younger replied: "Take the dogs with you!" He took them with him to the bush. The dogs barked loudly (and startled) the cassowaries. He shot a pig and a cassowary. In order to cool the killed animals, he put them into the river and set a taboo sign; then he carried on hunting. He shot a boar. He put the boar into the river and set a taboo sign; then off he went again. He shot a cassowary; the dogs had barked (and startled) the cassowaries. Having

shot one, he put it into the river and set a taboo sign. Off he went again and took the dogs with him. The dogs barked loudly for kangaroos. The two dogs caught a kangaroo, it is dead. He put it into the river and set a taboo sign. Then he went on for hunting. He shot a sow; the dogs had barked loudly. He put the sow into the river and set a taboo sign.

He went off again. The dogs barked for lizards. There was a big lizard sleeping in the sun. The father listened for noises: He went slowly, he approached more slowly. Then he looked, "Eh, there is a big lizard." The father hid in the buttress of an ironwood tree. He released an arrow. It stuck in the monitor lizard's body, there it was. The lizard turned its body towards him, and the father released one more arrow aiming at the lizard. Then the monitor lizard jumped and got hold of the man. Together with the tree it threw the man over and cut in half man and tree. The lizard's body and tail are like a saw. It aimed its teeth and cut apart man and tree. It cut him in two at his belly, and the man is dead.

Then the bush spirit, who had taken on the appearance of a lizard, carried the dead man to the water. Afterwards it rubbed the head of one of the dogs with blood. For the other dog it cut off some hair and put the father's hair between its teeth. The dog carried it to the family's house in the vil-

lage. The bush spirit rubbed the dog's face with blood, and the dog carried it to the mothers. One brought the father's hair, the other one the father's blood. Meanwhile the bush spirit took the dead man's head and arms and carried them down to the water. It also carried the two legs down to the water. It brought plenty of human flesh to its place; it carried it to its underwater house. Then the spirit put the man's penis cover upright beside the water. It fastened it there on a stick.

The dogs went back to the village where the two mothers were waiting. But the dead man's spirit had already gone ahead to their house. He was standing at the ladder and saw: "Ah, so many leeches on my feet, an abundance of leeches." He climbed the ladder of the house and stood at the door. The two wives opened the door: "No, nothing, there's nobody. But what is this? This is his spirit." Their hearts flooded like water. They thought about what could have happened. The dogs hadn't come yet. Finally the dogs arrived at the house. The mothers were listening to their noise; then they opened the door. They put fire on a chip of wood, it burns, the flame burned. The mothers gazed at the dogs' mouths: One dog has blood rubbed on, the other dog brought hair. The two mothers caught sight of the dogs' mouths, their faces, their teeth: The hair between the teeth of one dog, the blood on the face

*Riyopuno ya piyo, uroyo ule, ewe lipelip. Lo. Pu riyepulo, pu epi mono lo. Dob po: Bike ulili. Milo: Biep ulili. Milo: Bike ba ulili. Milo: Bisem ulili. Milo: Biwi el roise ulili. of the other dog. The mothers wept. The younger brother came down to the house: "What's the matter?" "You alone used to eat the animal's meat. You never gave meat to him, we used to eat only the skin." Having heard that, the younger brother wept. He wept for his older brother.

Then he took sago and put it into a netbag. He wanted to search for his brother and left. Reaching the river he walked along the track on the riverbank. He looked closely: "Here is a cassowary." He went on, "Here is a boar." He walked further, "Here is another cassowary." So he also discovered the kangaroo and the pregnant sow. He looked around: "This tree, what happened here? What cut it apart?" Then he realised: Blood is spread around everywhere. A bush spirit must have got hold of my older brother. It must have carried the corpse down to the water. The younger brother burst into tears. Suddenly he saw something else: The bush spirit fastened the penis cover on a stick. Here it is! So he left for the village; he went crying. The two wives heard the news: Our husband is dead. The younger brother was walking back shedding tears. He arrived at the house and told them: "A big lizard ate him. A bush spirit ate him. It carried him down to the river. Let's go for revenge." He took the clan with him. They went to the bush spirit's place and arrived there.

The two wives wept as did all the other people. The bush spirit heard it: "People are weeping." Then it opened the door. The people heard the noise: "Here it comes." The door is open. "You all stand in line beside the water, it will come up now." The bush spirit opened a second door; the door is wide open. "Here it comes! You all take bows and arrows." He opened the third door, and suddenly the lizard stood on the riverbank, at the edge of the water. The people peppered it with arrows. The huge lizard is dead. The people went down to the water, they are passing the water and reach its house. They grabbed its belongings and took them away: the bush knife, the small knife, the axe, the pots, the dishes with scoops, the spade, rice and fish, the oil, the petrol. They caught the wild ducks and also the wild fowls. They took the lamp, the wicks, the blankets, skirts and towels, soap and detergent, everything. The people carried lots of things, all his belongings. Many of them they gave to the two wives. They carried one half, the other half they gave to the two wives. Now the people cut a lot of wood. They lit a fire; they lit the fire with firewood. It burned and they put the lizard in the fire. The fire blazes.

Carrying the belongings of the bush spirit, the people went back to the village. They had put the bush spirit's corpse on fire, together a few things of it. They went to the village loaded

*Bo kuru.*

*Sukupu ba ppili. Sukupu ba akoyo rurino. Sukupu luo bîyo mape, bîyo mapepulupi. Liki sukupupi poli, luo bîyo poli. Sukupu dop sei sowemayo. Ari, leliewepi aska. Yala uke upuna mape. Sukupu basepoloko, basepolowe-puko.*

with all the things of the lizard, which turned out to be a bush spirit. Later the gall bladder burst. The people heard the bang from a distance and soon arrived in their village.

The story is finished.

Some bush spirits live single, other bush spirits have wives and children. The bush spirits live in stone caves. They come to stay in many caves. The places of the bush spirits are there, they are hidden in the stone caves. The bush spirits hid from the white people. No, there is no killing anymore. Now we live good. The bush spirits have disappeared; they have vanished entirely.

## B.3 Walpop bo

### Introduction

The story *Walpop bo* 'A small turtle' was told jointly by Susan Bisam and Margaret Osi in Ossima village in September 2004.

### Summary & background

The Kilmeri title of the story, *Walpop bo*, was chosen by Margaret Osi herself. It translates as 'story of a small turtle'. The story revolves around a small turtle whose tracks two sisters saw on the riverbank while catching fish. The word *walpop* refers to a small kind of turtle. Such an animal does not have much meat, and therefore provides only a small addition to a meal. Nevertheless, one of the sisters wants to get it, even though they have already filled two baskets with fish. Climbing the often steep bank of a river can be dangerous as one might lose one's hold. The story could therefore be read as a warning not to do anything rash that is not worthwhile.

Further on, the story features a man who helps the unfortunate sister and takes her back to her village and her family. The generous behaviour of a stranger is culturally surprising. Normally, a stranger would seduce a lonely woman whom he meets by chance in the forest. Here, the contrary is happening.

Two sisters took one husband. The older sister got pregnant, but the younger sister was not pregnant and was living like single. Their husband withheld the food; he used to eat alone. Only he would eat meat, fish, and sago. The two wives reflected: "Let's go, we look for the river. Did it dry up?" They went there and saw that the river has dried up. Having staked off a small basin downriver, they scooped it empty with a *pan-gal*-shovel. No water was left. Only the bottom of the river was visible, and there were fish, namely shrimps,

*saul dupua puyo unepana, wise yipyo lo. Uki muelno: "De bi kama noulipop, dari kopi sepolo. Walpop bi luppue, yala sukupu noniri. Ko kleouro. De eli kama noulipop, bi de koyo ar ponienpop." Uki womopip. "De ke wo komopem! De kama noulpop! Sukei roki waponu."*

*wamo-fish, weripi-fish, waesopp-fish, and weiop-fish. The sisters saw meat for food. They put aside two pangal-baskets full of fish. Then they noticed a hole. They saw the footprints of a small turtle, right here the traces go straight up. Then the younger sister said to the older: "You stay here, because you are pregnant. I will go up." The older sister replied: "No, I will go up myself." So the older sister came to the house of the bush spirit. Her younger sister waited in vain and wept until evening. She tipped the pangal-containers with the fish across the river and went home crying. She said to her husband: "You always ate the meat alone. My sister disappeared. She went up to the cave of a small turtle. Now the bush spirit will eat her. I waited for her in vain. You yourself ate everything alone, you didn't give us any meat." The husband started weeping, but his wife said to him: "Don't even cry, you alone ate. Your bad habit caused her trouble."*

The older sister went to the bush spirit's house and reached it. "Where did you come from?" she was asked. She replied, "I expected a small turtle there." "A small turtle? No, it's me. Come, you will live on the other side of the house." The wife gave birth to a boy in the bush spirit's house. The bush spirit saw her. There were two ladders. One belonged to the bush spirit's room, the other one belonged to the woman's room. The placenta

fell down, the bush spirit cut the umbilical cord and ate it readily. Then it fell out of its anus and dropped on the ground. The wife realised: "Oh, this one is a bush spirit! I expected it to be human, but this one is a bush spirit. It will devour me soon." She lived on with a sad heart: "What am I going to do now?" While she was living like this, the bush spirit went to the bush. It shot humans and shot animals and brought them to the house. It gave the animals' meat to the woman. But what about the human flesh, did it eat it? The bush spirit surely hid when eating human flesh. It lived on like this. Meanwhile the child crawls, the child stands up, walks on his feet, has become big. One day the bush spirit decided: "I go collect *aibika*-leaves." It went to the garden, which was far away. Having left, it collected *aibika*-leaves.

At once a man named Bipep came to the bush spirits house and said to the woman: "Come, let's go away from here, the bush spirit will eat you up soon. You together with your child, let's go now, come on! I won't eat you, I will help you." The older sister and her child followed Bipep and they were living in Bipep's house. "Here is your place", and he showed it to her. Then Bipep said to White Ant, a friendly spirit: "You should deceive the bush spirit." "Yes, I will do that." White Ant remained in the bush spirit's cave, and Bipep closed

woko Bipep yipyo." Sukupu Bipep sano: "Deyo inake?" "Oh koyo pari!" "De dupuapi deyoru." "Oh koyo pari!" "De ko wapiye, ko bareyeko, ere nake." Sukupu yipyo ppuo, wor dupua puesu. Yeloyo seku, puana: ko due nup. Bipep muelno: "Ko le yipyo, ko yip ikapyo le." Dorilo, balok.

the door behind Muem as White Ant is called: "We are leaving. You will stay here to wait for the spirit." "Yes, you two go now." The bush spirit came back and brought the *aibika*-leaves home: "Are you there?" "Yes, I am here," replied Muem, the White Ant. The bush spirit went into its room, took the stone axe and brought it, "Now I will break White Ant into pieces, it deceived me. Oh, the woman! Oh no, she has gone." The bush spirit followed their traces: "Oh, here he went together with her. They went to Bipep's house." Arriving there he asked Bipep: "Are you in?" "No, we are not." "You are lying, it's the two of you." Bipep insisted: "No, it's not us." The bush spirit countered, "You deceive me. I have seen her, she is here." The bush spirit went up the ladder to Bipep's house. Two dogs bit it. It fell on the ground, but stood up again. "I was sleeping," the spirit thought. Then it said to Bipep: "I'll leave, I go back to my house." It turned back and went.

Bipep said to the wife: "We will go to your village." They went with baskets full of meat and sago grubs. He wrapped tobacco in a bark mat. Together with the woman Bipep walked to her village. He put their belongings at the foot of a banana tree. There they stood together with her child and looked around. Her husband was working in the garden. His wife threw *puap*-fruits after him. The husband

*anno wiyo, mosiyo, womop: "Ko so de kusuikori!" "Ko unake, ko ar sui. Ko Bipep mekiyo." Kiu muelien: "Inawe, ine yip kopiyo pulupip! Bo kopi malap! Bipep kikilimpoyam kuwiyoyam, ko mekiyo!" "De uke bamuelienko, epul uke bamalok, boyo uke ar wiye."*

Piyapoppuo, yip biyo panapo. Riyopuno yip sûno noriyo. Yena le roise yilauyo molo. Ûli boyo pulwolo. Yena epul malwolo: Ar nake, ûli kep bapulwoloko.*

*Bo kuru.*

looked up, "Who was throwing the *puap*-fruits?" He turned to the foot of the banana tree, "Oh, my wife!" He hugged her and the child: "I believed you died not long ago!" She replied: "I did not die, I am alive. Bipep helped me." They fetched the things and went to the house. She put her belongings inside. The younger sister came, hugged her, rejoiced, and sighed: "I believed you died." "I am alive, I didn't die. Bipep helped me." She said to the family: "Come, come to my house and hear my words! Do not kill Bipep, do not hold him! He saved me!" They replied: "You have spoken to us, we got it. We won't hold him and won't punish him."

The people walked along the bush track. They went to the house of the bush spirit and arrived there. They called up to it: "Are you in?" "Who are you?" The spirit opened the door and came down to the ground. The people were standing in a line and peppered it with arrows. All the arrows stuck in its body. It is dead. They lifted it up and put it inside the house. Then they set the house on fire. Afterwards all the people went back to the village and took the bush spirit's things with them. Later its gall bladder burst. The people heard it bang. All right, the spirit doesn't live anymore; its gall bladder burst.

The story is finished.

## B.4 Masalai piaune

### Introduction

The text *Masalai piaune* ‘The python bush spirit’ was told by Susan Bisam in Ossima in December 1999. The language of her choice was Tok Pisin. The title chosen by Susan contains the word *piaune*, which is a Kilmeri word, meaning ‘python’.

### Summary & background

The *masalai* or ‘bush spirit’ of Susan’s story has a family and seems to live in a settlement like humans do. The surprising part of the story is the fact that the bush spirit’s own people killed it because they mistook it for the human prey. Afterwards, only the sister of the murdered bush spirit refuses to eat its flesh. This accidental killing enabled the human to escape and return to his village.

Note the opening sentence of the story *mi laik wokim stori bilong masalai* (‘I like to work on a story about a bush spirit’). This could indicate that the story is ‘reworked’ and thus re-enacted in front of an audience each time it is told.

### Parallel text

*Mi laik wokim stori bilong masalai.*

*Dispela masalai. Dispela man em i ban-  
isim saksak. Em i trai i was igo igo igo  
igo. Nogat. Em i no painim pik. Ai bi-  
long en raun, em i silip antap long pan-  
gal. Em i silip indai, em i silip igo igo  
igo igo. Masalai man, em i raun long  
nait em i painim kaikai. Em i kam, em

i wasim saksak bilong en. Em i lukim  
dispela: Oh, man. Em i apim wantaim  
pangal. Em i karim em isi, yu i karim  
em, yugo yugo yugoo. Yu namel long  
rot nau.*

I want to tell a story about an evil  
bush spirit.

This bush spirit. A man built a pig  
trap in the sago swamp. He lay in  
wait for a long time. Nothing. He  
didn’t find a pig. His eyes were tired,  
and he slept on a pangal-platform.  
He was fast asleep and slept on and  
on. In the night a bush spirit was  
walking around and looking for food.  
It approached and saw the pangal-  
platform. A platform the women use  
for washing their sago. It saw the  
man. Oh, poor man! It lifted him up  
together with the platform. It carried  
him easily talking to itself: You carry  
him, you walk and walk along. You  
are halfway now.

## *B Traditional stories*

*Nau em i kirap. Em i no kirap strong, em i kirap isi tru. "Mi go olsem wantaim man karim mi." Nau em i kirap. Em i sindaun igo igo igo. Masalai man i karim em, em amamas. Em amamas long karim dispela man. Gooo. Em i lukim rop i hangamap. Man em i hangamap long dispela rop. Pangal nating em i karim. Igo igo kamap long haus bilong en. Na em i hol dispela rop, em i go antap long bikipela diwai. Em i stap antap tru. Diwai igo antap, igo antap, igo antap. Em i stap antap.*

The man woke up. He didn't wake up entirely, he became awake just a little bit. "I move as if somebody would carry me." Now he is fully awake. He sits up and remains in this position. The bush spirit carries him and feels good. It feels good because it carries that man. So it goes. The man sees a liana hanging down before his eyes. He hangs with his hands on the liana. And the bush spirit carried an empty platform! It went on and reached its house. The man had kept hold of the liana and climbed a tall tree. He climbed high up. The tree was really tall and the man stayed in the tree top.

The bush spirit went on looking behind: "Hey, an empty platform!" It said to its family: "Oh no, I ruined a great meal." They lit a flare. All of them went to find the man. The bush spirit went with them, it walked and came to that liana hanging down from the tall tree. "Oh, here he is. The man is here, is here, he is staying above." Now it said to its family: "You stay here, I will climb up." They smell: Yes, the man is above. The man stays above hiding. He is sitting high up in the tree top. There he sat.

The bush spirit climbed up. The hand of this bush spirit is white. Once its hand had broken, and now this part is white, is white. The bush spirit climbed higher and higher. The man in the tree top, being on watch, beat the bush spirit's nose. He wanted to

*em i singaut: "Oh em i kam, em i kilim em pinis." Man em i stap antap. Em i kilim dispela masalai manya. Man bilong ples em i singaut: "Oh mi kilim em pinis. Em i pundaun kam daun." *Naa man tru long ples, na i stap antap. Ol i kilim masalai, ol iya. Planti masalai. Ol i go ol i karim em. Gooo. Kamap long haus bilong en. Nau ol i katim. Ol i katim katim katim. Go. Ol i telim. Ol i kaikai. Ol i givim hap han long susa bilong ol. Ol i givim han long susa bilong ol. Susa bilong ol i no kaikai. Em i putim i stap. Em i putim i stap gooo. Tulait moning nau. Em i kisim dispela hap han bilong masalai. Em i kisim nau. Em i lukim dispela han. Em i tokim ol: "Ai, yupela i kaikai brata bilong mi. Yupela i kilim brata bilong mi." Ol i no toktok. Ol i tok: "Ol i rong pinis."*

*Man bilong ples i stap antap, em i kam daun tasol. Em i go nau. Em igo igo igo.*

kill it. The bush spirit fell down to the ground. The family there, they were calling: "Oh it comes. The other one hit it." The man stayed above. He thinks to have killed that bush spirit. He, the villager, shouted: "Great, I have killed it. It fell off, it fell to the ground." The bush spirit's family stood there, on the ground. Now they killed the fallen man taking him erroneously for their human prey. So they killed that bush spirit man. They killed him. Bad, too bad. He is going to die. They carry him. Lots of fine food.

And the villager, the human, he is still staying above. The others, however, killed the bush spirit, all of them took part in killing it. Many bush spirits. They went away and carried it. They walked and walked and arrived at its house. Now they start to cut the flesh, and they are busy with cutting the bush spirit's flesh for a long time. Then they shared the meat. Then they ate. They gave half of its arm to their sister. They gave the meat of the arm to their sister. Their sister didn't eat. She puts it aside. She puts it aside. It's becoming morning now. She takes that part of the bush spirit's arm. She takes it and looks at it. She says to them: "Ai, you all ate my brother. You killed my brother." They didn't say anything. Later they said: "Everything got wrong."

The man of the village above in the tree, he came down now. And he went

*B Traditional stories*

on and walked for quite some time, until he came to his village. But that bush spirit man, there is nothing left of him. We have killed it, have killed it indeed. Bad, too bad. They killed it and ate it up. Nothing is left. The villager has left behind that place in the bush. He finally arrived in his village.

That's the end of my story. Good morning now.

## B.5 Kukumbina na Kusudua

### Introduction

The story *Kukumbina na Kusudua* was told by Brigitte Esau from Omoi in April 2000. For some time, Brigitte joined my consultant team and came to my house in Ossima.

### Summary & background

While catching fish in a river, one of two sisters is tricked by a bush spirit. She seemed to be lucky, but the many fish she had caught turned out to be the gift of an evil spirit. The spirit did not show itself at the river, but only appeared on her family's doorstep the next morning. Then it demanded that the girl marry it. There was no way out of this situation and, thus, the girl Kusudua followed it down into the river, where both changed into snakes.

It is interesting to note that the sisters fished separately. One is said to have stayed upstream, the other downstream. This fact may indicate a potentially dangerous situation, as the sisters cannot help each other if one of them falls and is caught in a whirlpool. The story could therefore be understood as a warning to stay together and not fish on slippery rocks in the middle of the river. Otherwise one could drown.

Two sisters went fishing in the river. The younger one caught fish upriver, and the older one downriver. The younger sister caught many fish, but the older one caught only very few fish. Then the sisters turned back home and carried the fish with them. The older sister said to the younger: "You caught a lot of fish, but me, I didn't catch many." The younger sister replied: "You didn't catch the right way." "No, I did it well." Then the two sisters turned back home. The older sister informed the mother: "My younger sister caught lots of fish, but

me, I didn't catch many." The older sister countered: "As for you, someone gave you the fish to take." "No, I myself caught them, there wasn't anybody else." Then the two sisters went inside their room and slept.

The next morning, a bush spirit, a snake, had come. It was sitting on the ladder. It changed appearance and looked like a man, standing on the ladder. Its name is Mawatkawi. Father and mother said to the bush spirit, the snake: "What did you come for?" The bush spirit, the snake, replied: "I do not come for certain things. I come for your child." Father and mother repeated their question: "What did you come for? What do you want? A dog, a pig, chicken, fish, coconuts, breadfruit, sago?" It doesn't speak. Father and mother repeated once more: "What do you want?" The bush spirit, the snake, said to them: "Me? I want a wife, your daughter." Father and mother told the sisters: "While you were catching fish, the snake, a bush spirit, came here." The older sister said to the younger: "You were catching lots of fish, not me. Only you were taking them, not me."

Then father and mother had a party for her; they did that for the younger sister. They carried all the things, and while cutting firewood they wept. The bush spirit, the snake, went ahead and Kusudua walked behind. She followed it with her parents; they accompanied her. They stood at the edge

*mopoi.*

of the river. Then the snake gave its skin to Kusudua who now also looks like a snake. Then the snake changed back its own appearance from man to snake, and they went down into the river. They are gone for ever. Later on mother and father cried.

*Kuru stori kopi.*

My story is finished.

## B.6 *Pu paek*

### Introduction

The story *Pu paek* ‘The pond in the forest’ was told by Andrew Wapi in Ossima village in February 2000.

### Summary & background

A father is accompanied by his son on a hunting trip into the bush. The son is told to stay near the bush hut while the father goes hunting alone. Left alone, the son is visited by a bush spirit. The spirit measures the beds to find out which is his father’s bed. It also warns the child that it will come back the next night and eat his father. The son is suspicious of the visitor and tells his father everything. The father doesn’t believe a word he says and just wants him to enjoy the delicious food. But the son is right, and that night the bush spirit returns and kills the father. The clan then takes revenge and kills the bush spirit.

The moral of the story is that the deep forest is always a potentially dangerous place. One must always exercise caution. Certainly it is not the right place to eat large meals and then rest in a sound sleep without hearing warning noises. This is exactly what happened to the father. When transcribing the text with Margaret Osi, she told me that the father’s sleeping position indicates deep sleep (Sequence 33). So the father did not demonstrate the kind of behaviour required to withstand the challenges of the bush.

Some remarks to style and grammar of the narrator: Although grammatically mandatory, the narrator rarely uses the affixal dual of the verb. Instead, he often uses the prefix of accompaniment with a similar function. He also makes frequent use of topicalised pronouns for emphasis, while emphatic pronouns are not used. Furthermore, the text shows code-switching to Tok Pisin.

### Parallel text

watch out from there attentively." Having put him in the tree, the father left for the deep bush. He went and was roaming the forest. Before he had said to his son: "You watch attentively while you are up there! You keep watching attentively!" His father went into the bush. He was roaming the forest. The boy was sitting alone in the tree top.

There was a pond with brackish water next to the bush hut. The pond was quite big. It had almost dried up. At the bottom wood was visible. A bush spirit was living there at the bottom of the pond. From there it comes up to the hut. It asked the father's son: "What are you sitting up there for? Did your father put you up in the tree? Where did your father go?" "My father went into the deep bush. He is roaming the forest. He will come back soon." The bush spirit continued asking: "The two of you came alone, just in each other's company?" "Yes, we came alone." "His bed? Whose bed is this?" "This bed is mine. But my father's bed is this." "I will measure his bed. Our measure is the same. Later in the night I will come again. Tell your father!" "Yes, I will."

When the father came back from the forest, he brought a cassowary to the bush hut. He had shot the cassowary and brought it to their hut. Having cut up the flesh together, they put it on top of planks. The fire is going up. They kept the fire lit during the

evening. When they had cooked and eaten their food with some meat, father and son were sitting alone. After the meal they went to bed. The son said to his father: "Somebody came up here from the water bottom. I don't know who he was. He came up here from the water bottom. I really don't know who. He was measuring your bed. 'Today at night I'll come up here again. Today at night I will devour your father,' so he said."

"You are lying, you are talking nonsense, here's some cassowary meat." "How can I eat now?" protests the son. "You eat more of the cassowary, and tomorrow you watch out attentively." "No, it is true. What the man said is true." The father didn't believe his son: "No, no, you are lying, you are wrong. Here is the cassowary meat." "How can I eat now?" repeats the boy. "You just enjoy the cassowary with a good appetite." "Alright, OK." They slept together. At night the bush spirit came up from the bottom of the pond again. At night the father's hand touched his knee. While he's touching his knee, the dangerous pond lurks nearby. Having come up at night, the bush spirit swallowed up the child's father. Only the father it swallowed up. It broke his bed completely. It gulped him and broke the bed. It didn't swallow the child, and the boy was still alive. He got up in a bad mood, because the bush spirit devoured his father. After the human night meal, the

*Riyopuno ruri woise lo yilauyo. Yena kiniyo ki muelen epe kep roise: "Ai kopi masalai bakoniyok. Ine awe, nuko mole! Masalai ono yeni depi bamalapoko. De ke mopsi bo mui. Bike lili, de noro! bush spirit went down into the water again. The boy ran away and then was sitting between the buttresses of a tree until early morning. Then he searched for his father: "A python, no." The boy is pondering: "A bush spirit must have swallowed up my father, not a python. This was a man, a bush spirit swallowed him up."

So the child went tearfully back to the village. There he told all the people and also his mother: "A bush spirit swallowed up my father. You all come, let's go all together. The bush spirit, the man, measured his bed. 'You are talking nonsense,' said my father, 'There's some cassowary, you eat.' My father shot a cassowary, we were cooking it together, and then he was talking to me like this: 'Here's some cassowary meat, you just eat it. Your warning is nonsense.' 'You don't listen to my words, the bush spirit will swallow you up at night,' I repeated."

Then they all left for the bush. Having come together there, they saw the waterhole. They scooped the pond, the remaining water dried up soon, until there was only the bottom. Wood was visible because the water has gone. Down there the bush spirit lived. All the people shot arrows at it. Then it is dead. They killed this bush spirit. Having grabbed it, they cut it to pieces with their bush knives. Afterwards they went back to the village.

That's it, the little story.

## B.7 Ruri onona ruri pialna

### Introduction

The story *Ruri onona ruri pialna* ‘A human child and a snake child’ was told by Andrew Wapi in Ossima village in March 2000.

### Summary & background

A woman and her husband were staying in a bush camp when she was seduced by a bush spirit. She gave birth to twins, a human-like child and a snake-like child. In the early years of their childhood, the two unequal brothers lived together peacefully. As young adults, however, the snake-like brother began to behave like a real bush spirit. When they both went hunting, it killed its human brother. The clueless parents find the snake at home and beat it to death. In the end, the parents lost both of their sons.

The story may convey the following message: A husband should always keep an eye on his wife. If she gets pregnant by some other man, the sons will fight over their rank. Murder and revenge may ruin the family.

There is repeated code switching to Tok Pisin, for example in Sequences 10, 12, 13, 15, and 23. Andrew Wapi’s personal Kilmeri style makes very frequent use of the subordinating verb form for backgrounding (12 times) and tail-head linkage (10 times) for discourse coherence.

A husband and a wife went to their garden house. The husband said to his wife: “You stay here in the garden house. I will go into the bush.” He went to the bush. Having shot animals, he brought them to the house. They cut the meat and put it on top of the planks. They lit a fire and smoked the meat on the planks. After smoking the meat, the wife slept. Then a snake approached. She didn’t sense it because she was sleeping. The wife was sleeping, so she didn’t know what happened. The husband didn’t see the snake either, since he was roaming

the forest. He did not see the snake. The bush spirit snake and the wife had sex the whole time. They were having sex, while her husband was roaming the bush. The bush spirit snake came secretly to her.

The wife became pregnant. Having finished smoking the meat, the two of them wanted to go back to the village. They went to the village. The wife had a big belly: there were two children, a man-like one and a snake-like one. Not long before giving birth the two of them set off. They filled dried meat into the baskets. They wanted to go to the village, but a heavy rain came. A huge rain came; rain and storm broke loose. The rain prevented them from going. They didn't go to the village, but remained in the garden house. So they wanted to go, but no, the rain covered everything. They didn't go, no, no, the rain covered everything. The husband said to his wife: "You stay, you stay here! You sleep here. I only will go. I alone will spend some nights in the village."

Later the wife gave birth to the children, a snake child and a human child. The husband spent some nights in the village. One morning he came back there to the garden house. The wife had given birth to the children and let them suckle. After the breastfeeding he said to his wife: "Let's go to the village together." The wife went with the two children. The snake child she put into a basket, and the human child she put into the baby sling. They walked

to the village. There he said to the people: "My wife gave birth to twins, a human child and a snake child."

One child became a snake-like creature, the other one became a man-like creature. The mother took care of the two. She let them suckle. The snake-like one was growing, and the man-like one was growing. They have become big. Then they fenced pig traps for hunting, two traps. The human brother fenced two traps, because he also fenced one for the snake brother. He did the trap fencing. The light of the moon will soon come back. The moon needs to shine. Now the moon shines brightly on the bush tracks. Then they left together. The older brother was lying in wait near the pig trap, and his younger brother was also lying in wait near the pig trap. The snake went first and shot a pig. Having shot the pig, it went ahead and left first. Near the bush camp, it placed a log horizontally. After curling up beneath the log, it put its head outside on top. There it was waiting for the man, its very own brother. When the man had also shot a pig, he stayed in their ready made bush place and straightened it. While sitting he turned his belly there, towards the snake. The snake put its head on top of the log and was watching. It shot arrows at the man's breast until the man is dead. Having killed the man, the snake went home to the village, to its house. The older brother had

killed his younger brother. Then he went back to his home in the village. The snake-brother entered its room and curled up on the floor. After curling up at its place, it put its head on top of the body.

Soon the night is over. Their father and mother quickly checked the situation. The sun shines brightly, yet the two don't rise, the younger and the older brother. The human brother isn't here. So the mother said to the father: "Go and check the pig trap! Look what might have happened there." The father is quickly frustrated in waiting for the man-like brother. The snake must have killed its older brother. He is already stiff. He is dead, the limbs are stiff. Oh, they have already infested the body, the maggots have infested the body. Then the father brought the dead son to the parents' house. The snake killed its older brother; the older brother was killed by the snake brother.

Having fetched some sticks, mother and father beat the snake fiercely. They beat and beat. They beat it out of the house. The snake jumped on the ground. So they beat it fiercely outside. The snake brother is dead. They cut wood and lit a colossal fire, a huge fire. They put the snake on top of the fire. Soon it was bones only, charred only. Having dug a hole for the human brother at the burial place, they threw him down in the grave and covered the hole thoroughly.

That's it, thank you.

Figure B.2: Garden hut

## B.8 Urai ako wiye

### Introduction

The story *Urai ako wiye* ‘A crocodile catches a woman’ was told by Andrew Wapi in Ossima village in February 2000.

### Summary & background

When a married couple returned from a stay in the bush and a successful hunt, they encountered a crocodile while crossing a river. The woman was caught by the crocodile, which turned out to be a bush spirit. The villagers tried to free her from the evil spirit, but it had already eaten all but a few remains of this human meal. The remaining bodyparts were given a usual Christian burial. This story combines a death due to the old way of life with a newly introduced Christian custom.

Like all the large rivers in the area, the Puwani was also the habitat of crocodiles. The crocodile population must have been quite large, otherwise the crocodile hunters would not have come to the village. It therefore makes sense that there would have been crocodile attacks and villagers would have fallen victim to these predatory animals. It is likely that after a person was killed by a crocodile, other people tried to recover a limb or the head of the deceased by diving into the river, as the story tells us.

The narrative begins and ends in Tok Pisin. In the first sentence Andrew Wapi introduces himself as a story teller.

### Parallel text

My name is Andrew Wapi, I like to tell an ancestral story.

A husband and a wife went to the bush and stayed there some days. While roaming the bush they caught animals. The wife attached a supporting part on her basket to stabilise it. The husband tied the arrows he had not used on the pannier. Things were ready to go. After having lit a fire for a short sago meal, they transported the killed game in baskets. They carried plenty of meat and climbed the river-

bank. The husband descended to the river and went ahead into the water. The husband crossed the river first and then was staying over there on the sand. The wife crossed the river behind him, together with the basket.

When the wife reached the middle of the river a crocodile caught her there, right in the middle of the river. But the crocodile was man-like. The crocodile had the spirit of a human. Having caught the wife the crocodile-man carried her inside his house at the bottom of the river, together with the basket of meat. He carried all together, held it and put it inside. Yes, the crocodile is a bush spirit in its house; before the spirit had a crocodile's skin. Only the husband is left. He went alone to the village; he went there crying. He reached the village and told the people: "My wife! A crocodile caught her together with the killed game. A bush spirit got hold of everything, it took her together with all the meat. Well, after having slept, let's go together to the river tomorrow morning and dive into the water."

They were searching jointly for the woman whom the crocodile had caught. One man went down into the water first. Having come down to the bush spirit's house there, he knocked on the door and asked the bush spirit: "Is the man's wife here?" "Yes, she is here, yes." "Won't you give her back to me from your house?" "You better go!" Then the people did nothing but

*Ki alakiye, ki alakiyeke.” Uki kepro ki muelno. Uki kepro kukûnapno muelne: “Ko ako ikapro. De wepulo, de wepulo-ro yipyo. Nake?” “Ari. Ko banok. Hap solo lili. Hap solo ko parno lolo. *Yena uki kepro wo roise kuppuapno olyo. Yena wo roise wel. Masalai noro. Hap solo baka banok. Hap solo welro yilauyo. Mi yilauyo planimpo. Lupi solo kwilipno, mi yala rar.*

*Em tasol tumbuna stori.*

this: A man went down, a man went down, one after the other, one after the other. When the last man came down, he said to the bush spirit: “Her husband sent me, I will fetch his wife.” “Yes, his wife. Tell him: he himself should come down. He should fetch her, he should come and fetch her.” The last man told that her husband. Now he goes down and says to the bush spirit: “My wife. You brought her there. You brought her to your house. Is she here?” “No, I have eaten her. There is only half of her left, one half only. I tied her remains on the pannier. Now I’ll give her to you before you go up again. You carry one half, but the other half I have eaten up.” Having gone down her husband answered the bush spirit: “I want to carry her up.” The bush spirit gave her remains to him together with the pannier. Half of her it had cut off in the middle. One half it had cut off and eaten up. The husband carried her remains up to the riverbank.

The people and husband climbed the riverbank in tears. Several people carried the wife’s remains. The bush spirit had ate only half of the woman. One half it had eaten up. Only the second half they carried to the village. Then, in the village, they buried her. Having brought only a part of her, they dug a hole for burying what is left of her.

That’s it, the ancestral story.

## B.9 Masalai pukpuk

### Introduction

This is Susan Bisam's version of the story "Urai ako wiye" in Tok Pisin. She told the story in Ossima in December 1999. The same story was later told in Kilmeri by Andrew Wapi, February 2000 (cf. Text B.8).

### Summary & background

The title *Masalai pukpuk* 'The crocodile bush spirit' was given by the narrator.

The narrator Susan Bisam interprets the husband's hesitant behaviour as fear, an aspect that does not appear in Andrew Wapi's story. In terms of content, there are a few differences to Andrew Wapi's version. Firstly, in Susan's version, the villagers eat all the meat that the husband had brought back from the couple's stay in the bush. Secondly, the crocodile only eats one arm of the victim, whereas in Andrew's story it eats half of the body, leaving no *meri tru* 'full woman' to bury.

Susan had a remarkable knowledge of old stories and so it would have been a loss if she had not been given the opportunity to tell some of these stories in the language that suited her best. She is a great storyteller and would embed her tales in an atmosphere of wonder and drama. Indeed, she spoke with a theatrical voice and expression, making the audience feel like they were watching scenes on a stage. She speaks in short sequences with many repetitions and prolongations of vowels; these prolonged vowels are given a tonal melody. The transcription tries to preserve this as much as possible.

was first. He managed to cross and waited for his wife on the other side of the river. She was loaded with meat. Slowly she crossed the river. But there was a crocodile that smelled the meat. It came near and got hold of the woman. It pulled her down into its underwater house. Meanwhile the husband got suspicious and looked for her. "Oh, my wife got caught by a crocodile!" He took their meat and reached the village. There the people had a big meal.

Now the man told them: "My wife was caught by a crocodile. She disappeared under water." All the people got up, took their bows and arrows and went to the river. They went right to the place where the woman had got caught. There they stayed and started to dive into the river. One man dove first. He came to the crocodile's house and said: "We come to get back the woman." The crocodile replied: "Sorry, I won't give her to you. You just go back." So the man left and came back to the river bank. He told the waiting clans: "The crocodile refused to surrender her."

Another man dove down and came to the crocodile's door. "Crocodile, we come to get back the woman." The crocodile replied: "I don't want to give her back. You better go." So this man said again: "The crocodile refused what we want." The next man went down into the river and stood

*"Mipela i kam bilong kisim meri." Em i tokim ol: "Sori, mi no bilong givim em yupela. Yupela i ken i go bek." Dispela man, em i go antap bek gen. Go, i kamap, em i tokim long lain: "Man. Em, i strong tumas. Olgeta traिम traिम, em i les na givim dispela meri long ol."*

*Las bilong en nau. Em dispela man i go daun nau. Em i tokim pukpuk: "Mi kam long kisim meri." Em tok: "Nogat. Yupela i go bek. Mi no givim long yupela." Em i kamap, na em tokim meri – man bilong en: "Yu yet bai i go daun. Mipela traिम traिम. Em i les bilong mipela. Yu bai i go daun. Em bai givim yu." Man bilong en, em i pret. Em i pret. Em i tokim em: "Mi kam long kisim meri." Em i tokim: "Yu kam pinisyaya." Em i tok: "Yu wet." Em i opim dua, em i givim dispela meri bilong en. Em i tokim em: "Wanpela han, mi kisim pinis. Bodi, yu kisim. Meri tru yu kisim i go antap." Em i kisim dispela bodi. Em i karim i go antap. Kamap long graun. Ol i wokim bet. Ol i karim em. Wanpela han, em pukpuk i kaikai. Ol karim i go. Ol i go planim em.*

in front of the crocodile's door: "We come to get back the woman." "Sorry, I will not give her to you. Just go back." The man had to go up empty-handed as before the others. "Oh boy, this crocodile is unrelenting. We try and try, but it won't surrender her."

Now the last man dove into the river and said to the crocodile: "I come to get back the woman." As before, the crocodile replied: "No way. I won't give her to you." So the last man left and said to the wife's husband: "You yourself have to go down to the crocodile. We tried everything without success. It will give her only to you." But the man is full of fear. "I don't want to go, I don't want to dive into the river." They tried to convince him. He thought about it, and finally he acted. He came to the crocodile's house and said: "I come to get back my wife." The crocodile replied: "Finally you came. Wait!" Then the crocodile continued: "One arm, I took one arm. You take the body. You take the woman and go up with her." The husband brought his wife up to the river bank. There the people dug a grave and put her in. The crocodile had eaten only one of her arms. So they could bring her to the grave and bury her.

## B.10 Nana puyo seku

### Introduction

The story *Nana puyo seku* ‘The lost knife’ was told by Margaret Osi in Ossima village in August 2001.

### Summary & background

This story is about the loss of a knife that was returned by a friendly spirit. The spirit lives at the bottom of the river into which the knife had fallen. This knife was only borrowed and the bearer was afraid that he would not be able to return it to its owner. Both journeys of the man Wau, who was eventually lucky, ended successfully: his journey down to the bottom of the river and the journey up and back to the village and to the owner of the knife. Interestingly, there seems to exist a kind of parallel world at the bottom of the river where people live. They go to work and come back from work. These underwater creatures are potentially dangerous for the visitor Wau and he is advised to leave this place as quickly as possible. Margaret Osi did not comment on the nature of the underwater people.

Kilmeri does not have a term for ‘lending, borrowing’. Instead, something is given *biapno* ‘for a while’ and the duration of use has to be negotiated. However, there is a clear obligation to return the borrowed item.

The opening formula of the text is in Tok Pisin. There are also some sentences in Tok Pisin later on.

I want to tell a story connected to Jeffrey and David.

Wau dropped a small knife into the river. The knife fell into the river. The small knife sank down and landed on a man’s breast, on the breast of an old man. The old man took the knife in his hand, another man’s knife. Meanwhile Wau went back to the village where he is asked about the knife. “Wau, what about the small knife? Where is it?” “The small knife fell into

*"Yala ko asa le rope?" Pu ikoipo, umul nekpamu. Klapno puap moiko, puap ilei ileimainu. Komoipno wepulo, kwe-pulapno pako puyo. "O, upuna, ko yala upuna kûne." Lupi baka kewipp buri-polip. Nana ulili, we. De minalap! Yena wokyo molo, yena mi yala dupulupi. De inalap! Yala de kilimpi, de minalap, hariapya! De inappuap, yala de suellui."*

*Ono bepi sũ Wau ponamo. Wau ppuero sũ roise. Sũ bepue solo, sũ bamuriko. Mi kuppuero, kuppuero, kuppuero. Kamap oloyo, paeau, eppinoyap. Ri lupi suker-pop: "O Wau upini." Kenekipno yipyo lo, sano: "Waue, de nana bapiyeko?" "Ko bapiyeko, we, nana mi oki."*

the river." "You hurry up again and go to get it!"

"What am I going to do now because of this?" thinks Wau. The river was deep and he pondered. He went away. He cut a liana of wild limbum. A long liana, a very long one. Having cut it, he took it to the river and threw it into the water. "Oh, well, now I can go right down." The other end of the rope was tightened vertically above the water, there it starts. Then Wau went down, further down, further down, further down. His hand touched his ear. There is the magic blood of a corpse. He went on. While he was gliding through the water, he spit the blood out in order to make the water opaque so that he cannot be seen. He became aware of the old man. He arrived at his place. "Ah, why did you come?" "Ah, I am looking for the small knife." "The small knife, I took it, yes. Here it is, the small knife, look. Hurry up again! The people went to work, yet they will soon return. Hurry up! They will kill you, hurry up, hurry up! Go up quickly, otherwise they will kill you by cutting the rope."

The old man gave Wau a firestick. Wau is going up with the fire. With a glowing piece of firewood only, the flame has extinguished. He is going up again, going up, going up. He reaches the river bank, arrives there and rested. The end of the tree was creaking, "Oh, Wau is coming up right here," says a companion who stood

near the river. Wau stood there for a while. Then he went back to the house and people asked him: “Wau, you have got the small knife?” “I have got it. Look, the small knife, here it is again.”

*Bo kuru.*

The end of the story.

## B.11 *Wîs yako*

### Introduction

The story *Wîs yako* ‘The moon woman’ was jointly told by Susam Bisam and Margaret Osi in Ossima village in September 2004.

### Summary & background

This story is a legend about the origin of the moon. People have always wondered how the light of the night came into being. Here, a beautiful but kleptomaniac woman abandoned her confused and sad husband and fled into the sky, where she became the moon. She was the man’s second wife. His first wife had understood that she was not like other people. She warned the husband not to affront her and hide her. But he became jealous. So she decided to abandon the place and built a ladder to the sky.

The last two sequences of the story reflect the kindness as well as the usefulness of the moon. It turns the darkness of the night to light and enables people to move safely.

Moon stories are quite common in New Guinea. The moon is usually associated with a woman. But in some oral traditions, the human who changes to the moon is male, for example, in Muyu (Zahrer 2025: 33). In a legend of the Orokelo (Gulf Province), sun and moon are two brothers; the moon is the younger brother. During the day, the sun is a beautiful young man. But during the night, the moon receives all the beautiful adornment and radiates like his older brother (Kiki 1969: 42-26). Generally, I want to point to Beier’s collection of Papuan tales about sun and moon (Beier & Chakravarti 1974).

came and was looking at the garden, "Eh, the bananas are all good, they have become ripe." She went back to her house, took a bush knife, cut plenty of bananas, and carried them home. She returned to the garden and grabbed more food. With tobacco, spinach, and *aibika* she left. She filled baskets with betel nuts and wild sugar cane and carried everything to her house. But soon the food was completely consumed. The house was empty.

The man went himself to his garden, "Eh, who cut my bananas? What am I going to do now? I will stay and watch closely. I'll hide well. Which person will come here? Who secretly steals my things?" At night a woman came in the garden. The man was standing at the foot of a *pasok*-banana, "Eh, a woman is walking around and looking for bananas." She cut four bananas and a *pasok*-banana, five bunches of bananas. She put them on the ground. While the man was standing there within touching distance, she put them on the ground. Then he stretched out his arms and held her tightly. He grabbed the moon woman with both hands and said: "Now I have seen you. You did that by habit. Now we two will go together to my house." But the moon woman said to him: "No, we'll go to my house." So they went to her house and were living there. The moon woman gets pregnant. Then they went to the man's village. There

he left her behind at the toilet house. The man asked his first wife: "Do you agree that I brought another wife?" "Where did you leave her?" "I left her over there. I wanted to ask you first." "Yes, I agree, go bring her! We'll live together." He took the new wife to the house. The first wife said to her: "Come, you live in this place. I live here, you live there." So they were living on.

The moon woman gave birth to a child. She gave birth to a boy. He laughed, he could sit, he crawled. One day the man wanted to visit a feast with his first wife, but she said: "We'll tell the second wife." "No, she should stay at home. We'll go alone to the feast." At that the moon woman said to the first wife: "Leave me your child. You take my child." She locked the door behind her. Then the moon woman took buckets to the river and carried water back to the house. She cleaned the floor and the boards in the house. Then she made a long ladder. She made a ladder up to the sky. The sky is very close. She made a baby sling for the child: a sling in the back, a sling in the front, a sling around the neck. The moon woman carried the boy piggyback.

She carried him up along the ladder, looked down, and called to her husband: "Ai, ai, ai, here I go." She vanished like fire. The man lamented: "My wife goes away over there. How do I feel? My heart is broken. I am so

*Yako maki, yako mukari. Nuko yako pari, yako yilau bayanapi. Rope de asa pono? Balok.*

*Wīs bo kuru.*

sad.” The first wife replied: “I warned you and said, let’s go together to the feast. You didn’t want that. You were jealous. You kept her away from other people. The woman is kind-hearted, and she is young and pretty. She’s not a woman of us. She belongs to a different place. Why did you offend her? She has gone for good now.”

The moon came up here to the sky. The woman stays forever in the sky together with her child. It’s the child of the older sister. Its name is Awau. During the day the moon doesn’t shine, it shines only in the night. The moon is friendly. I provides the people a path of light. The moon is like daylight. It shines brightly. You see your path well and walk safely.

The moon story is over.

## B.12 *Wîs puli*

### Introduction

The story *Wîs puli* ‘The moon shines’ was told by Brigitte Esau from Omoi village in September 2000. For some time, Brigitte joined my consultant team and came to my house for language work.

### Summary & background

At first, the moon was a light globe. It belonged to a woman who used to work at night. When other people saw what she was doing, they attempted to steal the light ball. But it escaped and found its way into the sky.

The story is probably longer than the version given here. The narrator knew the story as it was told to her by her mother. The mother’s version was certainly more detailed.

### Parallel text

*Kimike dukiro wîs appyo ar nakoulipop. Yena nini solo riyepop. Yena wok ninino solo poulipop. Yena wal hukno ninino solo poulipop. Yena due ninino solo poulipop. Riyopuno yakume wok puni poulipop. A long time ago the moon was not in the sky. The people saw only the sun. People did their work only under the sun. People hooked fish only during day time, and people made sago only during daytime. Then a certain woman was working at night. She was hooking fish at night. The people talked among each other: “This woman works always at night.” The people followed her. The woman grasps the moon, and the darkness becomes light. She takes the night away. Then the woman puts the moon up in a tree and was doing her garden work. While the people were running after her they said: “The moon is like a ball, we’ll steal it.” The woman held it fast. But finally the people stole the moon. But they let it go away, and so it is

in the sky forever. Now we say: “The moon shines.”

*Bo kuru.*

End of the story.

## B.13 *Nini na wîs*

### Introduction

The text *Nini na wîs* ‘Sun and Moon’ is a song sung by Margaret Osi in Ossima village in January 2000.

The oral tradition of texts recited to an audience is complemented here by sung texts. The spectrum of singing is quite limited and reminds the listener more of musical recitation than of songs. Certainly, singing is just as important culturally as is storytelling. Spoken texts are often enriched with sung words that underscore the importance of certain names or phrases. In such cases, the genres of stories and songs overlap. An example of this is the Tok Pisin version of Text A.1 *Am*, which is spoken and sung by the storyteller Usikul.

### Summary & background

Margaret Osi sings a song about the sun and the moon. She composed the song herself. Sun and moon are supposed to provide light to overcome the darkness of the night. Her Kilmeri paraphrase of the song was *nini napiya*, which means ‘the sun comes in and fills the room with light’. The song consists of four sequences structured in verses: 1 1 2 2 3 3 4 4 1 1 2 2. Each sequence begins with a long melodic vowel, either *eee* or *aaa*.

The song was Margaret’s response to my request to hear her sing a traditional song. Unfortunately, this was the only Kilmeri song I ever heard her sing.

The phonological structure of the song differs from that of spoken Kilmeri. Stressed vowels at the end of a word sound like a rising diphthong (Sequences 1 and 4). The verb *pini* changes to *rini*, probably due to assimilation of the place of articulation to the preceding and following /n/ phonemes (Sequences 2 and 3). Lastly, the emphatic suffix *-ya* becomes *-ye*. Again this can be seen as assimilation to the high vowel /i/ which dominates Sequences 2 and 3.

## B.14 *Bike iwanyo*

### Introduction

The story *Bike iwanyo* ‘Why cassowaries do not fly’ was told by Margaret Osi in Ossima village in September 2001.

### Summary & background

This is a traditional story, which is widely known in the western part of Papua New Guinea. Probably, it originates from the Kopar and Watam people in the coastal area of the East Sepik province. Margaret Osi and Susan Bisam both knew the story. I asked Margaret to tell it in Kilmeri, and she did that without hesitation. For a more elaborated version of the story see Slone (2001b: 591-592): “Why Cassowaries Do Not Fly Anymore”.

The cassowary is a flightless bird, although it has the phenotypic characteristics of a bird. This obvious discrepancy had to be explained and probably motivated people to invent a story. In Kilmeri folk taxonomy, cassowaries are not categorised as birds but as ground-living animals such as pigs, kangaroos, possums, rats, etc.

### Parallel text

*Iwan ke bike muelno: “Depe asa nake rileyo riyo? De yala ar nake rileyo. De yala yeloyo kûni.” Iwan paki bikepi weno. Bike yeloyo kûno. Ri ini rupuo. Bike yeloyo ri roise seku. Iwan ri rupueno. Bike paki kana wayou. Iwan paki bikepi baweneko, asa lam. Bike yeloyo nakeko. Bike paki wewolono. Iwan rileyo lo. Riyo nakeko. Riyopuno banakepisiko. Bike liki iwanpi piyo, iwan liki bikepi piyo.*

One day the hornbill said to the cassowary: “Why do you live above in the trees? You won’t live there anymore. You’ll come down to the ground.” The hornbill broke the cassowary’s wings. The cassowary came down to the ground. The tree branch broke. The cassowary fell down to the ground together with the branch. The hornbill broke the branch where it was sitting. The cassowary tried to move its wings. It tried that in vain. The hornbill has broken the cassowary’s wings. It cannot fly anymore. So the cassowary sat on the ground. The cassowary’s wings were broken altogether. Now the hornbill

went up in the trees. There it sat. Finally they live forever like this: The cassowary took over the hornbill's place, and the hornbill took over the cassowary's place.

## C.1 Ai kopi basuiko

### Introduction

The story *Ai kopi basuiko* ‘My father’s death’ was told by Margaret Osi in Ossima village in February 2000.

### Summary & background

Margaret’s father is said to have died through the intervention of sorcerers, who caused him to die slowly through attack spells. The victim was still alive a few days after the attack, but it is said that he was still killed by the attack. Here Margaret adopts the widespread line of argument that a person’s death is never caused by medical problems but by human intervention, especially sorcery (see Gerstner-Link 2018: 14-15). This position was not discussed between her and me.

The story begins with the wizards’ ambush after her father Apai has had a happy hunting experience. Then the sick man is taken from the bush hut to Ninggera and from there to Pasi near Vanimo. Instead of seeking help at the hospital in Vanimo, he was taken further to the villages – probably to Omoi – and to his relatives. He soon died there and then was given a Christian burial. I was told that people still wish to die in their own village rather than in a foreign place.

planks side by side and lit fires underneath the planks. The meat became dry. Part of it they cut with a sharp cassowary bone for their bush meals. The other meat they cut with the cassowary bone to take it home to the village. The sorcerers heard something: "The two stay in the bush. Apai is staying in the bush." The sorcerers went there. From a higher spot they looked down to him. Then they left the place.

Later the sorcerers came back. They killed him at the river, when he was bathing. My mother didn't see him ensorcelled. They killed him secretly. Then the sorcerers rouse him by means of the blood of a dead human. He stood up. My father got up and went back to the bush hut. He stayed on there. For one week he remained in the bush hut. Then he became sick. He was very sick. Sîp, a man from Ninggera, thought: "He will die soon. I will go together with him to Ninggera by canoe." One night he stayed in Ninggera until daybreak. In the morning he picked him up by canoe. With my father in the canoe, he paddled through the mangrove swamp. They arrived in Ninggera. He left the canoe and walked with him on his shoulders. Sîp brought him to his house and left my father there. Then he went and looked for a car. He met my uncle and told him: "Margaret's father is sick. He is very sick and he may die." A car came from Vanimoy. The car went along the mangrove swamp.

*Bo kuru.*

They picked them all up, my father, my mother, and my brother. Together they came to Pasi.

All rested. Op, Margaret's uncle, smelled his mouth and said to them: "Some sorcerers went down killing him. He may die. All of you go together to the village." They brought him by car. He shouldn't die on the road. The sick man rose again a bit, and they gave him water to drink. They drove him to his house. There they put him down from the car and went together to his house. There they bedded him on his bed. During the night he dies. Somebody said: "Tell his daughter that her father has died." When they came to me, I told them: "The river has risen and I have a baby. I will come in the morning by canoe. I'll cross the river by canoe." I cried. I cried desperately. The people dug a hole and got a coffin ready. They were making it. Then they lifted him together with the mattress and put him down into the coffin. Now they carried him to the burial place, shut the lid of the coffin, and let it down into the hole. They covered the hole and put sticks together as a small fence. They covered it. It's covered properly. So they went back to their houses.

End of the story.

## C.2 Ruri Epek

### Introduction

The story *Ruri epek* 'The ancestral spirit' was told by Margaret Osi in Ossima village in February 2007.

### Summary & background

Sago processing is one of the women's main occupations. They take their babies or toddlers with them when they spend a day in the sago swamp. Sometimes the children are carried in a big bilum while they work, sometimes they are placed on a *pangal* platform to sleep. This is an opportunity for the spirits to invade the child's mind and disturb its rest. The child can no longer be soothed by breast-feeding. A magical ritual must be performed with a specific plant to drive the spirits away. The leaves and bark used for the ritual could not be identified. The bark, which is chewed and spat on the child, may contain a calming substance.

One possible natural reason for the baby's restlessness is the omnipresent insects in the sago swamp and, to a lesser extent, in its own home.

Figure C.1: Pounding sago

The mother went to the sago swamp. She took her baby with her and put it in the baby sling. They went to the swamp. She pounded sago in company of her child. She let the child sleep on a platform and was busy pounding sago. Then she got the trough for kneading and washing the sago pith ready. She brought the pith to the washing place and washed it in the trough. The child was sleeping, and she was busy washing sago. Soon she had finished the pith. She brought more and went on washing the pith. Again the pith is finished. So she went once more to get a new load of pith for processing. Carrying sago pith and washing it kept her busy for quite some time. Finally she had used up all the pith. Now she cleaned the filtering net and the trough.

She sat down for a while. First the rinse water of the sago pith has to be clean. Now the rinse water is clean. She tipped out the dirty water and took the sago flour. She took the flour and the trough, the basket and the net. Finally she filled the flour into a basket. The child woke up and cried. She cried for the breast. The mother let her suckle, and the child was drinking. Then the mother put the cloth around her neck and the child into the baby sling. She lifted up the baskets with sago flour. She carried the baskets on shoulders and head. So they returned back home.

Buai, Epek. The ancestral spirits. Epek watches the baby. He accompanies the little child to the house. There the mother set the flour down. She set down the baskets. Then she heated water on the fire. The water boiled. She took sago in a dish and stirred it in. The sago is ready. She portioned the sago with wooden sticks and cut it into pieces. She put the portions on leaves. Now she cooked vegetables. The vegetables are done. She took them together with the pot from the fire and distributed them on the plates. She gave food to her children and their father. And also to herself. They all ate vegetables with sago. They have finished the meal. The little child started crying. The mother gave her the breast, but the baby didn't suckle. She was rejecting the breast. She didn't suckle. Epek, the ancestral spirit, watched the child. The parents put *ep*-leaves around the bed. They were putting them at the edges of the bed. Then they spit chewed bark on the child. Soon the child was silent. The ancestral spirits had occupied her. Now they have left her. The crying stopped and the baby is quiet. Now she wants to suckle and is fine.

### C.3 Ko lelo piu no

#### Introduction

The story *Ko lelo piu no* 'Eating geckos and frogs' was told by Margaret Osi in Ossima village in February 2007.

#### Summary & background

Processing sago is hard work. Normally you spend the whole day in the sago swamp. Often the family works together, but in this story it is only the mother and her young daughter who go to the swamp together. It is commonly assumed that children are fairly independent once they are able to walk properly and climb smaller palm trees. They would look for something to eat during the long hours in the swamp. When they were hungry, they would look for small animals such as geckos and frogs and roast them in the fire. Here Margaret Osi recalls her own childhood. Back then, she took pride in catching these small creatures, which would be the only food or sometimes a nice addition to a small portion of sago jelly prepared by her mother.

When I was invited to accompany Susan Bisam to the swamp, she cut down a young palm tree to eat the white flesh at its upper end. It looked like a 30 to 40 cm high cone and tasted fresh. It was a special treat for the children who had come with us.

Piu rondupua*

My mother and I went to the sago swamp. We pounded sago pith together. My mother was pounding, while I was sitting down on a palm rib and watching her. There was plenty of sago pith which she shovelled into a basket. She shovelled pith into several baskets and carried it to the kneading trough for sago washing. She put the trough in a circle of wooden sticks. The trough was stably placed in the middle of it. Then she put sago pith into a palm rib container. The pith went down into the trough. She bucketed water and poured it on the sago pith. She poured it down and was washing the sago. Having washed for some time, the sago pith was used up. Then she shovelled more sago pith, brought it, and washed it in the trough. She was washing sago. She was washing sago incessantly, while I was sitting there. I was just sitting idly. At last I said to my mother: "I feel hungry. I will seek geckos and frogs. I will look for some for food."

Off I went. I climbed a *numomo*-sago palm and looked for frogs and geckos. I climbed up and looked down (into a palm rib): Here is a frog. I caught it and threw it on the ground. I looked also into the *numomo*-palm rib on the other side of me: Here is a gecko. I caught it and threw it on the ground. I went down to the ground. I took the frog and the gecko and wrapped them in a leaf. I climbed another sago palm

*rokini rupueno lolo, meli yeiyo. "Piu lelo de luwapo?" "Ko baluwapoko." Ko sũ mappoipe. Ko rupueno re, piyo sũyo. Sũyo rap. Ko puliyo sũyo. Ko piu rupue nepe. Epe kopi piu ko namo, dupua. Ko ike piu dupua leloyo. Koyo inoi.*

and looked down into the *numomo*-palm rib: Here is a frog. I caught it and threw it on the ground. I looked also into the palm rib on the other side of me: Two frogs were sitting there. I caught them and threw them on the ground. Then I went down to the ground. I wrapped the three frogs in a leaf to carry them to the trough where my mother was. "Did you catch frogs and geckos?" "I have caught some." I lit a fire first. Then I took them in the leaves to get done in the fire. They were roasting in the fire. I took the frogs off the fire and took away the leaves. I gave two frogs to my mother. I myself had two frogs and the gecko. We ate.

The sago is washed. My mother tipped out the rinse water. She took the trough together with the sago flour. Then she filled the flour into baskets and lifted the heavy baskets up on her head and shoulders. We walked back. Having washed sago all day we went to our house. We reached the village. My mother climbed the ladder and set the sago flour on the porch. She lit a fire and boiled water on the fire. The water boiled. My mother put the sago in a dish and stirred water in. Soon the sago is ready. When it was done, she cut it in pieces and put the portions on leaves. She set them aside. Now she cooked *tulip*-vegetable in a pot. When the *tulip* was done, she took it out. Then she cooked mushrooms. She put them in a pot and

cooked them over the fire. Soon the mushrooms and the *tulip*-vegetable are done. She took them out of the pot, put the plates on the floor, distributed the vegetables, and gave them to us. We ate. We finished the meal. All the food is eaten up, and we were sitting and resting.

*Bo kuru.*

End of the story.

<sup>4</sup>Grammatical comment: In standard linguistic semantics, constructions with *seek* are considered ambiguous due to a scope distinction: in the specific reading of *x seeks y*, *y* has wide scope over *seek*, meaning that there is some (specific) *y<sub>i</sub>* such that *x* seeks *it<sub>i</sub>*. The non-specific reading has this order reversed, in the sense of *x* seeking some or other *y* with a certain property. In Kilmeri, by contrast, there is no scope ambiguity involved at all. Instead, in the non-specific reading of some or other frog being sought the feature [-ANIM] is assigned via the verb form *riye* in the second clause, and once a specific frog is talked about, we find the feature [+ANIM] via the choice of the existential-postural verb *nake*, in the fourth clause of Sequence (5).

## C.4 *Ai kopi yip papi*

### Introduction

The story *Ai kopi yip papi* ‘My father builds a house’ was told by Margaret Osi in Ossima village in February 2007.

### Summary & background

The house that Margaret’s father built is a family home. The events described took place around six decades ago, but the construction technique she describes is still used today. The only difference is the use of nails instead of ropes. My own house was also built the way Margaret describes. The supporting posts, which are anchored in the ground, are usually made of ironwood (*Intsia bijuga*), a hard wood. The floor of the house is about 1 metre (or even higher) from the ground.

The use of six support posts results in a house that is about 6 metres long and 3 metres wide. That’s a rather small floor plan. As we see in Sequence 15, the fireplace was inside the house. Nowadays, people often have a separate kitchen house (*haus kuk* in Tok Pisin) of about 6 square metres where all meals are prepared. Traditionally, the Kilmeri had single-family houses owned by one family. The communal houses included a house for adolescent men and the men’s house for ritual purposes. The latter were absolutely taboo for women (see Text A.4). Each village had its own men’s house (*haus tambaran* in Tok Pisin), and the men would sleep and eat there (see Sequence (9) below). This was also the place for conversations and discussions. The spheres of life of men and women were thus relatively separate - a fact that Margaret Osi often repeats when she comments on the “modern” way of life. Above all, women did not have as many children as they do today. According to her, four children were normal compared to six to eight children today.

Some remarks to Margaret Osi’s narrative style: The work steps are usually described in two clauses. First the action clause appears in the punctual past tense, and then the result is given in a separate clause in the modality of resultative factuality. The descriptive sequence of action and result, repeated for each work step, depicts the process of building the house perfectly. Note also the list of words and phrases indicating daybreak in Sequence (9). This adds a poetic touch to the scenery and the narrative. The sunrise itself cannot be seen in the forest. But you can see the change from black to grey to light.

My father cut posts. He cut them to size. He felled other trees and cut them in shape from trunk to top. He felled more and cut them in shape from trunk to top. He felled still more trees and cut them in shape from trunk to top. He put together six posts and placed them on the ground. Finally he went back home to our house and rested there for one full day. He thought about what to do next. “We go and carry the posts.” So we went off, me together with my parents. We arrived at the place where the posts were laid down. There we were staying and lit a fire. My father started carrying posts and put them at the place of the new house. He returned, took others, and carried them to the place of the house. He came back again, took another one, and carried it to

the construction site. He laid it down there. He was busy like this. He transported trunks and stems unceasingly. He lifted a post, carried it, laid it down at the future place of the house. He came back, lifted another one, carried it, and laid it down at the construction site. He came back again. Finally, only one post was left. He lifted it, carried it, and went ahead. We followed him: "You come behind. I'll carry the post ahead."

He arrived in the old house first and was sitting there. We went behind and also arrived. We rested. We were just sitting together. In the afternoon my mother boiled water. The water boiled. She stirred sago in. The sago is ready. She portioned it and cut it into pieces on leaves. Then she cooked *tulip*-vegetables with mushrooms. She turned vegetables and mushrooms over. They are getting done, they are done. She took the pot off the fire and set it on the floor. It has to cool first. It is still hot. Now it has cooled down. She distributed the food on plates. She gave one plate to my father, gave one to me, and gave one to my brother. She also ate. We were eating vegetables and mushrooms with sago. The food is eaten up. We have finished all of it. We were sitting and resting. The dusk makes its noises. The night comes. Soon it is completely dark. My father left. He went to the men's house and slept there. I myself slept with mother and brother. We

were fast asleep, fast asleep. Then the birds sang, all of them sang. Dawn comes in. Daylight rises. The darkness is over. It is morning.

My father came to the construction site. He dug a hole. He dug holes for the posts. He erected the posts. Two he erected in the middle, two at the back, two at the front. Now they are erected. Horizontally he laid along the supporting beams over the posts. They are put in position. He tied them together with rope. Many of them need to be tied together. He tied together all the supporting beams of the house with rope. He placed the crossbeams and tied them together with rope. They are all tied together. He tied the roof joints together with rope. They are tied together. Then he placed the floor planks on the supporting beams. He tied together the floor planks of the house with rope. They are tied together. He made the sago thatches. They are sown. He placed the sago thatches on top of the roof beams and tied everything together going up to the roof ridge. Then half of the roof is finished. The dusk sounds. The night falls in. The night is over. The dawn has approached. He made the other half of the roof. He made all the sago thatches for the other side. They are made. Then he fenced the walls. He fenced the walls together with many other people. Quite some people helped him. Now the walls are finished.

The fireplace is left to be made. He put a palm mat on the floor and fetched soil. He put the soil on the palm mat and trampled it with his feet. He poured down a little water and smoothed out the soil on the fireplace with a stick. Now the fireplace gets hard. Well, the fireplace is ready for use. Finally he made the door, one opening only. He cut out a hole. Other openings he didn't cut out. He had fenced all the sides of the house. There was only a hole towards one side of the house for the smoke to go, the smoke outlet of the house. The smoke goes out that way, namely through the smoke outlet of the house. Then he fastened bolts on the door. Nobody can open the door at night. A sorcerer cannot open it. At last he made the ladder. He tied it together with rope. The ladder is ready and one can enter the house properly. The next day we spent like this: We placed several boards on the walls. Then we took down our belongings from the old house and carried them to the new house. All the belongings: the bush knives, the axe, the pots, the baskets, the sago flour, everything. From now on we stayed in the new house. My father took a good rest. He rested for a long time. He rested for a full month.

## C.5 Ono basuiko

### Introduction

The story *Ono basuiko* ‘A man has died’ is told by Margaret Osi in Ossima village in February 2007. The story is about a brother’s death and the ritual treatment of his body.

### Summary & background

The bodies of the deceased were placed on a mortuary platform in a tree and burned with a fire below the platform until only the bones remained. This story is not the only Kilmeri source for this procedure. During a visit to the village of Awol, the local consultants also spoke of this tradition, which had only recently disappeared.

This method of treating corpses is widespread. It has also been documented for the Simog and Daonda people, who both speak a language of the Border family, south of the Bewani Mountains (Seiler 1985: 223). The bones of the deceased are preserved and are supposed to transfer the power of his or her spirit to the living. They are usually carried in a (special?) net bag and are part of the hunting gear when a close relative of the deceased goes hunting (see Sequence (12)). This bone-related custom has also been reported for the Telefomin people, who live on the upper reaches of the Sepik (Craig 2018).

The conceptual difference between the traditional and the Christian way of burying the dead seems to be as follows: In the past, the dead were placed in a tree, whereas today they are enclosed in a coffin and placed in the ground. A tree might symbolise openness, while a coffin covered with earth symbolises the locking up of the dead. This may mean that it is believed that the spirits of the dead are no longer able to help the living.

Then the younger brother also shot a boar. The families stayed on in the bush. But the younger brother became sick. For five days already he was very sick. So the older brother thought: “My brother is seriously ill. What am I going to do now? What should I do?” He looked at him and thought: “This one will die soon.” After five more nights the younger brother dies. He died. He is dead.

The older brother cried. His tears fell down, and he sighed: “What am I going to do now?” He built a platform up in a tree. He put a grid of planks up in the tree. Then he said to his brother’s wife: “Now let’s wrap your husband in a bark mat and put him up with the mat around his body.” They tied the mat with a rope and put the body on the grid. Then they lit a fire. After lighting it, the blazing fire was burning the body. He said to his younger brother’s wife: “We’ll take ourselves to the village.” To his brother’s spirit he called out: “I take your children and your wife back to the village. You follow me later!” Crying they reached the village and were asked: “What did you do? How are you?” “My younger brother has died. I left his body in the bush, near the bush house. I put it on a grid. We had wrapped a bark mat around it.”

The brother tended the fire. He was tending the fire for a long time. The older brother went off to light the fire anew when it had extinguished.

C Old village life

wono layeko, midorilayeko. Mi yilauyo pulo. Nakero, due an dupua dor dupua. Makina amanikiipe. Mi boyo lo. Am due lakoipe. Klapno miriyeko. Par mi-nepeipana. Diri kep banikiko. Ko ro riyo. Mi ko ro pulo. Ko epemna pulo. Bi ko lipelou, mi ko ar lu."

Tending the fire kept him busy. The younger brother's corpse has already dried like meat. When the older brother had come there again one day, he took off the bark mat and looked: not yet. The corpse was still smelling. He wrapped him with the rope again and put him up in the tree. He put him back on the lattice again. Then he returned to the village. He stays there for twenty days. Well, before that the corpse would still smell. Later he went again, yet he counted the days first. When he had come, he glanced at the corpse again. He took off the bark mat. His brother had smelled. But now there isn't any smell left. There were only the bones, together with the skull and with the jaw bone. Having gathered the bones, he put them in a basket and carried them to the village. He arrived in the village. He brought the bones into his house. There he hung them up over the place, where he slept.

Sorcerers might come to disturb the older brother's family. Then the younger brother's spirit warns his older brother: "You must not sleep! The sorcerers come here. Wake up, stay awake and watch out." So he put the kneecap into his netbag. He took only one bone. During the day he walks around with the netbag. He walks along a path. First he walks along the bush track. Then he branches off in the undergrowth and walks through the undergrowth. Later he looks at his

netbag: “My netbag is shaking. Sorcerers are coming. I’ll hang it over my shoulder.” He chose another route. He went through the undergrowth back to the village, arrived there and said to his wife: “My netbag shook, I saw this. I came back here. I walked fast. A pig I sought in vain, again I did not shoot anything.”

## C.6 *Urual*

### Introduction

The story *Urual* ‘The big lizard’ was told by Andrew Wapi without recording it. It was later renarrated jointly by Susan Bisam and Margaret Osi in Ossima village in August 2004.

### Summary & background

This is a hunting story. Two brothers went hunting, but one of them was fatally wounded by the bite of a dangerous lizard. *Urual* refers to *Varanus salvadorii*, the “Papuan monitor lizard” from the Varanidae family, which is endemic to New Guinea (see comment on Text B.2). The story tells us that this animal was previously hunted for its meat. I assume that Andrew Wapi witnessed such hunting activities when he was young. The final sequence states that these lizards were common in the lowland forests and gives advice on how to kill them.

In this story, the deceased is buried in the ground, but without a coffin. The wake he received is a traditional custom. This part of the ritual after a death in the village is missing in Text C.5 above. The reason for this could be that the man in question died in the bush and was not transferred to the village before the cremation ritual took place. I was told that such cremations never took place near settlements, but some distance away in the bush.

### Parallel text

row. Six arrows altogether. Now the arrows are finished. The big lizard bit the man's hand. Then it bit his neck. It cut the man's neck. Its teeth are very long, like a saber. The man died above in the tree. He is dead. The lizard jumped onto another branch of the tree and was sitting there.

The younger brother twined up a liana and took it up the tree. Then he carried the older brother down to the ground by means of the liana-sling. He brought him to the village. The people there asked him: "What happened to your older brother?" "A huge lizard bit him. He died. He is dead." He carried him to the house. Inside the house they held a wake for the dead man. One night the people held the wake, until dawn. Then they dug a hole, carried the corpse to the hole, and threw it inside. They covered the hole. Having covered the hole the people went off to cut the tree, where the goanna had been. They cut the tree, and it fell over to the ground along with the goanna. After attacking the lizard with arrows they beat its neck with sticks. Finally it is dead. Having cut wood they lit a fire. Then they were cutting up the flesh of the huge lizard. After cutting it in pieces, they put it on the fire. It is done. They took the pieces off the fire with bamboo tongs. The people ate the meat of the lizard. They were expected to share it among themselves. They ate the lizard's meat with sago.

*Bo kuru.*

## C.7 Diri wor dop lo

### Introduction

The story *Diri wor dop lo* ‘The younger brother changes into a dog’ was told by Andrew Wapi in Ossima village in September 2000.

### Summary & background

This hunting story is about a supernatural power that enables the younger of the two brothers to change his appearance. He transformed into a dog and behaved like a hunting dog. In this way, he managed to secure two tree kangaroos as prey. The older brother did not notice the younger brother’s transformation (see Sequence (12)). He only became aware of it later in Sequence (22). After the hunt, the younger brother miraculously regains his human form. The story is set at a bush camp, and such camps are usually established in the deep forest for a few days in order to procure new food supplies. Therefore, the younger brother did not enter the main village in his changed appearance.

Dogs are indispensable for hunting marsupials. Hunters knock or shoot them down from trees and the dogs catch them on the ground (cf. Brumbaugh 1984: 135-138).

Andrew Wapi’s text contains some code-switching to Tok Pisin. Notably, we find Tok Pisin combined with the Kilmeri light verb *pi*, for example *kamap-pi* ‘become’, *tanim-pi* and *senis-pi*, both ‘change’. An example is Sequence (31). Even though the change of appearance is a narrative topos and an established concept in the Kilmeri tradition, there does not seem to be a verb with this meaning. In the story *Wapues* (Text A.5) in Sequence (31), the phrase *dop kep pûke* ‘lose his skin’ is used, but it is followed by Tok Pisin *kamap-pi* and *senis-pi*. In the story *Kusudua* (Text B.5) in Sequence (22), the expression *dop kep poname* ‘give his skin to sb’ occurs, again followed by *senis-pi*. For the Tok Pisin verb *lukautim* ‘take care of’ there is a clear equivalent in Kilmeri, viz., *yai* ‘take care of’. At the same time, the speaker uses Kilmeri serial verbs when necessary, for example in Sequences (6), (8), (14), (26), (29), and (30), and thus exhibits good language competence.

Another comment concerns the narrator’s style. The text is characterised by a lot of repetition. For example, the fact that the younger brother has turned into a dog is repeated several times. The catching and killing of the tree kangaroos is also repeated several times with almost the same wording. As a result, the text is not a fluid narrative. Instead, the narrator appears to constantly reassure himself about the plot.

**Parallel text**

*Diri eweno ki kama inakap yilau kepyo. Yilau kepyo yana inakap. Diri ewe ako wonakap yilauyo. Ewe kepro busyo lo. Duyo klapno ewe wor duyoy ukeli. Wor aska. Wor ba ukeli. Ki kama lo. Wor aska. The older and the younger brother stayed alone at their place. They were staying at the place where they had built their bush camp. The younger brother was staying with the older brother's wife at the bush camp. His older brother went off into the bush. When leaving for the deep bush the older brother took dogs with him into the bush. No, there were no dogs. He didn't take any dogs. He went alone. There were no dogs. Looking up he had seen tree kangaroos, two of them. Then, having come back to the camp, he said to his younger brother: "I have seen tree kangaroos. Come, let us go! We'll climb up the tree for the kangaroos, they are sitting above."

They went to the tree. There were no dogs with them. Only they. They are alone. Having come to the tree, the older brother said to his younger brother: "Stay down here! I'll climb for the tree kangaroos. You stay on the ground." Now the younger brother changed into a dog. He behaved like a hunting dog. The older brother thought: "My younger brother is a human being. But now his body looks like that of a dog. He became dog-like." The older brother climbed high up after the kangaroos. There he pushed them down from the tree by shooting arrows at them. The younger brother ran here. His skin had changed. He had become a dog. The older brother had climbed high up after the tree kan-

*Ewe riyo kûnoro muelno: "Eh bipuel?" "Ko bawiyewoko." "De ke dop elep asa senisimpo?" "Ko mi worso po. Ko so mi bipuel yala dele. Mi dupua ko roki wiyowe." "Eli mi ko makina ya. Nuko ile yipyo." Yipyo welppuo. Kupuen-poipno ako muelno: "Diri kopi ke wor dop lo. Wor dop ki loro. Bipuel dupua oki wiyowe. Yala nuko asa poi? Diri kopi wor dop lo. Diri kopi klokniro. Ya yala nuko wilno suelnei. Kimike nuko rupueno suelwilneip. Pastaim rupueno suelwiliponoip. Yala ke mi wilno suelnei. Nuko yaii. Nuko makina yaii. Nuko makina lukautimpoi. Diri kopi ke wor dop lo. Nuko makina lukautimpoi."*

garoos. The two tree kangaroos must have jumped onto another branch. The younger brother had become dog-like. So he could grab the two tree kangaroos and killed them. The two tree kangaroos jumped and fell on the ground. He killed them both, a male one und a female one. He caught the two tree kangaroos. The younger brother was still a dog.

The older brother climbed down from the tree and said to him: "Eh, what about the kangaroos?" "I have killed them both." "And what about you? How did you change your own skin?" "I became a dog. I thought, otherwise the kangaroos will certainly escape. Yes, the two ones, I killed them here." "You really took great care of me. Let's go back to the house." He carried the dead tree kangaroos up to the bush hut. While cutting the meat together, he said to his wife: "My younger brother changed into a dog. Yes, he became a dog. He grabbed the two tree kangaroos. But what are we going to do now? My brother changed into a dog, my only younger brother. Now we'll cut him the sago pudding on a plate. Before we brought it to him cut into a leaf. In the past, well, we served him the sago in a leaf. Now we cut it into a dish for him. We take care of him. We take great care. We always took great care. My younger brother changed into a dog. We took great care of him."

*Boyopuno riyo nakero. Diri miro nakero. Mi kimike ki so nakapno. Mi ono dop kamappo. “Yalaka ko mi bakamappoko onona. Pastaim ko worso kamappo.”*

Later he stays there. The younger brother stays with the older brother and his wife. While first staying as a dog, he then became human again. (Finally the younger brother said to the others:) “From now on I have become man-like again. Before I had changed into a dog.”

*Em tasol tenk yu.*

That’s it. Thank you.

## D Procedural texts

The following procedural texts are concerned with items of the material culture of the Kilmeri people. The production of sago and the manufacture of oil and brooms continue as described in Texts D.4, D.6, and D.8. However, there is another tradition that continues to this day, namely the manufacture of net bags, or bilums, as they are commonly known across Papua New Guinea. Many women wanted to make and sell me a net bag in order to receive some money. They almost competed to see who would come up with the most beautiful design. The only difference from the past is that nowadays the women use acrylic wool, which they buy in a supermarket in Vanimo. Traditionally, they dyed the natural bark fibers in a lye solution, the dye being extracted from the bark of certain trees (cf. Text D.3).

Figure D.1: Kini and Regina with almost finished bilums

## D.1 Pper papi

### Introduction

The text *Pper papi* ‘Making penis gourds’ (i.e., phallocrypts) was narrated by Margaret Osi in Ossima village in February 2007.

### Summary & background

Until at least 1961, the year the Ossima Mission was founded, and possibly much longer, men covered their penises with a decorated gourd. According to what Margaret Osi told me, the men used small egg-shaped gourds for this purpose. This type of phallocrypt is widespread in the Sepik, the Border Mountains and the Bewani Mountains. Some specimens are now part of the anthropological collections of museums in Berlin, Leiden, Paris, and Adelaide. They were found in many settlements and language groups. It is interesting to mention a specimen found in Kilifas in the Fas/Momu language area.<sup>1</sup> The depicted carved decoration looks similar to those described by Margaret Osi and worn by her husband Lis Osi and her father Apai.

## D.2 Die papi

### Introduction

The text *Die papi* 'Making grass skirts.' was narrated by Margaret Osi in Ossima village in February 2007.

### Summary & background

In her youth, Margaret Osi lived a traditional life. Making grass skirts was an important personal task for every woman and seemed to take up a lot of time. The skirts were worn day and night and did not last long. Apparently Margaret did not particularly enjoy the labour of making grass skirts. Only at the end of the report does she say which types of sago palms are most suitable and produce skirts that do not break so quickly. In other areas of New Guinea, grass skirts are made from real grass and not from the fibres of sago palm fronds.

Unfortunately, I could not witness the making of grass skirts. No woman makes them these days. So Margaret Osi's description remained somewhat theoretical for me. But photos show that grass skirts were densely woven from numerous individual, very thin strips of grass or fibre. Apparently they would start with the front, which covered the belly, and then continue with the back side (Sequence 3).

### Parallel text

*Ko puer sûni bese puer. Ko die sûni. Ko die puer nopi. Ko die wiyi. Ko die wiyi pueryo powole. Elka pono kipika po. Ko bapok. Ko malapi. Ko waye, upuna. Ko upuna po. I roll a thread, a *tulip*-thread. I roll the grass skirt. I produce a thread for the grass skirt. I string the grass skirt. I string stripes for the grass skirt on the thread, going on and on. After doing it along the belly, I did it along the back. I have done it. I measure. I try, alright, I did it well. I wrap it around my body. The grass skirt goes along the belly, and I join it with the back part. I do it along the back. Then I hide the knot at the front. I have wrapped it, and it stays on my body. I walk around wrapped up in the grass skirt.

## D.3 Die aeppu pi

### Introduction

The text *Die aeppu pi* “Dyeing grass skirts” was narrated by Margaret Osi in Ossima village in September 2004.

### Summary & background

The leaves of the tree contain a substance that is used as red colouring. Unfortunately, I was unable to identify these trees botanically. But Fyfe & Bolton (2011) offers a good description of dyeing techniques in the Upper Sepik and provides identifications of some of the species used to dye string bag threads.

Whenever possible, materials were dyed with plants found in the forest. The dyeing of grass skirts took one day, including preparation and the drying process. Apparently, the skirts were left in the colouring solution for about six hours. The colour must have been non-fading.

Naturally, the women did not go into the deep bush alone, they accompanied their husbands. While the men went hunting, the women would search for the plants they needed.

I seek a *wies*-tree, deep in the bush. The *wies*-trees are quite hidden. I look around: Where does one stand now? Here stands a *wies*-tree! I collect leaves of the tree. They are collected. I carry them to the house. I cook the *wies*-leaves in one big pot for dying the grass skirts in the liquid. I put the grass skirts into the pot, so the grass skirts will become red now. More people, the women, bring their grass skirts and put them into the *wies*-leach. In the afternoon they take out the grass skirts and bring them to their houses. There they dry the grass skirts in the sun. Now my grass skirts are red.

## D.4 Ko oil pi

### Introduction

The procedural text *Ko oil pi* ‘I make oil’ was narrated by Margaret Osi in Ossima village in September 2004.

### Summary & background

Small-scale private production of coconut oil is very common in Kilmeri villages. Margaret Osi used to do this frequently. The oil is usually produced for personal use. Sometimes a surplus is sold on the local market. But nowadays, home-made coconut oil no longer meets people’s needs, so they buy the oil from Vanimo supermarkets. Note that coconut oil is different from palm oil, which is produced in large plantations. Recently, one such plantation was established near Ossima (see Section 1.1.2 above).

Interestingly, there is no vernacular word for oil in the Kilmeri language.

### Parallel text

*Ko oil pi sekena aeuna. Aeu ko ino pi boyo. Ba sekena ba aeuna. Ko suo rapiye, yuki. Ko oil pi. Ko suo sekapi, suo yani ipiyo. Ko disyo pokûne emna. Mi yala ko apoyo pi. Ko sûyo yowe, sû mappane. I make oil for the hair and for sago pancakes. Sago pancakes I make with it later. Some for the hair, some for sago pancakes. I fetch coconuts and shred them. I make oil. I press the copra and knead it in a pot with some water. Then I pour the liquid in a dish for further use tomorrow. The next morning I process the copra liquid in a pan. I light a fire and heat it on the fire. The flame of the fire blazes up. I let the copra milk boil. The milky liquid boils away. The oil is made. I take it off the fire and put it aside. The oil has to cool down first. Now it is cool. I bottle it with a spoon. I pour it into a bottle. It’s good oil. When I made a lot of oil, I offer it on the market for selling. In case I didn’t make a lot, but only a little, I bake sago pancakes with

it. I don't offer it on the market, it is too little. In case it's only one bottle, I don't offer it for selling. I make sago pancakes with it.

## D.5 *Yaup ulyo moli*

### Introduction

The procedural text *Yaup ulyo moli* ‘Boiling water in bamboo tubes’ was narrated by Margaret Osi in Ossima village in February 2007.

### Summary & background

When my older consultants were young, their lives were based on materials that were largely provided by the natural environment. For example, the women did not use metal pots for cooking, but roasted food over the fire (bananas, bread-fruit) or used vessels that they could make from bush materials. One type of such vessels used for cooking are bamboo tubes. Bamboo trunks are naturally segmented. If you cut off a long trunk, you get several tubes with a base and an opening. Such a tube served as a kind of pot. Because of the small diameter, several such tubes were needed to prepare a single meal. The tubes also needed a firm base. This meant using suitable timber to build a kind of grid in which the tubes could stand upright. Note that bamboo is quite fire-resistant (See also Text A.1, Sequence 31 and Text A.9, Sequence 7).

I cut bamboo. I cut firewood and brought it to the house together with the bamboo. I put everything together. I put some pieces of wood vertically, some I laid horizontally. I filled up the water into the bamboo tubes. I put the bamboo tubes side by side in the fire. I lit the fire. I took sago in a dish. The water boiled. The water in the bamboo tubes boiled well. Now I poured the water from the bamboo into the dish. I gently tossed the sago in the dish. If I toss the sago heavily, the sago is likely to spill over. Then the sago is like water. I take away the sago crumbs, the black crumbs that are in the sago. I took the bamboo

*Pu ulyo noriyo. Mi ko bese si. Bese kisipno mi ko sûyo wolana ul isiye. Sûyo rap komolipno bese ro. Baroko. Ko puliyo ul roise. Ul ko neppino rino kiso. Ko kiseipno wilyo unepako. Ko yano ni. Ko bakesiyoko, kuru.*

with the water and poured it down on the sago. I count four tubes. I pour them down on the sago. The sago jelly gets ready. It is ready. I cut it into pieces on leaves.

I filled again water into the bamboo tubes. Now I cook the *tulip*-vegetables. Having cooked the *tulip*-vegetables, I boil more water. Again I fill bamboo tubes and put them on the fire. The *rap*-vegetable on the fire boiled, the *tulip*-vegetable also got done. The vegetables are done. I took them off the fire together with the bamboo. I split the bamboo tubes lengthwise with the bush knife or with a stick. After splitting it I poured the vegetables into the dish. I eat them with sago. I have eaten up everything, and (the meal is) finished.

## D.6 *Kos papi*

### Introduction

The procedural text *Kos papi* ‘Making a broom’ was narrated by Margaret Osi in Ossima village in February 2007.

Figure D.4: Rose Osi making a broom

### Summary & background

Margaret Osi comments on her granddaughter Imelda, who is sitting in an oil palm directly opposite the window of my house. Making brooms from palm material is still very common. Imelda cuts the palm fronds as raw material for the broom. The outer layer with the leaves has to be scraped off. Then the inner, tendon-like strips remain, which are tied together. The broom is then ready for use.

### Parallel text

*Imelda numu rileyo nake. Numu kweyo eku nake. Kos sueli, kos papi. Kili klokniyo nake. Boyopuno numu kopue-*

Imelda is sitting above in a *numu*-palm. She is sitting on a palm rib to cut the raw material for making

## D.7 *Yûr lui*

### Introduction

The procedural text *Yûr lui* ‘Shooting birds’ was narrated by Margaret Osi in Ossima village in August 2004.

### Summary & background

Traditionally, birds are hunted with bow and arrow. This is a fairly silent way to kill them. Sometimes a shotgun is also used, as in the case of Lis Osi, Margaret’s husband. In her report, Margaret switches to the first-person perspective and tells us that she herself is the hunter. Normally, women would not hunt for birds or game.

Note that the same vocabulary is used for rifle shooting as for traditional hunting. The bow is equivalent to the rifle, and the arrows are equivalent to the cartridges. The verb *pulapi* ‘to draw a bow’ means ‘to load and aim with a rifle’ in the modern context.

### Parallel text

My husband shot crowned pigeons with a gun, hornbills also. With the gun he hunted them efficiently. If the bird sits on a branch close by, if the bird sits there, I nock an arrow. Then I draw the bow and shoot. The bird falls, the bird has fallen down. It lies on the ground. I pick the bird up. If the bird sits on a tree branch far away, if it sits aloft, I aim a gun. I put the cartridge inside and aim the rifle at it.

## D.8 *Due dû papi*

### Introduction

The procedural text *Due dû papi* 'Processing sago' was narrated by Susan Bisam in Ossima village in December 1999.

Figure D.5: Three sacks of sago flour in a storeroom (village of Airu)

### Summary & background

Right at the beginning of my field research, Susan Bisam was eager to describe the process of sago production to me, starting from cutting down the sago palm to mixing the sago pudding for consumption. Here she lists the activities and steps without explaining them in much detail. Susan spent most of her time processing sago for the family and also to sell in Vanimo if there was a means of transport to town. She was a strong woman and was capable of felling a fully grown sago palm by herself. The fibres of the palm bark are so hard that they were referred to with the word *re* meaning 'feather'. They are also similar in shape.

Susan's Kilmeri is very basic, but it contains the essential vocabulary.

A female cousin of Susan Bisam told her the following little story about pigs eating sago during night time, which Susan re-narrated in Tok Pisin in December 1999. It is included here because it adds a certain flavour to the processing of sago.

## D Procedural texts

*Pik man ol kaikai saksak. Em tokim pik meri: "Yu kam nau. Yumi go nau. Em i tulait nau. Man bai kam, em bai sutim liklik pikinini pik."*

All the pigs eat sago. Once, a male pig said to its wife: "Come on, let's go. It's becoming morning. The humans will come, and they will shoot the little piglets."

*Em tokim pik meri: "Ol i sutim pikinini pik bilong yu pinis. Yu ken krai i stap. Wari stap bilong pikinini bilong yu. Ol i karim pikinini bilong yu na kaikai. Mi tokim yu: 'Yumi go nau. Yumi mas hait long haus bilong yumi.' Yu no harim tok bilong mi. Yu sakim tok."*

Later on the male pig said to its wife: "Now they have shot our young ones. Now you are crying. Your little ones weren't lucky. They took the little ones and ate them. I told you: 'Let's go. We must hide in our place.' But you didn't listen to my words. You were disobedient."

## D.9 Female fertility

### Introduction

This procedural text contains some remarks regarding female fertility. It was prompted by me. I wanted to get some information about the possibility of preventing pregnancy. It was narrated by Margaret Osi in Ossima village in August 2004.

### Summary & background

The text describes a contraceptive method (Sequences 1 and 2), which is similar to using a vaginal diaphragm. The husband must not know that the wife wishes to avoid a pregnancy. The text also mentions a method for becoming pregnant (Sequences 3 and 4). Unfortunately, I was unable to botanically identify the tree, which is said to enhance fertility. Finally, the text speaks of miscarriages (Sequences 5 and 6), after which the fetus was buried in the ground.

In the past, women had to sleep in a special small hut called *pol yip* in Kilmeri during their menstruation. Menstrual blood was collected from a hole in the ground.

### Parallel text

*Seke suo roise yasiye. Seke bopyo pane, luoro roise lole. Ko komiyewep. Uki kep yala ar riyei.*

I insert hair and coconut together. I put the hair into a shell and glue it together with breadfruit sap. I would hide the diaphragm well. A woman's husband will not see it.

*Ko ri pul piyeke, wepule. Ko ako suel ino pine. Aeune mi yala ar pi. Lil mupiye. Yala ruri pi.*

I go take the liquid of a certain tree and bring it home. Then I mix it with the wife's tobacco. Then the menstruation doesn't come. The blood is blocked. Now there will be a child.

*Ruri elyo sui, ppul seki. Ruri ppul seki. Maki ari. Bi rarip, wilikûpi biyo. Bi sowe.*

If the child dies in the belly, the fetus falls out. The fetal child falls out. This is not good. The women would dig a hole and bring the fetus here in the hole. Then they cover the hole.

# E Autobiographic texts

## E.1 Margaret Osi I

### Introduction

This is the first and shortest version of Margaret Osi's life story. She told it in Ossima village in November 1999.

### Summary & background

Margaret Osi told me this first version of her life story in the earliest days of fieldwork. It is very short and linguistically most simple, but contains the most important steps of her life (cf. Gerstner-Link 2018: 926-927). The sequence of short clauses perfectly presents the basic SOV word order of Kilmeri.

## E.2 Margaret Osi II

### Introduction

This is the second version of Margaret Osi's life story that she told to me in Ossima village in January 2000.

### Summary & background

Margaret herself entitled this account of her life with Tok Pisin *Laip stori bilong man bilong mi taim em i dai* ('Life story of my husband when he died'). This suggests that the story is about her husband's last days. In fact, however, it centres on the difficulties she faced after his death. This recollection of Margaret's way of life after her husband's death ties in with her first short version above (Text E.1). This second part of her narrative is very repetitive and shows the great emotional and economic tumult of living as a widow.

The text exhibits some code-switching. The following nine words are all Tok Pisin: *kaikai* 'food', *famili* 'family', *baimpi* 'to buy', *maket* 'market', *moni* 'money', *rais* 'rice', *sop* 'soap', *omo* 'detergent' (a brand name for the type of product), *painimpi* 'to look for', *na* 'and'. In the text, Tok Pisin verbs alternate with their Kilmeri equivalents. The same goes for Tok Pisin *kaikai* 'food' likewise. There are four nouns which do not have Kilmeri equivalents: *famili*, *maket*, *sop*, and *omo* and should be considered true loanwords. The grammar in which these Tok Pisin words are embedded is strictly Kilmeri.

### Parallel text

 ‘I live in my own house. I live only like this. There is no other house (for me to live in).’<sup>4</sup>

<sup>2</sup>The sentential negation *ari* ‘no’ refers to Margaret’s former way of life with her husband who died several years ago.

<sup>3</sup>In this clause, O follows V as in Tok Pisin.

<sup>4</sup>Old parents usually prefer to live in the household of one of their children to secure their livelihood.

(16) *Klokni solo ko riyo nake.*

klokni solo ko ri-yo     nake kuru         bo     kuru  
one     only I     DIST-LOC sit     be.finished story be.finished

‘One (person) only I live there, that’s it. The story is finished.’<sup>5</sup>

---

<sup>5</sup>The concluding formula *kuru* is partially integrated into Margaret’s reasoning of being all alone. Her situation won’t change anymore. Therefore it is taken here as part of the last sentence of the story.

### **E.3 Susan Bisam**

#### **Introduction**

This autobiographical text was told by Susam Bisam in Ossima village in December 1999.

#### **Summary & background**

This is a short account of Susan's life, beginning with her marriage to a man from the Sepik. She focuses on the things her husband was doing without mentioning anything about her own daily activities. Nevertheless, she may have beaten the drum, as the final sequence might seem to indicate. The crocodile carvings on the slit drum (Sequence 7) show that the crocodile is an essential feature of Sepik culture.

Susan also told her life story in Tok Pisin. This version is longer and talks about the rush on crocodile skins in the area that eventually led to her marrying a man from Angoram (Lower Sepik). Note that Susan tells the story in the third person. The Tok Pisin text is not glossed, but is presented as a parallel text with an English translation below:

*Wanpela de pukpuk i bin kilim wanpela man bilong Ossima. Stori bilong dispela man pukpuk i bin kilim i go olgeta long Sepik. Olsem planti man bilong Sepik i kam long wara Puwani bikos ol i laik kilim pukpuk na salim skin bilong pukpuk. Wanpela man namel long ol dispela man em Arnold. Sampela man namel long ol dispela man i stap long haus bilong Margaret. Susan i stap long haus bilong Margaret tu. Margaret em i anti bilong Susan. Olsem Susan i bungim man bilong en. Tupela i marit. Arnold i painim pukpuk olgeta de. Bihain kilim olgeta pukpuk ol i kisim skin. Skin bilong pukpuk em wait na gre na blak. Skin bilong pukpuk i nogat nil, rat tasol. Taim*

One day a crocodile killed a man from Ossima village. This story found its way as far as to the Sepik. So many men from the Sepik came to the Puwani river because they wanted to catch crocodiles and sell their skins. Among them was Arnold. One of the crocodile hunters stayed in Margaret's house. Susan lived there, too. Margaret is a close relative of Susan. That's the way Susan met her husband. The two married. Arnold went hunting crocodiles all the days. They killed the crocodiles and took their skins. The skins were white, grey, and black. The skins had no spikes, only a few rat bites. Later on, when all the crocodiles in the Puwani were caught,

*ol pukpuk i dai pinis long hia em i go long Amanab. Bihain long Imonda, Utai, Wasengla. Bihain tupela i go bek long Sepik. Long ples Angoram Arnold i bin mekim bikipela haus bilong famili bilong en. Haus bilong ol i stap arere long wara Sepik. Arnold i mekim planti kanu. Arnold i mekim planti garamut tu. Susan i gat bikipela gaden long Sepik. Em i planim kaukau, banana, pinat, melen, yam na mami.*

the hunters went on to Amanab. Then they went on to Imonda, Utai, and Wasengla. After the crocodile rush Susan and Arnold went back to the Sepik. In Angoram Arnold built a big house for his family. The house stood close to the Sepik river. Arnold built canoes. He also made many *garamut*-drums. Susan got a big garden along the banks of the river. She planted sweet potatoes, bananas, peanuts, melons, yams, and cassava.

### Parallel text

*Ko uki Sepik uki piyo. Ko yilau kepyo lo. Ko yip ikoiyo nake pu epiyo. Uki kopi yip po. Uki kopi kanu po, kanu kiniyo po. Uki kopi pul po, kanu pul po. Uki kopi garamut po. Urai po garamutyo. Ko garamut kowe, yena kiniyo pulupi.*

I took a husband from the Sepik. I went to his place. There I lived in a big house at the edge of the river. My husband had built the house. My husband made canoes, many canoes he made. He also made paddles for the canoes. My husband made slit drums. He decorated them with crocodiles. When I beat the slit drum, all the people came.

## E.4 Andrew Wapi

### Introduction

This autobiographical text was told by Andrew Wapi in Ossima village in February 2000.

### Summary & background

At my request, Andrew Wapi recounted his life from the beginning to the present day in 2000, during which time he lost three relatives: both his parents and his first wife. In 2001, his second son Vincent died. When naming his children, Andrew Wapi first lists the indigenous name and then adds the Christian name. For him, the indigenous names are the real names, the others are just modern additions.

The following report of Andrew Wapi's life contains quite some Tok Pisin vocabulary. Some of this is found with other speakers, for example *laip stori* 'story of one's life', *storimpi* 'to tell', *nem* 'name', *taim* 'when', *karimpi* 'to beget'. Additionally, Andrew uses *lukautimpi* 'to take care of', *pinispi* 'to finish', and *bilong mi* 'of me'.

The word *yilewi* 'place' – which I have only heard in this report – is possibly related to I'saka *i* 'village' and/or *wéi* 'house'. The emphatic suffix *-ya* is also of I'saka origin (cf. Table 1.1 above).

Also noteworthy is the frequent use of Kilmeri *boyo* 'later'. Here it functions almost as a coordinator for 'and then'. Note also the metaphorical use of *pue* 'go' in Sequence 11, which is used to indicate the passing of time (cf. Gerstner-Link 2018: 950-953).

## E.5 Margaret Osi III

### Introduction

In this autobiographical text, Margaret Osi tells the full story of her life up until the year 2004. It was told in Ossima village in August 2004.

### Summary & background

Margaret's third autobiographical story begins with the year of her birth. This is followed by the years of her marriage, the birth of her first child and finally the year of her husband's death. In this way, she embeds her life in a modern way of reckoning time. Along with this kind of mental framing, she tells of her adolescent life in steps that correspond to those of girls and young women of the same age. The capacity of helping one's parents in daily life is a big step in growing up. It prepares young women for their future responsibilities after marriage. Margaret herself did not marry early. She mentions three times that she currently lives on her own (Sequences 5, 7 and 8). According to the dates, she must have been in her early twenties when she got married. Then she married a man who was much older and she became his second wife (Sequence 10). The husband was the head of the village at the time. He made all the decisions and arrangements for the Catholic mission in Ossima. Obviously there was some tension between the stepbrothers, i.e., the sons from the two wives, which I could witness myself. The fact that Margaret had usurped the position of Lis Osi's wife may have been one of the reasons why his firstborn son Paul Waia killed Margaret's son (Sequence 19). Margaret's own oldest (surviving) son David seemed to have a certain influence in the village by mediating disputes.

Margaret always admired the staff at the Mission. The head of the agricultural section of the Mission, Brother James Coucher CP, was a charismatic personality and was adored by all the villagers and the wider community. His esteem is apparent in Sequences 28-30. The private cattle business also continued after 'Brother Jim' had left Ossima. For example, I was able to buy a cow for Margaret from one of the cattle owners. Margaret was proud to be the owner of a cow and was happy when her cow became pregnant. She finishes her story with this fact.

me the cow.” My firstborn child, this one child died. If the firstborn child is good, then I will live fine in his company. If my daughter-in-law is good, I will live fine with her. If the daughter-in-law is bad, I won’t go on well with her. My first daughter-in-law, wife of my oldest son, didn’t want to give me food. She is greedy. My daughter-in-law Imelda doesn’t talk bad to me. She doesn’t look grimly. She is good-hearted.

I had my second child. I bore my son David Yau in Luppap. The other children are Charles Imop and Rafael Ppisi. All born in Luppap. Our big house was in Luppap. Our small house was in the bush, at Ouwin. The ancestors had named the hill. The ancestors named the hills, the swamps, and the water bodies. They counted them all by their names. The small lake Bilouppueki is filled up now. Its water was clear and good. We went to the bush place at Ouwin. We often came there. We housed some pigs, domesticated pigs, a boar and a sow. I looked after them. I planted coconut palms, *ral*-trees, bamboo and breadfruit I planted, mango and betel pepper, and in the swamp I planted sago palms. Paul Waia shot my pig. He shot Bipupi. Bipupi had nine piglets. I left the door open, and all pigs went outside the yard to find and eat worms. I searched for my pig. I searched in vain, nothing. Who had shot? I didn’t see the man. I heard only some gossip. The rumour came to me.

Ar mekiyo.*

My husband took his sons to the bush. He showed the bush to them. Here is yours, here is yours. They carefully acknowledged the bush slots. He showed his sons all the bush slots they will own after his death. One day a survey company came to the village. Many people were there. Then Jeffrey Osi, David Osi, Jerome Osi, Simon Tapi, and Joe Samou went to exploration places in the Sepik area together with the company staff. They worked for two years near Angoram. Then they returned to the village.

I got pregnant. I got pregnant with Grace, my only daughter. I was pregnant for nine months and then bore a baby. I see that she is a girl. Some people brought my child to Brother Jim. He looked at her. The pilot looked at her, too. "She has our skin!" Later the people brought her back to me. Josepin Bewa, a woman from Krisa, gave a name to her. She named her Grace. She grew up and went to school, to preschool. Helen, an American teacher, instructed her.

My husband died. He died in 1990, on Saturday, September 16th. Me, Imelda, and Charles were sitting in the house there. While my husband was busy with this and that, people spoke bad words about him. My husband wasn't sick. He was always fine. The people held a traditional wake for him. During the night they held the wake. Brother Jim wept and was very sad. "Now I won't stay any longer. I want

to leave. As long as you were here, my friend Lis, I was also staying in the village. Now I'll go." Jeffrey Osi is not articulate. Neither are his children. They aren't eloquent. They didn't help with the farm business either. Brother Jim went to Vanimoy. His farm business stagnated. Before everything was fine, when he was still there. But now it doesn't work. Back then Brother Jim was happy. The place was in a good condition, and there were no weeds. Now the weeds abound. Weeds cover everything densely. The cow fence is covered throughout by weeds. The weeds are a plague. *Luap*-trees rose everywhere, *lop*-trees rose everywhere as well as other trees. *Rur*-trees and Pandanus are numerous. All kinds of unwanted trees grew big all over the place. I myself live on in the village. Currently I live at my son David's place. In my house, Charles's wife is living now. My cow Ouwin is pregnant.

‘I live in the village. I live with my son. In my house, Charles’s wife lives there. My cow Ouwin is pregnant.’<sup>17</sup>

---

<sup>17</sup>Ouwin is the name of the place in the bush, where the family used to have a small house (see sequence 17 above). Domesticated animals used to and still bear a name of those bush places.

# F Contemporary village life

## F.1 Urai ikoiele

### Introduction

The story *Urai ikoiele* ‘The huge crocodile’ was told by Margaret Osi in Ossima village in April 2002. Her story was prompted by a report in the missionary news bulletin “PNG Passionists” (Willy 1996).

### Summary & background

This is a tragic story about river crocodiles attacking humans. The events described probably took place in the 1970s near Ossima, when there were still large crocodiles in the Puwani River. At that time, great caution was always required when crossing the river. An attack was always a possibility. The incident in question seemed to have thrown the whole village into a frenzy. After the crocodile’s attack, a thorough search was launched for the remains of the victim. Part of his body was found in the crocodile’s stomach. The remains of the man were later buried in a coffin like an intact corpse. This corresponds to the practice described in the crocodile bush spirit story (cf. Text B.8). From this we can conclude that it was crucial to guide the deceased, represented by the corpse (or at least some of its remains), into the world of spirits through an appropriate ritual, be it traditional or Christian. Only in this way could his good spirits protect the rest of the family (cf. Text C.5).

the husband came back to the bush hut. There he joined his wife and the children. They cut up the meat together, brought it to the house and cooked it in pots. After cooking it they took it off with bamboo tongs and put it into smoking containers. They lit the fire. The heat went up, and the meat dried. The following day the same. Then they returned to the village.

Husband and wife stood at the river. The husband took the wife's basket. Together with the big child he carried it across the river. They crossed the river over some logs. After that the husband left the older child and the dog there on the river bank. Then he crossed back, took his wife and the small child. They crossed the river jointly. He held the hand of his wife, and the small child was in the baby sling. When they had crossed and should just touch the river bank, suddenly a crocodile surfaced. The crocodile got hold of the man. The woman and the little child were carried away in the river current. The crocodile ate the husband, it gobbled him up. He was in the crocodile's belly. The mother shouted to the big child: "Go to the village and tell the people! I'm in the worst condition!" The boy reached the village and called for help: "My parents, my parents! My mother and sister are drowning in the river. My father got caught by a crocodile." "Oh, you are lying!"

"I don't lie, it's true! You come, you all come here." Somebody, who had come near, said: "I thought you were lying, but it's true." The boy replied: "I wasn't lying. I was telling the truth!"

All the people saw that the logs were broken, completely broken. The husband's older brother walked around crying. While walking along the river, the crocodile surfaced again. It showed its mouth to him and seemed to say: "I ate your brother." Now people came running and said to Father Ignatius: "A crocodile caught a man. His name is Iwei. His older brother is Bou. He walked around crying." Father Ignatius came. All the people were gathering beside the river. They stood at the river. The crocodile swam in the current. It floated under water. "Look carefully! Kou shot at the crocodile. Here the crocodile comes!" Bou sighed: "Oh Iwei! The crocodile showed you to me." The crocodile surfaced again. Father Ignatius said to the people: "Don't shoot at the belly! Shoot at the head! In the belly there is the man." The crocodile died. It is dead.

Many people helped together to pull the crocodile on the river bank. Father Ignatius said: "Cut slowly and carefully. The man is in the belly. The knives should cut into the soft belly." We all watched what people did. We watched with Father Ignatius. Suddenly Father Ignatius said: "Here is the head!" Having cut, they took the man's head out of the belly. Iwei's

head was in the crocodile's belly. They took it and put it on coconut palm fronds. They searched on. They took the limbs and put them also on the palm fronds. The same they did with two bones. One arm has disappeared, the bladder has disappeared, the testicles and the penis have disappeared. They aren't in the crocodiles belly. But where are they? We didn't see them anywhere. They put the man's remains into a small box. Having put them in, the people dug a hole. Then they carried the box to the hole, let it down into the hole, and covered it.

Some people ate the crocodile's flesh. Others didn't eat it, they tabooed it. Some people tabooed the crocodile's flesh. Later the people dug one more hole, a little bigger hole. They threw the remains of the crocodile into there. Then they covered the hole. Finally all the people went back to their houses.

## F.2 Bi dupua luwe

### Introduction

The story *Bi dupua luwe* 'He shot two animals' was told by Margaret Osi in Ossima village in March 2002.

### Summary & background

This is a memory of a hunt in the (late?) 1970s, when the Ossima Mission had already existed for nearly twenty years. The seventies and eighties were a cultural transition period from the old customs to the new way of life. Note that some of the meat was sold at the market in Vanimo. We can see that hunting had become a means of generating surpluses in addition to subsistence gardening.

My husband shot two animals. He shot a cassowary and a boar, two animals. We cut up the cassowary and put the flesh into baskets, Katlin and me. After filling the baskets with the meat we carried them to the river. We carried them to the sandy river bank. Then we turned back to the place, where my husband stayed with the boar. We reached the place.

With a *kanda-liana* I tied the front limbs of the pig together. Then I tied together the back limbs. I myself lifted the pig up all alone. I carried it to the river. We walked along the river. Then we were staying beside the river. Having made the smoking planks, we put the meat high up on the planks. I lit a fire near the meat planks. After lighting it under the meat planks, the heat went up to the planks. So the meat slowly dried. When the meat had dried up enough, we put it in bas-

kets. I had the cassowary cut up in two halves to share. I had also the boar cut up in two halves to share. Now we filled the baskets with the meat. My husband was only watching. Having finished with the meat we left for Vanimoyo, to the market. We sold the meat on the market. Having sold the meat, my husband and I returned together to the village. Katlin remained in Vanimoyo together with her husband.

## F.3 Bo Helenpiro

### Introduction

The story *Bo Helenpiro* ‘The story of Helen’ was told by Margaret Osi in Ossima village in January 2006. The old woman Helen died tragically in a fire.

### Summary & background

Helen Osi was the first wife of Lis Osi, the “modern mind” and leader of Ossima village. After his death she lived on for another ten years and received support from her second son Jeffrey Osi. Her first-born son Paul Waia had moved to Port Moresby. Helen passed away in 2005. In the last phase of her life she became frail and seemed to suffer from dementia. Helen often sat in an unfinished house where she kept her own fire and cooked for herself. But the fire that killed her occurred in her old house not far from her son’s family. She was buried in the garden of my house, and a coconut tree was planted. Note that Jeffrey Osi feels the need to state clearly that his mother’s death was a natural occurrence because of her age and the fire. He wants to cast aside thoughts of magic and superstition.

Helen fell over on the ground. She fell at the house. She fell on the cement floor. She hurt her hip. The joint tore. She dislocated her hip. Rafael and Cindy lifted her up. Rafael and Cindy helped her. Helen cried from pain. They laid her on the bed. Helen continued to cry from pain. Day and night she whimpered. It was hurting severely. She was in this condition for a long time, day and night. She couldn’t sleep. Her granddaughter Abaidja gave her food. Abaidja helped her all the time. Helen couldn’t stretch her legs. The sinews cramped in both knees. She often urinated. Large amounts of urine were spreading about like water. The urine stinks.

The urine had begun to stink. Abaidja alone was helping her. All the people neglected her. Helen was alone with Abaidja. They two slept together in one room.

Then Abaidja became sick. She was very sick. Helen's only daughter Sabeth didn't help her mother. She turned her back on her. Then I helped Helen. Theresia and I washed her things, and we washed Helen with soap. She was very dirty. She was in a pitiful state. Denis the nurse dressed her sores. So many worms on her legs! The worms covered the legs. There were ulcers on her behind. She was only whimpering from pain, day and night. Yessica put a lamp there. But Helen knocked it over with her foot towards herself. The mosquito net caught fire, her legs, her behind, and her hip caught fire. Only flames. Helen refused food, refused sago. Her mouth didn't make sounds any more. Her mouth is shut. Only the heart was still beating. Only the heart still continued to beat for a long time.

One night she died. People came and looked at her. Only the heart was still beating. I asked the heavenly Father and prayed to God: "Prepare the way for her, open the door for her, wash her with your blood. She shall be clean with your blood." Then she finally died. Her spirit went back to its home. It has gone. The people cried. For a while they were crying. Then the people surrounded Helen in their

traditional way. She died on a Saturday. Jeffrey, her second born son, was in Vanimo. Pius told Jeffrey via cell-phone: "Your mother has died. Come here!" And Jeffrey came to the village. David fixed the coffin for her. The people put her in the coffin. Other people were digging a hole. Having dug hole deep enough, the grave is ready.

Then they took Helen down into the coffin and put it inside the hole. The people carried her in the coffin and threw the coffin down into the grave. They covered the grave. It is covered. Now the people went home. Jeffrey said: "My mother died of sickness, there was no other harm." He said to the people: "Don't give it any thoughts, don't spread gossip all the time! It is bad gossip, stop it!"

‘Jeffrey said: “My mother died of sickness, there was no other harm.”<sup>1</sup> He said to the people: “Don’t give it any thoughts, don’t spread gossip all the time! It is bad gossip, stop it!”’

---

<sup>1</sup>The notion of “other sickness” refers to illness caused by sorcery. Many people still don’t understand the death of a person as a natural consequence of age or illness, but attribute it to the impact of man-made evil.

## **F.4 Ul ko lu**

### **Introduction**

The story *Ul ko lu* 'I cut my foot' was told by Susan Bisam from Ossima Asples in February 2000. Susan talks about cutting her foot when she stepped on a sharp bamboo in the sago swamp.

### **Summary & background**

The sago swamps are full of unpleasant and even dangerous things: an abundance of annoying insects, the large thorns of the sago palms and sharp-edged sago leaves, and pieces of bamboo. Many people walk barefoot, like Susan, because of the wet and soggy ground. Not surprisingly, you can step on thorns or other sharp objects. Some people wear rubber boots, but they are expensive and uncomfortably hot.

Figure F.1: Sago spikes

Two days after the accident, Susan came to my house, and I treated the deep cut on her foot. Fortunately, that helped. However, Susan is not a woman who likes to rest. The sago swamp is her second home. She can barely imagine a day without going there, unless she is working in her garden. In the end, she was very fortunate as the wound healed quickly.

Having gone and shoveled two baskets of sago pith, I filled the pith into the baskets for transport. One I lift up on my head, the other one I carried slung around my head. So I carried the baskets. I didn't see the bamboo. There was a big piece of bamboo on the path. I had already stretched down one of my feet. Eh, a bamboo! Srrrrrr! Eh, the blood ran! My brother's son Pita collected leaves of betel pepper. Then he heated them over the fire. He did this almost in vain. No, it didn't help. The blood was like water. The blood was just like water. I felt dizzy. I felt only dizzy. So much blood. The blood streamed only.

“Give me sago!” I said. So the people gave me sago. Having eaten some sago, my body felt stronger. But they told me: “Sit down!” I had already set down the two baskets of sago pith. My son Ayu carried them later to the kneading trough. While I was sitting, my blood stopped running. My two baskets of sago pith will be washed later. The frogs were croaking. But the bleeding didn't stop. The bamboo cut my foot severely. Finally we arrived at the house, and I went to sleep.

Wednesday morning I came here to Claudia's house. My family went to wash sago. Having washed my foot with water and soap and put on some medicine, Claudia dressed it with a bandage. She told me: "Don't go anywhere, stay in the house only! Suppose you would pound sago! The medicine I gave you is strong." If I had only listened. But I didn't listen. I didn't wash sago. I was just sitting beside the path. I waited in vain for Matias. Then I turned back home. I had come to the swamp as always. Later I met some people on the way. The people came along by accident. Having met them we all walked to the house together. Yesterday I didn't go anywhere. I rested until nightfall. Today I came here to Claudia.

*Bo kopi kuru.*

That's my story.

## F.5 Ko kipino ye

### Introduction

The story *Ko kipino ye* 'I fell on my back' was told by Susan Bisam in Ossima village in February 2006. On the way home from the sago swamp, Susan had a bad accident outside her house in Ossima Asples.

### Summary & background

Returning home from the sago swamp with two heavy baskets of sago flour, Susan fell from the platform of her house in Ossima Asples. The platform is like an open veranda without railings. When you put down a heavy load – wet sago or firewood or a basket of coconuts – you have to be careful to maintain balance. Susan was probably exhausted and wanted to quickly get rid of the load. That is how the accident happened.

Once again we see that sago processing is Susan's way of life. In her home village, she received no support from her brothers. After the death of her husband, she was living alone having to feed four children. Sago makes up a family's staple diet. This meant that Susan had to do her sago work almost every day. Only the older ones of her twelve children were able to provide for themselves in their own families.

I put the sago into the baskets, lifted them up, and carried them home on my back and slung around my forehead. I brought them to the house walking along the trail. I went up the ladder to the porch of my house. Up above I let the sago fall with an uncontrolled, jerky movement. So the sling of one of the baskets wound around my neck. I fell down from the porch along with the sago. The sling had just wound around my neck. I fell over on my back, belly upwards. My back hurt terribly. My coccyx hurt terribly. It almost broke. Rita lifted me

up. My eyes were spinning, and I felt dizzy. Two women carried me up the ladder and into the house and bedded me on my bed. With my hurting back I just cried. It was hurting terribly. I turned my back up and turned it down. Rita got a medication for my hurting back. When she brought it, I took it. Day and night my back and coccyx bones hurt badly all over. Day and night the pain in my back continued, for two months. Finally I went to the hospital in Vanim. There I got some medicine and took it. No pain anymore. The back felt alright. But as soon as I was back home in my house, my back started to hurt again.

## **F.6 Ko kau yek**

### **Introduction**

The story *Ko kau yek* ‘I chased a cow’ was told by Margaret Osi in Ossima village in February 2006. Margaret tells how she once chased a cow and hurt her arm badly.

### **Summary & background**

The Ossima Mission had an agricultural branch in order to improve nutrition and train young men in cattle breeding. There were therefore several herds of cows grazing in the immediate vicinity of the houses at Osi Camp. The fences were often broken, and the animals could roam freely. One night this happened again, and Margaret took action. She tried to chase a particular cow back beyond the fences. Unfortunately, she tripped and seriously injured her shoulder and upper arm. I was not there to witness the accident as it happened a few months before my 2006 field trip.

### **Parallel text**

*Puni ko kau yek. Ko kau isol kau rurina. Ko ba reyo. Ko dob po: Kau rurina pini, kike solo. Ko dob soreyep: “Numu de awe! Kau ruri roise kike solo. Pini. Nuko kikei.” Koyo kikoi. At night I followed a cow around. I chased a cow, a cow and its young. But I hadn’t seen the young yet. Then I noticed: a cow with its young is moving towards me. They are running. I was watching the animals as if magnetised: “Numu, come! A cow with its young is running straight towards us. It’s coming here quickly. We need to run ourselves.” We ran. Numu hid away. She sneaked through a hole in the fence. I ran and the cow ran. I slipped and fell over. I called out to Simon: “Come! Beat the cow with a stick! Help me!” My arm fell on the back. It twisted. I pondered about what to do. Then I held it with my other hand and stretched it straight. Simon has routed the cow. It has gone.

*Ko yeniyu nu. Ko asa nuem. An kopi ikoina sipip. Ko dupuniro puana, Numu muelno: "De puanap! Ko yaup yowe. De sũ mappap!" Sũ bamappeko. "Pu ipino ipiyap!" Yaup pupuol po, mol. Puliyo an kloknino. Ko puno no. Mi ko marasin kiniyo piyo. Ko yipyu wel. Rokloknino nep. An kopiro sipi as. Moni upuna.*

I called Numu: "Come! Let's go into the house."

I lay down to sleep. But I couldn't find sleep. My arm was hurting terribly. I rose in the middle of the night and said to Numu: "Get up! I'm going to boil water. You light a fire!" The fire is lit. "Now fill water in a pot!" The water became hot and boiled. I took it away from the fire with one hand. "Go get a piece of cloth," I said. Now I press a hot, wet cloth onto my arm. So the blood will flow well through the body. It will diffuse well. Then I went to bed. We two went to bed. I slept until dawn. "You light a fire again!" I said to Numu, "I'll boil water. I'll press again a hot, wet cloth onto my arm." I dipped again the piece of cloth into the hot water. I pressed the hot, wet cloth onto my shoulder. I cut my skin. The blood is transparent like water. Other blood, red blood should flow first. The light blood has flown out. No such blood anymore.

I tried to lift my arm in vain. It hurt terribly. It was tense. I couldn't put on my clothes. I had to wrap slowly a laplap.<sup>4</sup> I put it on slowly. The shoulder continued to hurt terribly. Then I went along the road to Vanimo. Me and Matyu, we walked together. Later a car of the Forest Company took both of us along. This man, who picked us up, was Joe Erima. We drove with him to the Base Camp. Then we jumped on another car. We drove, stood up again on the truck bed, and jumped

*Sele ko asa pem. Yili ko asa wilem. Due ko asa sonem, lulem. Ko yala nake solo pi. Ko wayeou ko sele pi. Pakul waliyo sipi. Dop kiniyo, dop sipiwepi. Ko nake solo pi, sipi as, upuna.*

off at Waisan Camp. There we stayed. In the morning I went to the hospital, I alone. I took a medication, a different one. I took it with water. Then I took many capsules of the medication. I took them home. I swallowed them daily. My arm didn't hurt anymore. It felt a bit better.

I can't work in the garden. I can't carry any weight. I can't pound and wash sago. Now all I do is sit idly. I tried in vain to work in the garden. My shoulder and neck hurt. The whole body hurts. My body hurts all over. If I rest only, there is no pain, it is alright.

## F.7 Yipp pol

### Introduction

The story *Yipp pol* 'The nest of a wildfowl' was told by Margaret Osi in Ossima village on August 2001. Margaret describes how the two of us search in the bush for the eggs of wildfowl.

### Summary & background

For a while now I had wanted to see a wildfowl nest in the forest. One day Margaret and I set off to find one. The villagers know about such places, of course, and Margaret knew where to go. Wild fowl eggs are a much appreciated addition to meals, especially as chicken eggs are not usually eaten but left to hatch. The location of the nest was about half an hour from the houses of Osi Camp, passing the spot where Margaret and her husband had their small bush hut. Then the track led into the forest. After a while, between the buttressed trunk of a *kwila* tree (*Intsia bijuga*), we saw the big nest of a wild fowl, which is a large ground-breeding bird.

The day before yesterday Margaret and I went to the bush. We were looking for eggs of a wild fowl. We saw a bird's nest with eggs. Now I finally saw a wildfowl's nest with eggs! With her hands, Margaret dugged for the eggs in the nest. I was sitting aside. No, I was standing and expelling the mosquitos! Then Margaret uncovered two eggs. A lizard had eaten another one. So she only dug out two. Margaret wrapped each of the two eggs of the wild fowl in a leaf. One she gave to me, one is hers. One for her, one for me. We went back home. On the way Margaret cut a *kanda-liana*. I stood aside and looked. Then she cut a walking stick for me. I crossed the water

ditch with the walking stick. Margaret crossed it without a stick. I balanced on a log. I walked with a stick. With the walking stick I came to the house and reached it. The walking stick I put into the house. It is here. I didn't throw it away.

## F.8 Ko Vanimoyo lo

### Introduction

The story *Ko Vanimoyo lo* ‘I went to Vanimo’ was told by Margaret Osi in Ossima village in March 2002. Margaret describes the hike from Ossima via Krisa to Vanimo on Wednesday-Thursday, 13-14 March 2002.

### Summary & background

The provincial capital of Vanimo is within everyone’s reach from the village of Ossima. It’s a quick journey by car with the public motor vehicle (PMV) or, while I was working on fieldwork, with Jeffrey Osi’s farm truck. The slower way is on foot over the hills of Krisa. Many of the villagers used to walk to town, and Margaret did this quite often. The purpose of the journey was both to meet relatives who lived in Vanimo and just to be in town. She wanted to experience the atmosphere of the town, a motivating factor for the trip that should not be underestimated. The walk was exhausting for Margaret who was in her sixties, but she also enjoyed it.

I went on Wednesday, at 8 o’clock. I walked. I went to Isa’s hamlet. I arrived. There I was resting. Me, Simon, Joe, the three of us were resting. Isa’s wife made sago pancakes on a baking plate. Her name is Ipp. While making the sago pancakes she cooked *tulip*-vegetable with pig and chicken. It was done. She distributed it on the plates. Having eaten we went on. We went down to Pumon creek. The country is flat, there are no hills. We went on to Pusok creek. Then we climbed up Mount Awolu. We left the mountain behind us and climbed one more mountain, Mount Oni. We arrived at a hamlet. There we were resting, in the house of Yawa and his wife.

*Uke moloro Pupualyo. Ko pulmop, Simon pulmop. Ko uro puakuyo ppuo. Koyo ilo. Pu po. Koyo pu isiye ilo. Uke ol Ayauio ippuo. Ayauio ippuo epi mono. Pu ikoiele. Koyo pu isiye iloro. Riyopuno uke basno molo Waisan Campyo. Uke mapap.*

We went down to Pupual creek. I waded through, Simon waded through. Then I climbed up the riverbank with the netbag around the head. We went on. It started to rain. We walked through the rain. We climbed Mount Ayau, but we took the trail along the flank. The rain became heavy. We walked on through the rain. We became very wet on the way. Later on the rain stopped. We went to Ulei and arrived there. Soon we left it behind and then met a man, Makoa. He was waiting for us at the road. Now the three of us continued to the village of Pasi and arrived there. Then we went on by bus to Waisan Camp. There we stayed.

## **F.9 Sû duki**

### **Introduction**

The story *Sû duki* ‘The true light’ was told by Margaret Osi in Ossima village in February 2007.

### **Summary & background**

Torches are standard equipment for people in an environment without electricity. Fancy flash lights that can be made to flicker in colour, however, are not suitable for the forest because they scare the animals even more. Margaret wanted to state that the man in the story learnt a valuable lesson.

### **Parallel text**

*Ono du puap. Puni lo, bi lipelip. Loro, du puapno. Umul nekpamu, “ko sù piye.” An seku uroyo, sù piyo. Sù bayana. Tos duki ari. Sù selayap. Sù pîpîlip. Bayana. Pili pili pîli. Pîpîlip.*

*Pial dobro riye. Tststs tststs. Bo ppu-laena. Ko ana poiipi? Riyopuno tos duki piyo. Selayap. “Eh pial, oke pial! Pial bekulu. Pial yala ko dupuesi.” Ono dikike. Epemna lo. Pe pakono neppi royepana. Uro royepanouko. An solo kike. Tos solo wel, yilauyo puni. Yena mosaupoen: “Pial ko puesiou. Koro pulo. Ko mepu po. Em le. Ko pe pakono uro neppi rapiyeke.”*

A man roamed the bush. He went at night and wanted to look for pigs. He set off and was roaming the bush. He thought: “I’ll take a light.” His hand grabbed into his netbag, and he got a light. It was a different light, not a true torch light. The light was beaming. The light was flickering. A different type of torch light. Flicker, flicker, flicker. The light flickers.

A snake directs its eyes to the light: “Tststs tststs.” A bad sound. “Who does this to me?” thinks the man. Then he took a true torch. The light spreaded: “Eh, a snake, this is a snake. A huge snake. The snake will certainly bite me.” The man must have run away. He went fast. Bow and arrows and the bush knife he put somewhere. Frustrated he also left his netbag there. He ran empty-handed. He took only the torch light, to the village, at night. He told the people: “The snake didn’t manage to bite me. I

*Punipino lo. Rapiyeko, yilauyo pulo. Barapiyeko. Yilauyo klapno nakap. Bo muelien: "Sû bayana kipiyezem! Ppulae! Sû roke imiyu pial pi. Pial yala ki riyeno sû mi dop kepso pîpîli. Pial mi yala nuko nowepi. Sû ereke layepanepiyap! Puni nuko rino mipi. Tos makiro oso poli."*

came back here. I was afraid. Tomorrow I'll go. I go to get bow and arrows, the bush knife and the netbag."

In the morning he left for the bush. So he got his things and came back to the village. He has gotten all the equipment. Havinf come to the village, he remained there. He warned the people: "Don't take the different light! It's bad! This light makes a snake hostile. While the snake looks at it, the light flickers like a snake's skin. Snakes will bite us often. Abandon this light! At night we come with a wooden torch, which is a good torch. A glowing piece of wood is much better."

<sup>7</sup>Perhaps the fancy torch light flickers like a rainbow snake’s skin.

<sup>8</sup>The “wooden torch” is a glowing stick whose light isn’t glaring.

## **F.10 Claudia ikoina nomari**

### **Introduction**

The story *Claudia ikoina nomari* 'Claudia is very sick' was told by Margaret Osi in Vanimo in September 2001. The story is about my own sickness.

### **Summary & background**

I had to see a doctor because of a severe skin rash one day. Margaret accompanied me to town. We could travel in a four-seater Cessna aircraft. It was Margaret's first time on a plane, which is why everyone in town was surprised to suddenly see her there. We stayed in the bishop's guest house, where my family and I would normally sleep when we stayed in Vanimo. At times, our daughter Eva would stay with lay missionary friends in Lote, a mission village on a promontory a few kilometres west of Vanimo.

The story is told from different perspectives. It begins from my perspective. And then Margaret continues from her perspective.

### **Parallel text**

*Ko Eva muelno: "De inalap! Margaret muelkenap: Ko de same. Epe kopi de muli. Awe!" "Bubu de puanap! De inalap! Claudia de muli." Riyopuno ko pulo. Ko de reyo. "Margaret ko sialipo. Ko le haus sikyo Vanimoyo. Nuko ile. De mini, de muli?" Ko umul nek. Ko umul nekpe. "Ko kaikai bapiyeko. Yena due kopi sini. Luo kiniyo ko bapakok. Kaikai kopi ko David ponamo. Upunaro. Apoliwe. Nuko ile, ko mini."*

*"Ko am ba saupi. Ko am ba malo. Nuko auno mole, nuko opono mole?" Riyopuno nuko au lewone. Au amapuleipe.*

I said to Eva: "Hurry up! Go tell Margaret: 'I am asking you something. My mother wants you. Come!'" Eva told her: "Grandmother, get up! Hurry up! Claudia wants you!" Then Margaret came and saw Claudia. "Margaret, I got a rash. I'll go to the hospital, to Vanimo. Let's go. Will you come, do you agree?" I thought about it. First I wanted to think about it: "I have bought food. The people should pound sago pith for me. All the money I have flung away. My food I gave to my son David. But alright, be it as it is. Let's go. I'll come with you."

Claudia said: "I don't know yet, I didn't hear it yet. Will we go by plane, or will we go by car?" Eventu-

*Au pule. Au seku ples balusyo. Au liki kepyo seku. Le royepanepo balus biyo. Riyo-puno de Kevin sano: "De wepulo sia fopela?" Kevin muelno: "Ou, ko wepulo, ou. Uke ronpua ronpua." Nuko lupuanepo, bili musi. Ensin kep po. Au puana, wariye, au lo nuko roise. Vani-moyo seku.*

ally we waited for the plane, it still had to come. The plane was coming. The plane landed on the airstrip. The plane landed on its landing place. We put our luggage inside the plane. Then you asked Kevin: "Did you bring four seats?" Kevin replied: "Yes, I brought them, yes. We are four." We entered the plane and the door closes. Its engine started, the plane rose, it is flying. The plane went with us and landed in Vanimo.

After landing we went to the hospital. You saw a doctor. He examined your skin and said to you: "You sweat badly. I will make a blood test." Then he gives you some medicine. For four days. The doctor said to you: "You take the medicine like this. Friday you come again. I need to see you. I'll see your sores. Are they dry or not? If there is no liquid and they are dry, in that case it is alright. If there is still liquid and they are not dry, then you take a different medicine."

The people in town asked me: "Where did you come from? When did you come?" I replied: "Claudia and me came by plane, Claudia together with her husband and child. We came to the hospital to see a doctor. There are sores on her arms and legs." Well, we stayed on, the three of us. Eva was staying in Lote. Only we three are in town. I hide the news that we are here for outpatient treatment. I don't talk about the fact that we are staying in that house. No, no, I hide the news

*Yena ko saipop: "Ine mono mole?" "Ko ar saupi uke sarerenomolam? Dokta am ar mueli. Am bo malomaye. Aepu kep am ar sui. Yala asa muelnam bo. Yala uke opono molam yala uke auno molam." Yena mi ko saipop: "De eska pulo, de eska pulo?"*

as mine. The house doesn't belong to us. It is the bishop's house. Were it our house or yours, then alright, the people may come to visit us.

The people kept asking me: "When will you go back?" I replied: "I don't know, maybe we'll leave on Saturday. The doctor doesn't say it yet. We have still to listen to his words. Her sores aren't healed yet. He cannot say anything for sure. We might go by car, we might go by plane." Other people kept asking me: "When did you come? When did you come?"

## F.11 Bo Milipiro

### Introduction

The story *Bo Milipiro* ‘Mili’s sickness’ was told by Margaret Osi in Ossima village in January 2007. Mili is Margaret Osi’s five year old granddaughter who had to undergo an operation at Vanimo hospital.

### Summary & background

At one point, Mili, the daughter of Charles Osi and his wife Imelda, had to be taken to the hospital in Vanimo for treatment. She was suffering from a serious wound that could not be treated in the village of Ossima. It was not clear what the cause of this severe, ulcerated wound was. Mili’s mother could not accompany her because of their other four children. So Margaret Osi went to the hospital together with Mili and stayed with her during the long weeks of treatment. After the ulcer had been successfully excised, a skin transfer was necessary. The doctor removed a piece of skin from Mili’s thigh.

Ulcerating infections under the skin are quite common in the forest. Some of them heal on their own. Others can be cured with a special antibiotic. If such medication is not available, the inflammation may become so severe that a sepsis is possible. Then an operation is required.

### Parallel text

*Ai Milipi yilauyo pulo. Opono pulo, lakiyoko, woko Vanimoyo. Ko muelpup: “Epee, de ruri kopi wokap haus sikyo! Aepu ikoina pi. Aepu kana po.” Dokta muelien: “Deyo yala haus sikyo wonake. Aepu bueyo pusiye kap!” Ko Mili wepulo. Marasin pono aepuyo, lolono, dokta muelo: “Fonde operesenyio le, de ni kepem! De yala lam.” Fonde punipino tenklokno lo. Aepu dükû ikoiele. Dokta kiniyo riyemayo. Ppulae, sut ponamo. Yeniyo wenepu. Nanayo puenpo, sesiye-piyo. Aepu ppulae puppuli polip. Marasin pono, aepuyo lolono. Mili wemipu*

Mili’s father came to the village. He came by car, picked Mili up and brought her to Vanimo. He said to me: “Mother, accompany my child to the hospital! The ulcer is big, it grew very fast.” After Mili’s examination the doctor said to us: “The two of you stay together in the hospital now. But first you go and wash the ulcer in the sea!” Then I brought Mili back to the ward. She got medicine on the ulcer, and it was dressed. The doctor said to her: “Thursday you undergo the surgery. You must not eat anything,

*yeniyo, yeni koyopi. Yeniyo nuweikûpu. Yeniyo nuip aua klokni. Riyopuno puana, ko muelpup: "Bubu, ko ni muli." Nes: "Kenem, umul maki amapoipe!" "Bubu, ko el sui, ni muli!" Ko ni ponamo, ya yûr dû yûr su roise. No. Ya kesiyo.*

*Aepu ikil am poli, puppuli polip. Tunde seken operesen lo. Nanano puenpo, sesiyepiyo, aepu suelpiyo. Lolono, wemipu yeniyo. Wemipu yeniyo nuweikûpu. you just come." Thursday morning at 10 o'clock she went to the treatment room. The ulcer smelled strongly. The doctor looked carefully at everything. It looked bad. He gave her an injection. The nurses carried her to the operation table. The doctor cut with a lancet. He cut the ulcer out. The ulcer is bad. There were depositions of fat. He put medicine on the ulcer and dressed it. Then they brought Mili to her bed, to our bed. They laid her down on the bed. She was sleeping for one hour. Then she woke up and said to me: "Granny, I want to eat." The nurse said: "She must not eat! First her mind should be clear." After a while Mili said again: "Granny, I am hungry and want to eat." I gave her some food, sago with chicken meat and eggs. She ate. She finished the sago.

The ulcer was still dirty. There were still depositions of fat. On Tuesday she underwent the second surgery. The doctor cut with a small knife, cut along the ulcer, and excised it. He dressed her wound. Then they brought her here to her bed. They brought her here and laid her down on the bed. She slept for one hour and was talking confused things: "I eat faeces, spread a cloth! Put it on my behind." She woke up: "I go to my father." She slept again and was sound asleep. Then she woke up again: "Granny, I am hungry, I do eat." She quit babbling nonsense. It had come to an end. Her head was fine. "Give me something to

eat!” repeated Mili. I gave her fish and eggs with sago. She has eaten it up. She finished all the food.

We remained staying together. Many people were staying in the surgery ward. For two months, the nurses just kept dressing Mili’s ulcer. They redressed the ulcer again and again. They kept dressing it. One day the doctor examined her wound again: “Your ulcer is good. It has become like sound flesh. It is red, with straight closing edges.” The doctor said to her: “Before you go home, I’ll check your blood.” There aren’t enough red blood cells. Doctor Wi sent me for a blood sample: “Please follow me kindly to check your blood. In case it is like Mili’s, alright. Only to check it, let’s go.” The doctor checked my blood for Mili’s benefit. He took some blood. Then he checked her father Charles’s blood: “Your blood is alright, it is like Mili’s.” So they brought blood of him in order to infuse it Mili. Mili lay on the bed. They prepared the blood transfusion. The blood entered through the needle and flowed through the blood vessel. There was a metal stand. The nurse hung the blood bag there. The blood went into Mili’s body. Mili was staying like this; the blood was flowing. It has still to be used up. Now it is used up. No blood is left in the bag. The nurse took away the needle and pressed a bandage on the crook of her arm. Now the blood won’t come out.

*Koyo inakap, Dokta muelien: "De opereseny le. Ko dop pili depi srene. Pili monina srene aepuyo pi. Aepuyo panapne." Mili replied: "Ko ba muli!" "De lap! De epemna upuna lam!" De yilauyo lap! Deyo yilauyo ilap!"*

The two of us stayed on. The doctor informed us: "You need to undergo a further surgery. I will scrape off a piece of skin from you. Scrape off a small piece and put it on the ulcer. I'll put it on the ulcer for you to let it heal completely." Mili replied: "I don't want to." Doctor Wi repeated: "You go, please you should go quickly." She thought about it: "I will go for the surgery." She went into the treatment pavilion. They gave her an injection. She fell asleep. Two nurses, no, a nurse and a doctor each called her. She didn't answer. They undressed the ulcer and washed it. The ulcer is good. The doctor scraped off a piece of skin from her thigh and put it on the wound. Then they dressed her ulcer and dressed her thigh. The nurse brought her to the bed. One nurse laid her down before she slept for a long time. She awoke: "I am hungry and want to eat." I gave her sago with eggs and fish. She finished the food. Later I said to the nurse: "Her ulcer hurts, you dressed it tightly. It held too tightly, please take off her bandage!" The nurse listened to me. She redressed her wound carefully. Alright, it doesn't hurt anymore. No hurting ulcer. Soon the nurse said to us: "Seven days!" So we stayed on for seven more days. "Mili, come, we'll undress your ulcer!" Having undressed it, they looked thoroughly at her wound: "Your ulcer is healing well." They washed the edges of her ulcer, pressed medicine upon the

wound, and redressed it for her. We went back to our bed and were staying on, until Doctor Wi came: "The two of you will leave on Friday." Some days later he came and said: "You leave now, it is finished. Go to your village! You two may return to the village!"

We went to Waisan Camp and were staying there for two days. Mili's father hired a car, and Mili went back to the village first. I went later, three days later. Theresia and me went on a big truck. Simon picked us up. At the junction he let us off, and we went by foot until night. We called out for Jerry, my brother. We were staying in his village and slept there, in his house. His wife cooked chicken, and she cooked bananas. There was no sago. We ate the chicken with bananas. We all slept. Then the rooster crowed. Birds called "kukukuku", the wild fowl called "nananana", other birds called "kopokopo lolololo". It was dawn. We rose from sleep. Jerry's wife lit a fire and cooked bananas. In a pot she cooked eel and possum. She took it off the fire. She put the cooked food aside with the pot. The heat still lasted. The heat has ceased. She served it in a dish. She gave some to me and gave some to Theresia. We ate possum and eel with bananas, me and Theresia together with her child Joanna. Having eaten we walked along the trail. We went to the Pual river and forded it. When we had crossed, we were sitting a while and

ate bananas. Then we walked on to our village. We walked to the village of Ossima and arrived there.

*Bo kuru.*

The story is finished.

# G Episodes of Daily Life

This chapter features a loose collection of short texts, some of which are no longer than two sentences. They constitute colloquial Kilmeri speech that was not prompted by me. Margaret Osi, the author, speaks her mind freely. Here we get to witness her perception and interpretation of the world vibrating around her.

Some of these texts contribute to the understanding of Kilmeri social life today (Texts G.1, G.3, G.11, G.15, G.19). Other texts revolve around the themes of gardening, sago work, and hunting (Texts G.2, G.7, G.9, G.10, G.12, G.13, G.14, G.16, G.18, G.20). Also included are texts that express Margaret Osi's personal moods, which she wanted to share with me (Texts G.4, G.5, G.6, G.8, G.17).

I am just as grateful for these short texts as I am for the many long texts. They round off the picture of Margaret Osi's personality, who was indeed an outstanding woman. The reader may enjoy reading these episodes in special memory of her. She was well aware of the fact that her language and culture could not stand up to the developments of modern times, which have completely changed people's lives.

## G.1 Ko Greenyo lo

### Introduction

The text *Ko Greenyo lo* 'I went to Green' was narrated by Margaret Osi in Vanimö in March 2002.

### Summary & background

The village of Green is the site of Green River High School in the Upper Sepik region, where Margaret's daughter Grace went to school after finishing 6th grade. Green River High School is a boarding school. However, students are expected to bring some food as school supplies are limited. Packages would sometimes be sent, but every now and then a family member would bring in some food. Margaret was fortunate to get a free flight to Green. For her this was a fantastic

experience. For the first time, she saw the mountains from above. Her daughter Grace almost couldn't believe she was seeing her mother on the school grounds. However, this brief reunion is not part of the story. On the return flight to Ossima, the fog lifted.

### Parallel text

*Ko loro Greenyo. Ol ba ikoiele! Ko ermue riyo. Ko ermue pulo Greenyo. Kukûnapno dob riyo pu po. Ru ikoiele po. Ol sowelayo. Dob ko asa riyem. Ko ru solo riyo. Yelo ko ar riyo. Ru solo poli. Ri kiniyo sowo, app. Ru kiniyo sowo.*

I really went to Green. Such big mountains! I saw them for the first time. I came to Green for the first time. When the plane had gone down I saw that it rained. There was dense fog. It covered up the mountains. I couldn't see anything. I saw only fog. I didn't see the ground. There was only fog. It covered all the trees and the sky. Fog covered everything.

*Au epi baka wiako. Au epi baka wi. Dob riyo ru epemna lo. Nini Ossimaka pulip.*

The plane turned down to one side. Then it turned to the other side. Later I saw that the fog was lifting quickly. The sun was shining in the direction of Ossima.

## G.2 Ri ini piowemon

### Introduction

The text *Ri ini piowemon* ‘A branch hit me’ was narrated by Margaret Osi in Vanimó in March 2000.

### Summary & background

Margaret had bad luck one day while working in her garden. She was trying to cut a branch from a tree that had already been felled. Unfortunately, the branch hit her on the forehead and caused a bruise. She must have been terrified by the accident because later she told me that she could just as easily have been killed. A bush knife is certainly not the best tool for chopping thick branches, but she had no axe at her disposal.

I went to the garden. I was working in the garden. I was hewing off branches of a tree, a *ton*-tree. I was hewing off a branch of a *ton*-tree. I was hewing it off with the bush knife. One end of a branch I hold firmly with my foot. But the other end flipped against me. The branch hit and injured my head. I must have turned away. Then my forehead swelled up. If the branch had hit my face, then I would have died. Later on you would have come and asked David: “Margaret isn’t there?” David had replied: “Margaret died. We buried her in a grave.”

## G.3 Ko mimaripi

### Introduction

The text *Ko mimaripi* 'I am sick again' was narrated by Margaret Osi in Ossima village in January 2007.

### Summary & background

Margaret often struggled to do her garden work. She loved this work, but was soon exhausted. Margaret suffered from various pains, especially after the accident with the cow (Text F.6). In such situations she felt somehow betrayed by her sons who did not support her properly. During my stays in field, her situation was improved because we shared all meals. I cooked rice for breakfast. We had a cup of tea and a nice bowl of rice with bananas or sugar every day before the language sessions. She loved starting the day that way.

### Parallel text

## G.4 Ko yeriyo

### Introduction

The text *Ko yeriyo* 'I was dreaming' was narrated by Margaret Osi in Ossima village in February 2007.

### Summary & background

Every now and then Margaret would share a dream she had dreamed the previous night. This time, she dreamed of me and my daughter Eva. Though she was sure the scene of the dream was in my country, the setting resembled the upper reaches of the Puwani River. Margaret mentions a second child who is probably a friend of Eva's who had visited us in Ossima a few years ago. Just like Eva, this girl had beautiful, curly, light-coloured hair. And Margaret always admired that kind of hair.

### Parallel text

*Ko deyo reyanawe yilau depiyo. Pu ikoiele, luo ikoi ulap. Eva ruwaesi ba roise pu epiyo ikûn deyo. Dob pokûnep olyo pokûnep. Ol ineipi. Ko luoyo nakap puyo. Sû pulip. Ko riyo nakap. I met you two at your place. There was a very big river with big rocks. Eva and another small child went down along the river edge towards you. They were looking down, looking down here from the riverbank. They walked downriver along the bank. I was sitting on a rock in the river. A light was shining. I was sitting there. Eva brought an unknown child to me. I looked at her: "This child which you brought, whose child is it?" Eva replied: "I brought my uncle's child." A beautiful child. A beautiful girl. I was still sitting on a plank. A light burns, it was shining brightly. I was jealous. What a pretty girl, her hair is nice! I am looking upriver, I am looking downriver. Big rocks spread over the landscape, and there were big mountains. I woke up again. The dream is over.

## G.5 Pupi kwerno

### Introduction

The text *Pupi kwerno* ‘The wind in the afternoon’ was narrated by Margaret Osi in Ossima village in February 2006.

### Summary & background

This text shows Margaret’s sensitivity to the atmosphere of an afternoon when everyone is out in their gardens, and all is very quiet. When she started to speak, it almost sounded like a poem. She speaks of the peacefulness of life and nature. The harshness of daily labour seems to have vanished. There is only the presence of silence.

### Parallel text

## G.6 *Pu du*

### Introduction

The text *Pu du* ‘A short rainstorm’ was narrated by Margaret Osi in Ossima village in February 2007.

### Summary & background

Margaret spoke these words as we watched an approaching storm. As it rained, Margaret commented on the wind and rain. Although the scene is not unusual, Margaret was intrigued. People react particularly to the dark sky and heavy air during rainy days. That is when one often overhears the compound *pudu* ‘rain darkness’. The atmosphere is entirely different from the bright sun or the light clouds that villagers perceive as perfectly normal.

### Parallel text

## G.7 *Pu malapi*

### Introduction

The text *Pu malapi* ‘Water levels’ was narrated by Margaret Osi in Ossima village in August 2004.

### Summary & background

Margaret talks about the water level in the sago swamps, which is important for the processing of sago. If the water level drops too low, the sago swamps almost dry up, and processing sago is no longer possible. It is therefore important to check the water level. It is impossible to do this with the naked eye because the water in the swamp is nearly black.

## G.8 Wolmoyo koliye

### Introduction

The text *Wolmoyo koliye* ‘Hanging up the washed clothes’ was narrated by Margaret Osi in Ossima village in February 2007.

### Summary & background

I had washed some clothes and wanted to dry them on the clothesline outside the house. Usually this is the best way to dry clothes. But on this day, strangely enough, the weather was changing at very short time intervals. Having watched me for a while, Margaret slipped into character and began making fun of me by talking about my situation using the first-person.

### Parallel text

*Mi ko le piyowe. Mi ko rowekûne yeloka. Wolmo bayo koliye, yeloyo polino. Mi ko yipyô ipîpî. Yipyô nake. Yala pu pem. Mi ko ipake. Mi ko le piyeke. Mi ko wepini yipyô. Koliyewe. Mi ko nake. Nini yala pulem. Mi ko rowekûne, koliyewe. Ko mipini yipyô. Ko eku nake. Oh! Yala pu poro! Nini ar puli. Mi ko piyeke, wepini. Pu pi. Ko due nui.*

I am taking the washed things again, carry them down outside again, and hang them on the other clothes line, which is outside the house. Then I climb up the stairs into the house and sit there again. Oh, it may rain now! Again I climb down, go take the laundry, carry them up here into the house, hang them on the indoor line, and sit down again. Suddenly it seems to get sunny. Again I carry the things down and hang them. Again I come up here into the house and sit down to rest. Oh, now it is raining! The sun doesn't shine any longer. I go again to take the clothes and carry them up here. It rains. I'll sleep.

## G.9 Kau susup nonake

### Introduction

The text *Kau susup nonake* ‘The cows eat grass all day’ was narrated by Margaret Osi in Ossima village in January 2007.

### Summary & background

Margaret describes the idleness of the cows, who do no more than eat grass. In Ossima and the neighbouring villages, cows were widespread and were part of the villagers’ daily lives. They were introduced by the mission’s farm administration in the 1960s. Right behind the houses of Osi Camp, where I lived, a herd of cows was seeking shade under the trees in the heat of the day.

## G.10 Yem re

### Introduction

The text *Yem re* 'The crest of the crowned pidgeon' was narrated by Margaret Osi in Ossima village in February 2007.

### Summary & background

Margaret comments on the beautiful plumage of the crowned pigeon (*Goura victoria*), which is endemic to northern New Guinea. Crowned pigeons used to be common in the forests of the Kilmeri region. They are large and beautiful birds. They were and still are hunted for their meat and their feathers. A crowned pigeon can provide almost twice as much meat as a chicken. Margaret once told me that one of her relatives shot a ground pigeon. She thought it was a good catch because it was a good meal and because it brought back her memories of the past.

In the following text, Margaret took the opportunity to talk about the appearance, beauty, and also the delicious meat of ground pigeons.

### Parallel text

*Yem riyo wariyepue. Ri iniyo nakeko, re kep supuaspi. Yem ili kep puakuyo poli. Yem re lepapouli. Yem re boli sikero poli. Boli kep ar lipiyo, ar lepapo. Epi kep solo lepapouli. Puaku re ba sumi ba ilei. Yem re ri ppi peso. Yem re puaku pili roise sesiyepiye. Ko yem re sekeyo papi.*

The crowned pigeon flies up into a tree. After alighting on a branch the feathers of its crown wobble. The crowned pigeon has a crest on its head. The feathers of the crowned pigeon have a pattern. The quills of the crowned pigeon are strong; they have no colour and no pattern. Only its side has a pattern. Some of the head feathers are short, some are long. The crest of the crowned pigeon looks like a flower of a tree. One cuts off the crowned pigeon's crest feathers together with some skin of the head. I prepare the crest of the crowned pigeon as adornment for my hair.

*Yem ikoiele. Dop kep dû roise kakarukso pari.*

The crowned pigeon is very big. Its body and meat aren't like that of a chicken, but weigh substantially more.

## G.11 Rap

### Introduction

The text *Rap* ‘The raft’ was narrated by Margaret Osi in Ossima village in April 2002.

### Summary & background

For several years, Margaret Uma, a distant relative of Jeffrey Osi, had her house in Osi Camp. The family previously lived in Osol, but had run into difficulties there. Jeffrey Osi wanted the woman and her family to move to his land, but they were not welcomed by the villagers and neighbours. When I returned to fieldwork one year, the house was no longer there. Margaret Osi told me that it had been deliberately burnt down. So the family left the place.

In order to make some money, people would produce sago for the market in Vanimo. Sometimes the roads to Vanimo were in such a bad condition that travelling by car was not possible. People would then build rafts and travel down the Puwani to the shore, where they could find a car. This was the plan of Joe, Margaret Uma’s husband. He was not experienced in navigating a raft on the river and did not know his way around hidden rocks and driftwood. As a result, he lost all the sago that his wife had prepared for sale in Vanimo.

### Parallel text

Margaret Uma pounded sago pith quite quickly. Her husband Joe took the sago. He carried a lot of sago and transported it by raft. Her husband transported it by raft. Unfortunately all the sago bags tipped over into the river. Her husband went empty-handed. There was no sago left on the raft. The river took the sago. The river carried the sago away. Joe didn’t navigate the raft well. It bumped against a tree or bumped against a rock. Then all the sago bags fell down into the water.

## G.12 Uki kopi bi lui

### Introduction

The text *Uki kopi bi lui* ‘My husband goes hunting’ was narrated by Margaret Osi in Ossima village in September 2004.

### Summary & background

Margaret often wanted to reminisce about what a good hunter her husband Lis Osi had been. These days in the forest were something special for the whole family. As well as building up supplies, such days also meant an abundance of food. The meat of the small animals would be eaten directly in the bush camp. She remembers hunting days that took place in the bush section called Diyewi (Text A.2, Sequence 11).

## G.13 *Bras wiye*

### Introduction

The text *Bras wiye* ‘Catching bandicoots’ was narrated by Margaret Osi in Ossima village in September 2000.

### Summary & background

When cleaning and weeding around my house, people scared two bandicoots and captured them, a male and a juvenile. Bandicoots are common, and they are easy to catch. The Kilmeri distinguish (at least) five species of bandicoots. One of them lives in the forest, the others in the undergrowth and shrubs around houses. They can often also be caught near one’s house. The following short text briefly describes how to catch bandicoots and how to prepare them for a meal. The dried meat of bandicoots is sold in the village market in Ossima (Fig. G.3).

Figure G.3: Selling smoked bandicoot meat in the market.

## G.14 *Bi sele mini*

### Introduction

The text *Bi sele mini* 'Pigs come into the gardens' was narrated by Margaret Osi in Ossima village in January 2007.

Figure G.4: Taro patch

### Summary & background

The forest in the Kilmeri region is the habitat of wild boars. On the one hand, they are prized for hunting. On the other hand, they are invaders in the gardens of humans. At times it is hard to keep them out. At worst, they can destroy an entire taro patch. In order to prevent this, one must make regular visits to the gardens and light fires. Pigs are quite shy and avoid human presence. In her description of the pigs' behaviour, Margaret's mention of a sorcerer seems unmotivated. Sorcerers attack humans, but not animals or plants.

### Parallel text

## G.15 Ono basuiko

### Introduction

The text *Ono basuiko* ‘A man has died’ was narrated by Margaret Osi in Ossima village in February 2006.

### Summary & background

The text describes a rather unusual incident: a man dies unexpectedly in his home. Nobody had expected it. The death was not blamed on sorcery because there were no previous signs of some serious illness at the time. The man had simply died in his sleep. People were shocked when they found out the next morning. The relatives were summoned to the house of the deceased for a mourning ritual. The relatives who attended the ritual, were listed according to their unique names. Once the mourning ritual was over, the guests were dismissed. The phrase *ine mole* ‘You are all leaving’ is the usual formula for dismissing visitors (cf. Gerstner-Link 2018: 143). It can be reinforced by the terminative suffix *-we*, which here indicates that people should return to their daily routine.

### Parallel text

## G.16 Walpop susi

### Introduction

The text *Walpop susi* ‘The turtle wriggles.’ was narrated by Margaret Osi in Os-sima village in February 2006.

### Summary & background

For the Kilmeri people, freshwater turtles are part of their diet. However, it seems that not many turtles are left in the streams and waterholes. Only every now and then someone catches one. Since the animals are quite small, the quantity of meat is also quite small. In fact, it is only the limbs and the neck with the head that provide meat. When a turtle is caught, it is hung upside down on a fishing line until it dies. This took place in Rose Osi’s kitchen house.

### Parallel text

## G.17 Apa

### Introduction

The text *Apa* ‘Moths’ was narrated by Margaret Osi in Ossima village in January 2007.

### Summary & background

Sometimes Margaret would watch little critters in my house. Such relaxed moments were a good break from the language work and helped to keep an air of enjoyment around my sometimes difficult grammatical and lexical questions. And Margaret enjoyed it. She was comfortable in her plastic chair and enjoyed looking around. As a field researcher, her comments were often the source of some unexpected insights and discoveries.

## G.18 *Ri mapp*

### Introduction

The text *Ri mapp* ‘Frangipani trees’ was narrated by Margaret Osi in Ossima village in February 2006.

### Summary & background

The milky sap of the frangipani trees (*Plumeria* sp.) contains a caustic irritant which is used to catch fish. Margaret always told me about these local customs whenever we went for a walk together.

*Plumeria* is native to tropical America. Its main centre is the island of Cuba where there are ten endemic species. The tree with its marvellous, often fragrant flowers was introduced to Hawaii in 1860 and subsequently cultivated there. Today it is widespread in the Pacific Islands.

## G.19 Luo aska

### Introduction

The text *Luo aska* ‘No money’ was narrated by Margaret Osi in Ossima village in February 2007.

### Summary & background

Money began to play a major role in everyday life in the first decade of the 21st century. Beyond subsistence, people desired goods that were only obtainable in exchange for money. Alternatively, they had to pay others who were no longer willing to exchange natural goods. The value of money was evident to everyone. I remember a situation when I gave two kina to our neighbour’s son, who was about ten years old, to help me with some odd jobs. He could hardly believe that he had earned money.

As for Margaret, she was always more than happy when I paid her for our daily language sessions. However, this sporadic and small income was not her sole source of income. She could rely on some royalties from the timber business in the Kilmeri area (see Gerstner-Link 2018: 9-11). Still, she would sometimes say that she run out of money. She sighed and complained about her sons in particularly.

### Parallel text

*Uro kopi bî solo. Moni as. Moni ke miro ko bapapko? Le ko barapiyeko. Ko luo aska. Ko an solo nake. Yala ko asa pi? Ko umul nekpanepi. Yala ko bîyo piye?*

## G.20 Ko pewo yasiye

### Introduction

The text *Ko pewo yasiye* ‘Planting bananas’ was narrated by Margaret Osi in Ossima village in August 2001.

### Summary & background

Every garden has a patch of bananas. People usually plant not just one variety, but different types of banana. They always had bananas for cooking and some sweet bananas for eating. There is often a further banana patch right next to the house. I once helped Margaret plant banana sprouts, which she recalls here. (See also Gerstner-Link forthcoming, for the different types of *Musa* that are known and cultivated by the Kilmeri).

### Parallel text

*Ko yelo bî rarari. Ko pewo dui yasiye. Bî sowe. Ko bayasiyeko. Ko pewo dui anno wiyowe. De yelo sowap. Ko dorno piyelayo. Ko pewo dui kiniyo meli sele pueneyo.*

I dig some holes into the ground. I put the banana shoots in there and cover the holes. I have planted the bananas. Once I held the banana shoot with my hands and you were covering them with soil. Then I trampled the ground. I carry many banana shoots to the new garden patch.

# Clans, spirits, land and food

This collection of Kilmeri texts provides insight into the language and culture of the Kilmeri people in northern Papua New Guinea. Six narrators tell stories about their clans, their land, and its food supply during the 'golden age' as well as today. Life in the bush is never easy, as evil spirits often hinder people's efforts to find food. Readers will be introduced to a variety of genres, including legendary deeds of Kilmeri heroes, old village life, contemporary village life, and other oral traditions. All texts are presented in a parallel text version (Kilmeri-English) and in an interlinearised version. Each text is preceded by an introduction that describes the anthropological background and context of the story.
